Comparison of ticagrelor compared to clopidogrel, i.e. values below 1.00 indicate lower risk of the outcome with ticagrelor than clopidogrel. Statistically significant results are shown in bold text.

^aThis analysis did not distinguish regarding time of the switch relative to the outcome event (i.e. this analysis excludes participants who switched P2Y₁₂ inhibitors subsequent to an outcome event).

aHR compares ticagrelor to clopidogrel (reference group) using adjusted model 2 in Table 2.

aHR: Adjusted hazard ratio; eGFR: Estimated glomerular filtration rate; MACE: Major adverse coronary event; PLATO: Platelet Inhibition and Patient Outcomes; TIMI: Thrombolysis in Myocardial Infarction.
