

Fig. S2

**Supplementary Figure S2. Host range of bacteria *Sinorhizobium meliloti* ORT11 to phages P\_ort11, M\_ort18, M\_sf1.2, and I\_sf3.21.** Bacterial lawns were propagated by adding 200  $\mu$ l of overnight culture to the 0.4% (wt/v) top-TY agar and pouring onto a solid TY plate. After 15 min, 10  $\mu$ l of droplets of lysates were added without dilute (A), 10 times diluted (B), and 100 times diluted (C). Plates were incubated 2 days at 28°C for the presence of lysis plaques
