

Additional file 9: Clinical site effect

Figure S9.1 Performance by clinical site of the relapse model. Prediction performance of the relapse model for all clinical sites, measured by the negative log-likelihood. For every site, a boxplot of negative log-likelihoods for the patients being part of the site is shown. Numbers in brackets indicate the number of patients for a given clinical site.

Figure S9.2 Performance by clinical site of the CDP model. Prediction performance of the CDP model for all clinical sites, measured by the negative log-likelihood. For every site, a boxplot of negative log-likelihoods for the patients being part of the site is shown. Numbers in brackets indicate the number of patients for a given clinical site.
