

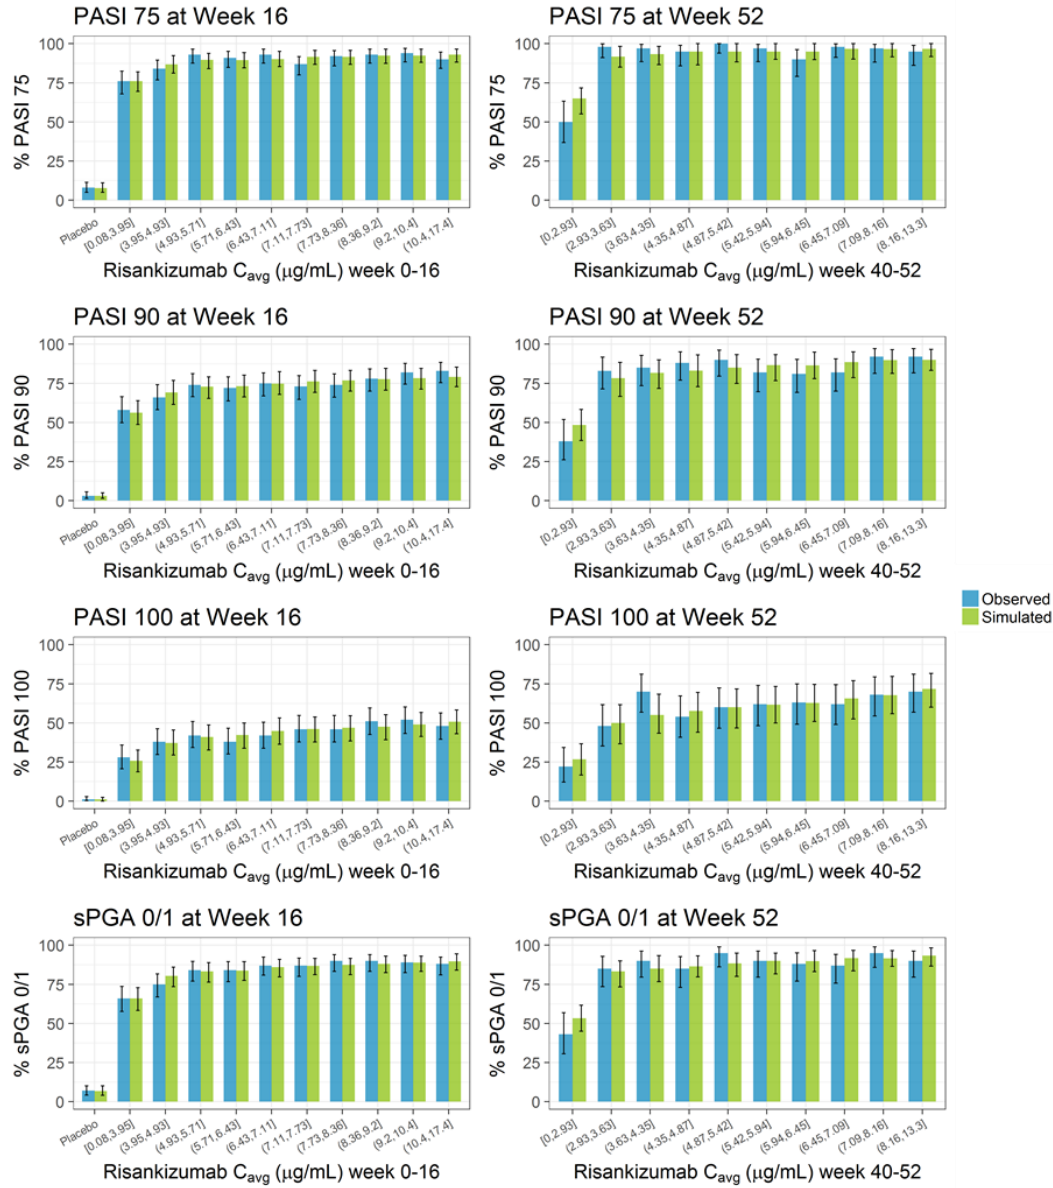

Figure S2. Graphical comparison of observed and model-predicted probability of PASI and sPGA endpoints at weeks 16 and 52 based on analyses of the Phase 2 and 3 trials

Blue bars and their errors: Observed PASI75, PASI90, PASI100 or sPGA0/1 response and corresponding 95% exact binomial confidence intervals.

Green bars and their errors: Simulated proportion of responders (median) and their 95% prediction interval (2.5th and 97.5th percentiles) calculated based on 1000 simulation replicates.
