Table of content:

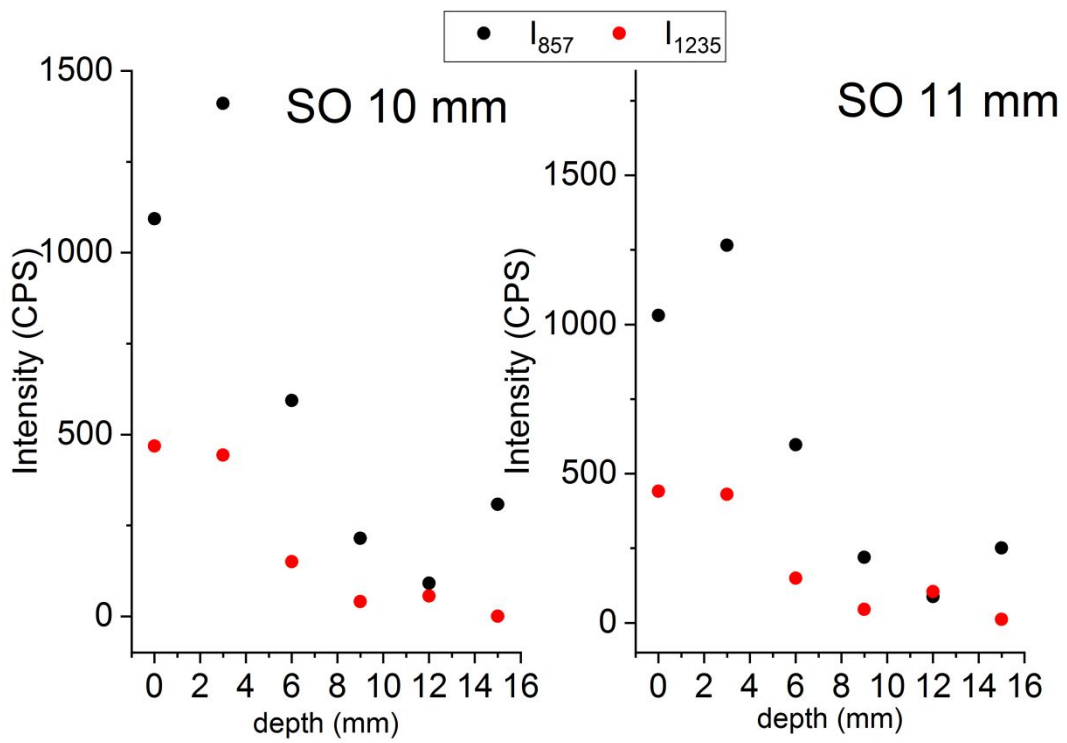

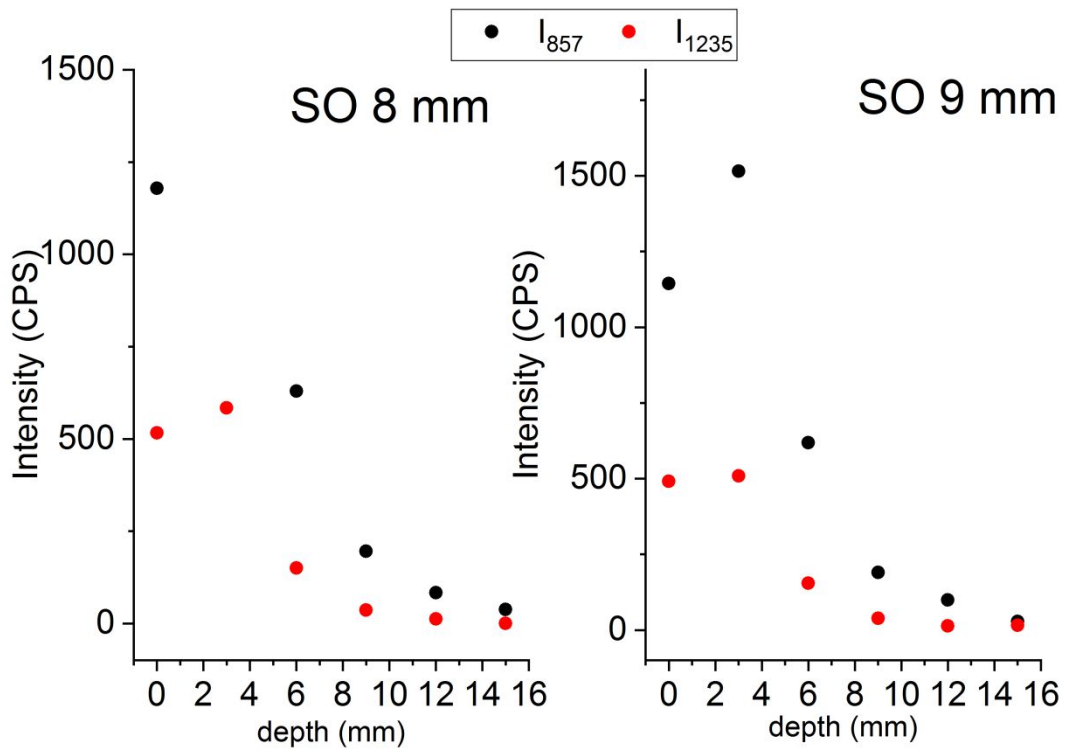

- | | |
|---|-----|
| 1. Raman intensities of paracetamol peaks | S-2 |
| 2. Calibration curve | S-4 |

1. Raman intensities of paracetamol peaks

The absolute Raman intensity of the paracetamol peaks (857 cm^{-1} black, 1235 cm^{-1} red) at depth in the PE matrix collected with a SORS spatial offset $SO = 1$ to 12 mm and with TRS geometry.

2. Calibration curve

Equations ($y=a+ bx$) obtained by a linear fit of the natural logarithm of the 857-to-1235 cm^{-1} ratio versus depth of inclusion in the turbid matrix. Standard error (σ) and R^2 statistical value are reported in column

Spatial offset (mm)	a, Intercept		b, Slope		R ²
	Value	Standard Error(σ)	Value	Standard Error(σ)	Regression coefficient
0	0.83603	0.07154	0.0912	0.01275	0.9436
