

Table S1. PCR primers used for qRT-PCR assays.

Gene name	Forward primer (5'-3')	Reverse primer (5'-3')
<i>γ-ECS</i>	TGAAGACACCATTCGAGAC	ACACCTGTTCTAACCACCTC
<i>GSHS</i>	CTTATGAAGGTGGAGTTTTGCC	GCCTCTTTTCTTCTTTCACTGG
<i>hGSHS</i>	ACCTTTGACCACCAACTCTG	CACCCTTGCTTCCAATGACT
<i>Actin11</i>	CGGTGGTTCTATCTTGGCATC	CGGTGGTTCTATCTTGGCATC

Figure S1. Number of nematodes inside the roots of the (h)GSH-depleted and control plants at 5 d post-inoculation (dpi). Data (nematodes from 15 plants produced in three different biological experiments) are represented by mean \pm standard error. * indicates a statistically significant difference ($P < 0.05$).
