Supplementary Figure 1

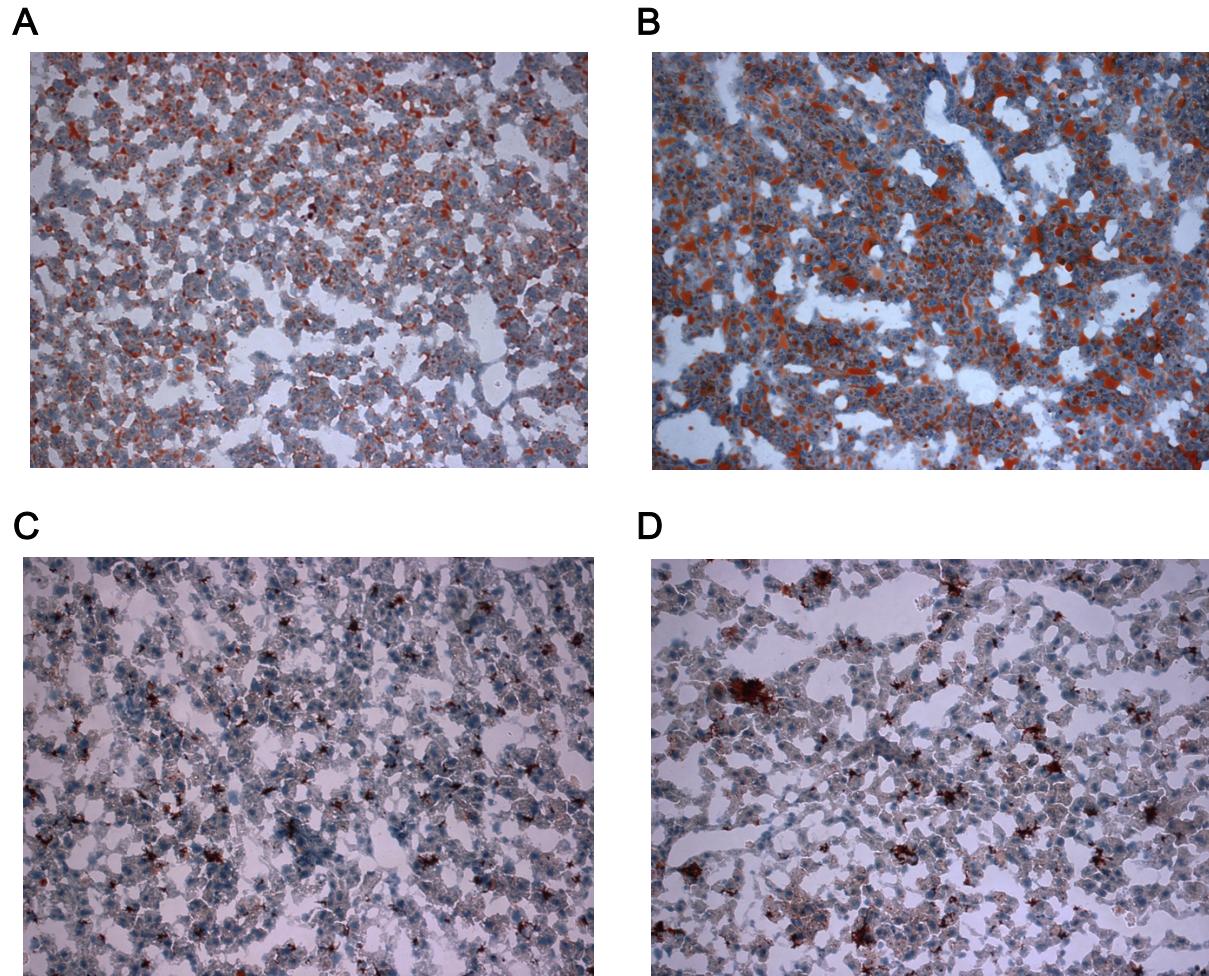

- (A) Mice were subject to LD control (LD Control), LD ethanol (LD EtOH), regular chow diet (MC Control) and chronic ethanol exposure as per MC model (MC EtOH). The data represent the mean \pm SEM, ** $p < 0.01$; **** $p < 0.0001$ (2-way ANOVA with Tukey's test, n = 10 mice LD group, n = 52 mice MC group).
- (B) Mice were subject to LD control (LD Control), LD ethanol (LD EtOH), regular chow diet (MC Control) and chronic ethanol exposure as per MC model (MC EtOH). LD diet and MC EtOH (ethanol in drinking water) were freshly prepared every day. The body weights of all mice and the amounts of ethanol consumption were measured every day. The data represent the mean \pm SEM, **** $p < 0.0001$ (*t*-test with the Holm-Sidak method, n = 5 mice per group).

Supplementary Figure 2

Liver tissue from mice subjected to LD control (Panel A), LD ethanol (Panel B), regular chow diet (Panel C) and chronic ethanol exposure as per MC model (Panel D) was fixed in 10% formalin for 24 hours, embedded in paraffin and stained with standard Hematoxylin and Eosin (H&E). Representative pictures x2000 were taken.

Supplementary Figure 3

Liver tissue from mice subjected to LD control (Panel A), LD ethanol (Panel B), regular chow diet (Panel C) and chronic ethanol exposure as per MC model (Panel D) I were fixed in Tissue-Tek Optimal Cutting Temperature (OCT) compound (Sakura Inc, CA), processed and stained with Oil Red O. Representative pictures x2000 were taken.
