

Supplementary Figure 1. Immunolocalization and quantification of 4-HNE positive staining. Representative images of 4-HNE in CTRL (a, b) and DHEA (c, d) mice. Quantification of 4-HNE positive staining in the experimental groups (e). Data are presented as means \pm SEM of mean pixel intensity of 4-HNE signals. Three mice per experimental group were employed. Experiments were done in triplicate. *** $P < 0.001$, t-test.
