Supplementary Methods: Masking to achieve compatibility between HM and the other atlases

We carried out brain extraction in five steps: 1) binarizing the manually generated labels to generate Mask A for later use, 2) generating a brain mask with FSL BET on each full image with -f and -g parameters optimized per subject to achieve visually satisfactory masking, 3) eroding the result of Step 2 in four iterations to generate Mask B, 4) combining Mask A and Mask B using Boolean OR, 5) multiplying the MR image with the mask resulting from Step 4.

Supplementary Table A1. Summary of atlas databases.

	HM	DKT40	MGC2012
Scanner	1.5T GE Signa Echospeed	n=19: 1.5T Siemens Vision n=11: 3T Philips Achieva n=10: 3T Phillips	1.5T Siemens Vision
Sequence	3D Cor IR-SPGR	n=19: 3D Sag MP-RAGE n=11: 3D Sag MP-RAGE n=10: 3D Unknown	3D Sag MP-RAGE
Voxel Size (mm)	0.9375×0.9375×1.5	n=19: 1×1×1.25 n=11: 1×1×1.2 n=10: 1×1×1	1×1×1.25
Number of Regions	95	62	138
Atlas Voxel Size (mm)	0.9375×0.9375×0.9375	n=29: 1×1×1 n=11: 1×1×1.2	1×1×1
Number of Subjects	30	40	30
Age Range (mean ± SD)	20–54 (31.0 ± 7.8)	19–61 (26.4 ± 7.3)	18–90 (34.3 ± 20.7)
Gender (F/M)	15/15	20/20	20/10
Handedness (R/L)	25/5	37/1 [†]	30/0

Cor: coronal, Sag: sagittal, IR-SPGR: inversion recovery prepared fast spoiled gradient recall sequence, MP-RAGE: magnetization prepared rapid gradient-echo.

[†]2 unknown handedness

Supplementary Table A2. List of 95 cortical and sub-cortical labels for HM atlas.

Abbreviations: L = left, R = right, gyr. = gyrus, cort. = cortex, ant. = anterior, post. = posterior, sup. = superior, inf. = inferior, med. = medial, lat. = lateral, temp. = temporal.

No.	Region Name	24	cingulate gyrus, ant. L	48	lat. ventricle, temp. horn L	72	post. orbital gyr. L
1	hippocampus R	25	cingulate gyrus, ant. R	49	third ventricle	73	post. orbital gyr. R
2	hippocampus L	26	cingulate gyrus, post. L	50	precentral gyr. L	74	substantia nigra L
3	amygdala R	27	cingulate gyrus, post. R	51	precentral gyr. R	75	substantia nigra R

Supplementary Table D1. Group differences for the HM atlas database.

Negative percentage difference values indicate smaller volumes in AD than HC. Significant differences in structure volumes between HC and AD groups (from the ANCOVA, after adjustment for 93 multiple comparisons) shown in bold. Abbreviations as in Supp. Table B1.

Supplementary Table E1. Group differences for the HM atlas database (left HS).

Group differences between healthy control (HC) subjects and left hippocampal sclerosis (LHS) patients for the HM atlas set with the MAPER and FreeSurfer segmentation methods. Negative percentage difference values indicate smaller volumes in LHS than HC. Significant differences in structure volumes between HC and LHS groups (from the ANCOVA, after adjustment for 93 multiple comparisons) shown in bold. Abbreviations as in Supp. Table B1.

Supplementary Table E3. Group differences for the MGC2012 atlas database (left HS).

Group differences between healthy control (HC) subjects and left hippocampal sclerosis (LHS) patients for the MGC2012 atlas set with the MAPER and FreeSurfer segmentation methods. Negative percentage difference values indicate smaller volumes in LHS than HC. Significant differences in structure volumes between HC and LHS groups (from the ANCOVA, after adjustment for 132 multiple comparisons) shown in bold. Abbreviations as in Supp. Table B1.

Supplementary Table E4. Group differences for the HM atlas database (right HS).

Group differences between healthy control (HC) subjects and right hippocampal sclerosis (RHS) patients for the HM atlas set with the MAPER and FreeSurfer segmentation methods. Negative percentage difference values indicate smaller volumes in RHS than HC. Significant differences in structure volumes between HC and RHS groups (from the ANCOVA, after adjustment for 93 multiple comparisons) shown in bold. Abbreviations as in Supp. Table B1.

Supplementary Table E5. Group differences for the DKT40 atlas database (right HS).

Group differences between healthy control (HC) subjects and right hippocampal sclerosis (RHS) patients for the DKT40 atlas set with the MAPER and FreeSurfer segmentation methods. Negative percentage difference values indicate smaller volumes in RHS than HC. Significant differences in structure volumes between HC and RHS groups (from the ANCOVA, after adjustment for 62 multiple comparisons) shown in bold. Abbreviations as in Supp. Table B1.

Supplementary Figure S1. Boxplots of Jaccard overlaps for the HM atlas database.

Boxplots of JC (across 30 subjects) for each region are shown for MAPER (top) and FreeSurfer (bottom). Regions are colour coded by lobe: red – temporal lobe, orange – insula & cingulate, yellow – frontal lobe, green – occipital lobe, blue – parietal lobe, purple – central structures, pink – posterior fossa & ventricles. The top and bottom edges of the boxes are the 25th and 75th percentiles, the target inside each box is the median and outliers are indicated by unfilled circles on either end of the box whiskers. Abbreviations: L = left, R = right, gyr. = gyrus, cort. = cortex, ant. = anterior, post. = posterior, sup. = superior, inf. = inferior, med. = medial, lat. = lateral, temp. = temporal.

Supplementary Figure S2. Boxplots of Jaccard overlaps for the DKT40 atlas database.

Boxplots of JC (across 30 subjects) for each region are shown for MAPER (top) and FreeSurfer (bottom). Plot colours and abbreviations as in Supplementary Figure 1.

Supplementary Figure S3. Boxplots of Jaccard overlap for the MGC2012 atlas database.

Boxplots of JC (across 30 subjects) for each region are shown for MAPER (top) and FreeSurfer (bottom). Plot colours and abbreviations as in Supplementary Figure 1.
