

Definitions of composites of MACCE

All-cause death was defined as death from any cause. Cardiac death was defined as any death due to immediate cardiac cause, procedure-related deaths, and deaths without a clear noncardiac cause. MI was defined as ischaemic signs or symptoms and new pathological Q-waves in ≥ 2 contiguous ECG leads, or/and an elevation CK-MB or troponin above the 99th percentile limit of normal and at least $\geq 20\%$ above the most recent value. Stroke was defined as a focal neurologic deficit of central origin lasting >72 hours, or a focal neurologic deficit of central origin lasting >24 hours, with imaging evidence of cerebral infarction or intracerebral hemorrhage. Repeat revascularization was defined as any repeat PCI or CABG. All stages of a staged index PCI procedure would be considered part of the index revascularization procedure and not a repeated revascularization.
