

**Supplemental file 4a. Proportion of the 3430 deaths with a known cause that were specifically due to injury, among Canadian males aged 1 to 24 years.** Shown on the Y-axis are age-specific proportions and 95% confidence intervals (CI) for injury-related deaths. Below the X-axis is a breakdown of deaths due to injury, by injury sub-types, from ages 1 to 14 years (left pie chart), and 15 to 24 years (right pie chart).

**Supplemental file 4b. Proportion of the 2218 deaths with a known cause that were specifically due to injury, among Canadian females aged 1 to 24 years.** Shown on the Y-axis are age-specific proportions and 95% confidence intervals (CI) for injury-related deaths. Below the X-axis is a breakdown of deaths due to injury, by injury sub-types, from ages 1 to 14 years (left pie chart), and 15 to 24 years (right pie chart).
