

**A****B****C**

**Supplementary Figure 1. Purification and mono-ubiquitination of human FANCI:FanCD2 complex. (A)** Coomassie stained 3-8% Tris-acetate gel of Flag- and Talon-affinity purification of human FANCI:FanCD2 complex, and Western blot of Talon-purified FANCI:FanCD2 complex. **(B)** Coomassie stained SDS-PAGE gel revealing that human FANCI runs higher than *Xenopus* FANCI in the FANCI:FanCD2 complex. **(C)** Mono-ubiquitination of human and *Xenopus* FANCI:FanCD2 complex in a reaction containing recombinant FA core complex proteins at 25 °C for 90 min.
