

THE LANCET Infectious Diseases

Supplementary webappendix

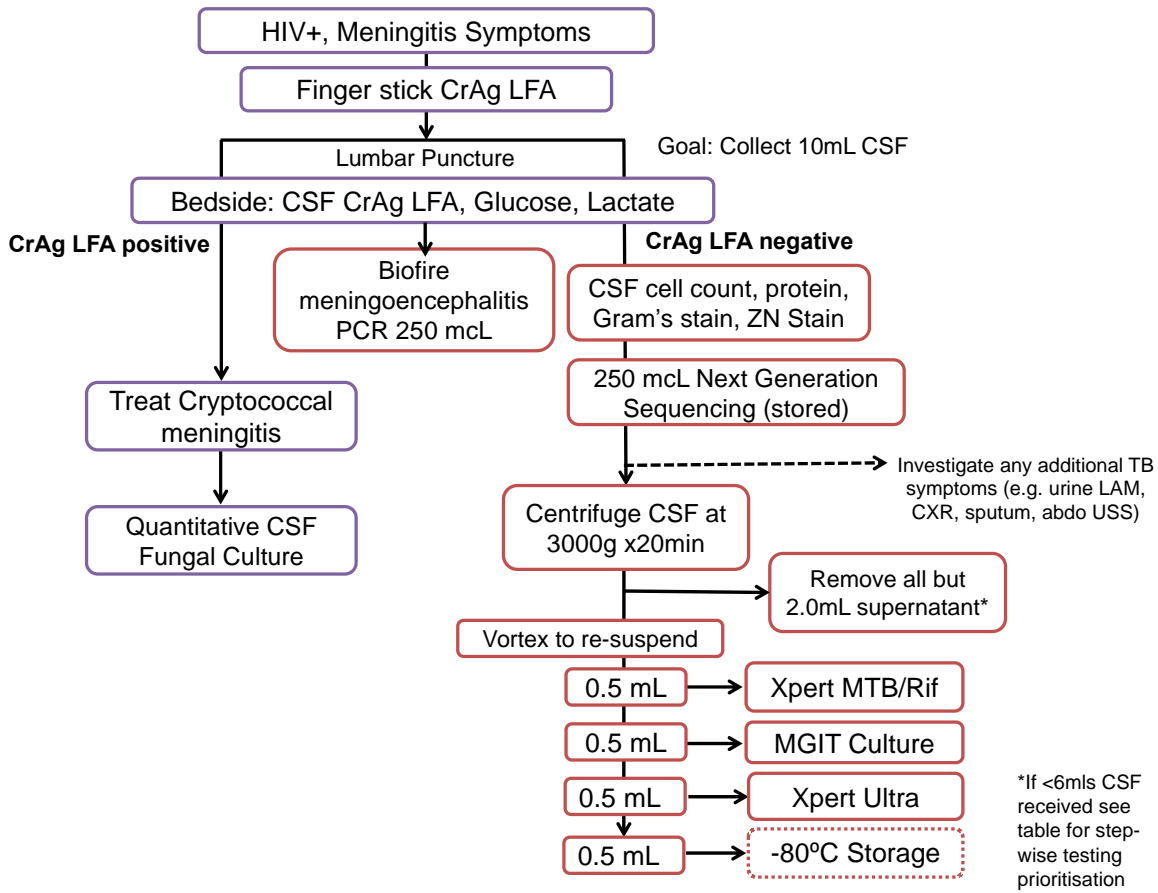

This webappendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

Supplement to: Cresswell FV, Tugume L, Bahr NC, et al, on behalf of the ASTRO-CM team. Xpert MTB/RIF Ultra for the diagnosis of HIV-associated tuberculous meningitis: a prospective validation study. *Lancet Infect Dis* 2020; published online Jan 7. [https://doi.org/10.1016/S1473-3099\(19\)30550-X](https://doi.org/10.1016/S1473-3099(19)30550-X).

Contents

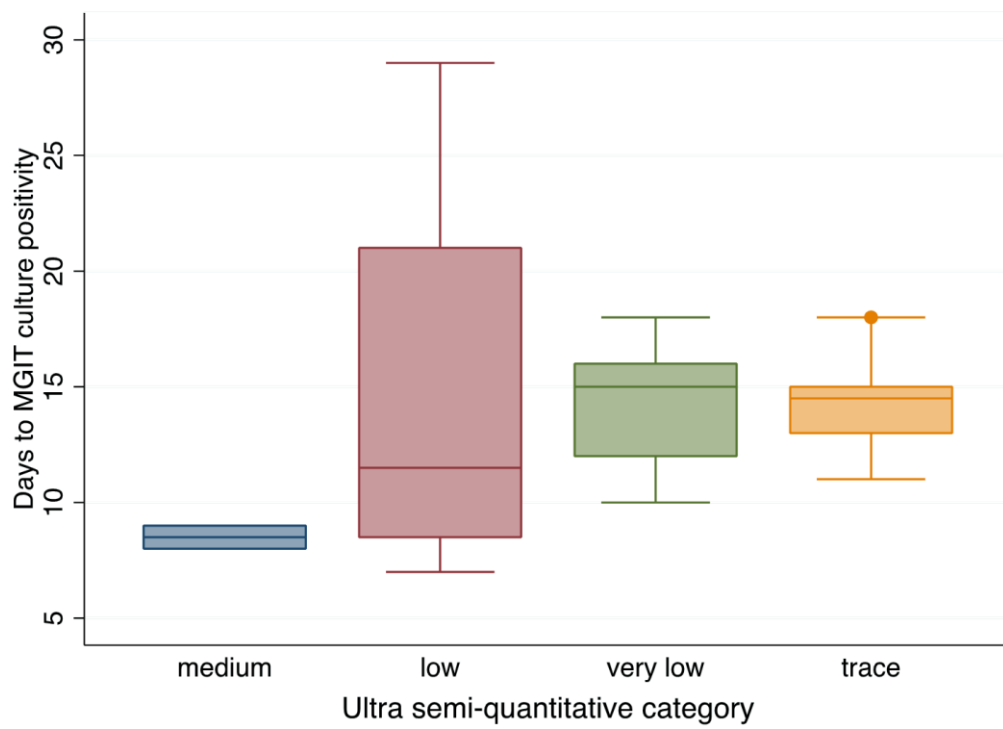

Supplemental Figure 1. CSF flowchart illustrating diagnostic testing performed	2
Supplemental Figure 2. Days to MGIT culture positivity by Ultra semi-quantitative category	3
Supplemental Table 1. Step-wise testing of CSF in low volume CSF samples	4
Supplemental Table 2. Characteristics of participants with microbiologically confirmed TBM	5
Supplemental Table 3. Diagnostic accuracy when only participants whose CSF was tested with all 3 assays were included.	7
Supplemental Table 4. Ultra and Xpert semi-quantitative categories and days to culture positivity	8
Supplemental Table 5. Sensitivity of assays by MRC disease severity grade.....	9

Supplemental Figure 1. CSF flowchart illustrating diagnostic testing performed

Biofire meningoencephalitis PCR was performed on 80/204 CSF samples. The machine had a technical fault for a period of time that precluded real-time testing on all participants.

Supplemental Figure 2. Days to MGIT culture positivity by Ultra semi-quantitative category

There were 36 participants with a known Ultra semi-quantitative category (5 medium, 7 low, 10 very low and 14 trace)

Supplemental Table 1. Step-wise testing of CSF in low volume CSF samples

Volume CSF received	WBC protein Gram	SPIN 3000g 20 minutes	Ultra (on 0.5ml pellet)	MGIT culture (on 0.5ml pellet)	Xpert (on 0.5ml pellet)	Cell pellet storage
<2mls	yes		yes	no	no	no
2-4mls	yes		yes	yes	no	no
4-6mls	yes		yes	yes	yes	no
>6mls	yes		yes	yes	yes	yes

Supplemental Table 2. Characteristics of participants with microbiologically confirmed TBM

Age (years)	Sex	CD4 (cells/ μ L)	ART (duration, days)	GCS	MRC grade	Duration headache (days)	Serum CrAg	CSF CrAg	CSF opening pressure (mm)	CSF WBC (cells/ μ L) [%lymphs]	CSF protein (g/L)	CSF glucose (mmol)	Ultra	Xpert	MGIT culture	Ultra semi-quant category	Days to MGIT culture positivity	Hospital outcome	Duration hospitalisation/time to death (days)

Supplemental Table 3. Diagnostic accuracy when only participants whose CSF was tested with all 3 assays were included.

CSF Test	N	Sensitivity vs. composite microbiologic endpoint ^a	Sensitivity vs. case definition ^b	Specificity vs. case definition	NPV vs. case definition
Xpert Ultra	117	91.4% (32/35) [76.9–98.2]	80.0% (32/40) [64.4–90.9]	100% (77/77) [95.3–100]	90.6% (77/85) [82.3–95.8]
Xpert MTB/Rif	117	68.6% (24/35) [50.7–83.1]	60.0% (24/40) [43.3–75.1]	100% (77/77) [95.3–100]	82.8% (77/93) [73.6–89.8]
MGIT Culture	117	74.3% (26/35) [56.7–87.5]	65.0% (26/40) [48.3–79.4]	100% (77/77) [95.3–100]	84.6% (77/91) [75.5–91.3]

^a Composite microbiological endpoint included any positive CSF test including ZN stain microscopy, Xpert, Xpert Ultra, or MGIT culture.

^b Composite case definition for probable or definite TBM is as per the published uniform definition

Supplemental Table 4. Ultra and Xpert semi-quantitative categories and days to culture positivity

Semiquantitative (SQ) category	Xpert (n=25)	Ultra (n=39)	Days to culture positivity by Ultra SQ category	
			n	Median days [IQR]
Unknown	2 (8%)	3 (8%)
High	0	0	0	..
Medium	0	5 (13%)	2	8.5 [8–9]
Low	13 (52%)	7 (18%)	4	11.5 [8.5–21]
Very low	10 (40%)	10 (26%)	9	15 [12–16]
Trace	NA	14 (36%)	6	14.5 [13–15]

Supplemental Table 5. Sensitivity of assays by MRC disease severity grade

MRC grade*	Ultra sensitivity		Xpert sensitivity		MGIT sensitivity	
	Composite	Uniform case definition	Composite	Uniform case definition	Composite	Uniform case definition
Grade 1 (n=67)	100% (6/6)	100% (6/6)	83% (5/6)	83% (5/6)	83% (5/6)	83% (5/6)
Grade 2 (n=100)	96% (23/24)	74% (23/31)	67% (14/21)	54% (14/26)	75% (15/20)	58% (15/26)
Grade 3 (n=33)	82% (9/11)	69% (9/13)	50% (5/10)	42% (5/12)	60% (6/10)	55% (6/11)

*MRC grade unknown in n=4

British MRC severity grade 1 = GCS 15 and no focal neurology; MRC grade 2 = GCS 11-14 with or without focal neurology or GCS 15 with focal neurology; MRC grade 3 = GCS \leq 10 with or without focal neurology.
