P.I.	135.2	128.4	134.1	141.5	148.7	135.3	135.7	126.6	133.1 ± 12.6	0.6696	NO

Pre and *post* are referred to the 2-month treatment with tocotrienol. The content of individual fatty acids in erythrocyte membranes is expressed as percentages of the total fatty acids identified.

S.I. [Saturation Index] was calculated according to the formula: (18:0/18:1).

U.I. [Unsaturation Index] was calculated according to the formula: (% Monoenoic x 1) + (% Dienoic x 2) + (% Trienoic x 3) + (% Tetraenoic x 4) + (% Pentaenoic x 5) + (% Hexaenoic x 6).

P.I. [Peroxidation Index] was calculated according to the formula: (% Monoenoic x 0.025) + (% Dienoic x 1) + (% Trienoic x 2) + (% Tetraenoic x 4) + (% Pentaenoic x 6) + (% Hexaenoic x 8).
