

Supplementary Table SII Temporal trends in age at menopause among 301 028 women born during the years 1936–1964.

	Age at menopause, years			
	Mean	95% CI	HR	95% CI
Birth cohort				
1936–1939	50.41	50.36–50.46	Reference	
1940–1944	50.84	50.81–50.88	0.88	0.86–0.89
1945–1949	50.88	50.85–50.91	0.87	0.85–0.88
1950–1954	51.03	51.00–51.06	0.83	0.81–0.84
1955–1959	51.83	51.79–51.88	0.66	0.65–0.67
1960–1964	52.58	52.51–52.64	0.54	0.53–0.55

Women with menopause <40 years and > 60 years are excluded ($n = 11\ 628$). The associations of birth cohort with age at menopause are estimated as crude HRs with 95% CI by applying flexible parametric models.

HR = hazard ratio.
