

Additional File 13. Diversity of *xoxF4* gene sequences retrieved from the heavy fractions of soils enriched with ^{13}C methanol.

Relative abundance of taxa based on *xoxF4* gene sequences retrieved from the assembled reads of the metagenomes produced from the heavy fractions of DNA extracted from Unplanted (Soil), pea rhizosphere (Pea) and wheat rhizosphere (Wheat) soil samples enriched with ^{13}C methanol for 17 days (T2) in a DNA-SIP experiment. The number of contigs containing *xoxF4* sequences is displayed in brackets above the columns.
