

Figure S1.

Figure S1. Normalized *P. aeruginosa* growth in media and atop HBE cells. Background-subtracted luminescence of PAO1 and clinical strains of *P. aeruginosa* grown in cell media (black), or atop of F508del-CFTR HBE cells treated with VX-809 (red). Bacterial load was recorded in the absence of 6K-F17/tobramycin after 4 hr. Significance is reported as follows: ns, not significant; ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$. Data represent mean \pm SEM ($n \geq 4$ biological replicates)
