What is your estimate of 24-hour mortality rate for trauma patients with hemorrhagic shock receiving **standard component blood** therapy?

Step 1: Use this slider to set the position of YOUR estimate of the LOWER and UPPER plausible values for the 24-hour mortality rate for trauma patients with hemorrhagic shock receiving **standard component therapy**.

When you finish setting the lower and upper plausible values in Step 1, please click the below box to continue with Step 2.

Continue

Step 2: Use this slider to set the position of YOUR opinion of the MOST LIKELY value for the 24-hour mortality rate for trauma patients with hemorrhagic shock receiving **standard component therapy**.

Press the PLOT button to show the distribution graph representing your belief. You can adjust the values until the graph best reflects your belief.

PLOT

When you are happy with the plot, continue with Question 2.
