

Supplementary Figure S1. Effect of corylifol A on p38 MAPK activation during myogenesis.

C2C12 cells were pre-treated with SB203580 (10 μ M) prior to corylifol A and then differentiated in DM for 2 days, and immunostained with MHC (red) and DAPI (blue). Scale bar = 200 μ m. The images are representative of three independent experiments with similar results. Means without a common superscript differ significantly ($p < 0.05$).
