Award for a Distinguished Contribution in Mass Spectrometry

2014 Recipient: Richard M. Caprioli

Award Lecture: 4:45 pm, Monday, Exhibit Hall AB, level 1

Dr. Richard M. Caprioli is awarded the 2014 ASMS Award for a Distinguished Contribution in Mass Spectrometry for the development of MALDI Imaging Mass Spectrometry and its application to molecular mapping of tissues in biology and medicine.

Professor Caprioli's work led to a new paradigm for molecular imaging of tissues, founded on the development of matrix assisted laser desorption ionization (MALDI) imaging mass spectrometry. This is now a burgeoning application of mass spectrometry whereby molecular measurements can be made directly from tissues, adding significantly to the information that can be obtained from these specimens.

This work has made significant contributions to the study of proteins, lipids, metabolites, and pharmaceutical compounds. Since publication of Professor Caprioli's seminal 1997 paper (Anal. Chem. 69(23), 4751-4760) showing the power of MALDI imaging mass spectrometry for tissue analysis, he has pioneered advancements in sample preparation, instrumentation, and informatics approaches that have considerably advanced the technology and made it accessible to hundreds of laboratories worldwide.

The impact of his work is evident in the numerous commercial platforms that employ this technology. Approximately 2,500 papers have been published to date on the subject of MALDI imaging mass spectrometry.

Dr. Caprioli is the Stanford Moore Chair in Biochemistry and Director of the Mass Spectrometry Research Center at Vanderbilt University.Scientist in the Biological Sciences Division and Director of Proteomics Research at Pacific Northwest National Laboratory (PNNL).

Biemann Medal

2014 Recipient: Lingjun Li

Award Lecture: 4:45 pm, Tuesday, Exhibit Hall AB, level 1

Dr. Lingjun Li is awarded the 2014 Biemann Medal for the number and depth of her contributions in the field of mass spectrometric study of neuropeptides and functional peptidomics.

Professor Lingjun Li's research program is focused on the development of novel and improved mass spectrometry (MS)-based tools in conjunction with microseparation techniques to study challenging neuroscience problems including functional discovery of neuropeptides and biomarker discovery in neurodegenerative diseases.

Dr. Li and her team have created several multi-faceted and integrated MS-based platforms that include high resolution *in-situ* peptide mapping, tissue imaging, *in vivo* microdialysis, high sensitivity micro-separation techniques coupled with tandem MS *de novo* sequencing, and new isotopic and isobaric labeling strategies, and improved bioinformatics tools to allow large-scale discovery and functional analysis of novel neuropeptides. More recently, the Li group also employed novel use of ion mobility MS to address several remaining technical challenges associated with peptidomic research. They developed a novel site-specific strategy to rapidly and precisely localize peptide epimers and new strategies to probe peptide sequence scrambling and peptide misidentification, and to improve isobaric tandem mass tag quantitation in QTOF based instrumentation.

Using these integrated platforms and multifaceted approaches, Professor Li and her group discovered more than 300 novel neuropeptides in crustacean model organisms whose genomic sequences are currently unavailable. These findings significantly expanded our knowledge about neuropeptides in these important model organisms and transformed current understanding of neuropeptide family organization and functional consequences of neuropeptide multiplicity.

Dr. Li is Professor of Pharmaceutical Sciences and Chemistry at the University of Wisconsin-Madison.

The Research Awards are fully funded by Thermo Scientific and Waters Corporation in the amount of $35,000 each. Awards will be presented at the Biemann Medal Award Lecture, 4:45 pm, Tuesday, Exhibit Hall AB, level 1

2014 POST-DOCTORAL AWARDS

ASMS inaugurates the Post-Doctoral Awards in 2014. Three awards in the amount of $10,000 each will be awarded annually. The purpose of the award is to promote the professional career development of postdoctoral fellows in the field of mass spectrometry. Activities envisioned for this award include, but are not limited to, conference and workshop attendance, travel to other mass spectrometry laboratories, purchase of books and/or software. The awards are open to ASMS members who are postdoctoral fellows within three years of completing a Ph.D. or equivalent degree. Applicants must be currently appointed as a postdoctoral fellow in North America (e.g., in academia, industry, a government or national laboratory or at a research institute). Details and an application are posted to asms.org.

RON A. HITES AWARD FOR OUTSTANDING RESEARCH PUBLICATION IN *JASMS*

The Ron Hites Award recognizes an outstanding presentation of original research. Selection is based on a paper's innovative aspects, technical quality, likely stimulation of future research, likely impact on future applications, and quality of presentation. The award is named in honor of Professor Ron Hites of Indiana University, who led the creation of *JASMS* in 1988 while president of ASMS. The corresponding author receives a cash award of $2,000 and all authors are acknowledged with certificates of commendation.

The 2014 award recognizes **Evan Williams** and co-authors Harry J. Sterling; Alexander F. Kintzer; Geoffrey K. Feld; Catherine A. Cassou; Bryan A. Krantz; for their paper **Supercharging Protein Complexes from Aqueous Solution Disrupts their Native Conformations**; *JASMS* 2012, vol. 23, pages 191 – 200.

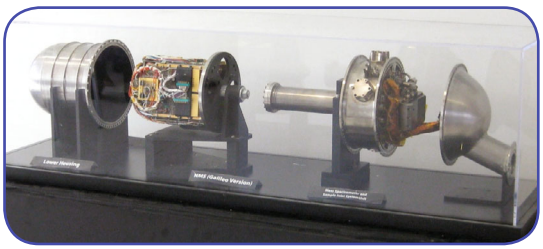
Spaceflight Mass Spectrometry 1963 – 2018

A small exhibit featuring models of spaceflight mass spectrometers employed in the exploration of the Solar System over the past several decades is displayed in the Pratt Lobby. Mass spectrometers have contributed substantially to our understanding of planetary science and astrobiology, and their continued use has a bright future with new technologies under development. Displayed models include engineering units, flight spares, and demonstration reproductions from robotic planetary missions to Venus, Jupiter, Saturn, Titan, and Mars. Experts will be on hand to answer questions about instrument design, mission science achievements, and future directionassociated with these one-of-a-kind instruments.



The display has been coordinated by William B. Brinckerhoff, NASA GSFC, Greenbelt MD.

MONDAY WORKSHOPS, 5:45 - 7:00 PM

1. Real World Applications of Photoionization;
Ralf Zimmerman and Jack Syage presiding
Room 307-308

The workshop on Photoionization last year was a success with a standing room only crowd to the end. That workshop brought the mechanism of atmospheric pressure photoionization and vacuum photoionization up to date and stimulated significant discussion. This year we would like to focus more on applications as PI is expanding in its uses ranging from APPI in LC/MS in petroleums, food safety, and environmental monitoring to ambient analysis (DAPPI, DART/APPI, etc.) to its now becoming the preferred ionization source for explosives detection airport security detection systems (MS and IMS) potentially expanding the user base by yet another few thousand. This would be a great opportunity to get discussion and feedback on these new developments from the MS community and perhaps set the stage for a PI oral session in 2015 as these new developments mature.

2. Taming Errors for Peptides with Post-Translational Modifications (organized by Bioinformatics for MS Interest Group);
Karl Clauser, Karl Mechtler, Lukas Käll, David Tabb presiding
Room 309-310

The use of database search engines for identification of posttranslational modifications (PTMs) is common practice in most proteomics labs, but these identifications have been plagued by errors from two key sources. Karl Clauser will highlight the elevation of false discovery rates that results from allowing more degrees of freedom in identification, such as allowing for "blind PTM" searches or permitting too many modifiable sites in some peptides. Karl Mechtler will emphasize localization, the challenge of associating PTMs with the appropriate residue when multiple modifiable sites may be found in a peptide. Which PTM challenge merits more attention from the bioinformatics research community?

3. Applying Ion Mobility to Biological Problems (organized by Ion Mobility MS Interest Group); Matthew Bush and Erin Baker presiding
Room 314-317

Results from ion mobility mass spectrometry studies are increasingly used to answer questions in biology, including applications to metabolomics, proteomics, targeted interactions, and large molecules. This is in part attributed to the increasing performance and selection of commercial ion mobility mass spectrometry instrumentation, which has made it easier to integrate ion mobility technologies into mass spectrometry workflows. In this workshop, we will showcase research that demonstrates the advantages of ion mobility for biological applications. There will also be opportunities to discuss the challenges that arise in different types of ion mobility studies, what is possible today, and opportunities for the future.

4. How to Succeed in Pharma without Really Trying;
Lucinda Cohen presiding
Room 327

This workshop will focus on advice to young scientists considering career choices after graduation. An expert panel consisting of current and former pharmaceutical scientists will engage in dialogue with the audience around their experiences job-hunting, changing positions, networking inside and outside the company, and thriving in today's ever-changing environment. Audience participation will be an essential driver for the workshop, with shared participant experiences being welcome. This workshop will continue the theme of the Sunday Tutorial Lecture by Lucinda Cohen, "Everything You Ever Wanted to Know about Mass Spectrometry in the Pharmaceutical Industry but Were Afraid to Ask." However, the focus will be pragmatic and offer insider perspectives on life in an industrial laboratory environment. Ultimately the intent is to help young mass spectrometrists connect with pharmaceutical industry veterans.

5. Discussion on MS Analysis of Oligonucleotides: Methodology and Informatics (organized by DNA/RNA Interest Group);
Norman Chiu and Michael McGinley presiding
Room 336

The workshop will cover recent advances in MS characterization of oligonucleotides with an emphasis on recent development in sample preparation as well as MS data processing. While MS instrument development will likely be covered in other sessions, there have been several developments both in sample preparation of oligonucleotides as well as data analysis of collected data. The proposed workshop will have 4 short topic "primers" from thought leaders starting discussions; two about sample processing leading to oligonucleotide analysis using MS/MS as well as two discussing data interpretation of MS/MS data for oligonucleotides. Discussion should lead to some view of the current trends in analysis of oligonucleotides by MS.

6. Use of Mass Spectrometry to Overpower Complexity of Biofuels and Petroleum (organized by Energy, Petroleum & Biofuels Interest Group); Patrick Hatcher and Lateefah Stanford presiding
Room 337

The molecular complexity of biofuels and petroleum has offered an analytical challenge for those interested in assessing their composition. Advances in 2 dimensional GC x GC-MS, Fourier transform MS and Ion mobility MS are allowing for an exhaustive molecular characterization of these materials, to the point that a comprehensive molecular-level characterization of thesemixtures is within reach. New developments in MS instrumentation and approaches are paving the way for advanced characterization of complex mixtures like petroleum and biofuels. The workshop will invite discussion leaders at the forefront of applications of these advanced MS approaches in the energy field to enlighten interested groups to venture into the arena.

7. Getting the Most out of Undergraduate Mass Spectrometry Research (organized by Undergraduate Research in MS Interest Group); JC Poutsma and Elaine Marzluff presiding
Room 338

Panel discussion with current undergrads, recent graduates, and faculty members at PUI institutions. This workshop is designed for undergraduates who are attending the ASMS meeting and will focus on how best to leverage their undergraduate research into success in graduate school and industry.

8. ProteomicsDB; Bernhard Kuster and Mathias Wilhelm presiding
Room 339-340

There is a growing landscape of various databases and repositories for MS and proteomics. In this workshop, we would like to present ProteomicsDB, a free, professionally developed solution to store and analyze mass spectrometry-based proteomics data. ProteomicsDB has a strong focus on functionality and secondary use of proteomics and mass spectrometry data. We would like to discuss our motivations for initiating this effort, demonstrate typical use-cases for web interface and API, describe our short and long-term plans and generally encourage the involvement from the ASMS community.

9. Working with Federal Agencies to Obtain Research Support. Session I: Counsel and Resources for Interactions with Federal Funding Agencies; Douglas Sheeley, Charles Edmonds, and Salvatore Sechi presiding
Room 341-342

A major source of financial support for US research is the federal government. Unfortunately, researchers are sometimes not aware of the resources available to them. This two session workshop, to be held on consecutive evenings at the ASMS conference, will discuss the identification of appropriate agencies and programs, writing an effective application, responding to the criticisms of reviewers, and taking full

MONDAY WORKSHOPS, 5:45 - 7:00 PM continued

advantage of guidance from program administrators. Speakers will explore these issues from the perspectives of the applicant, reviewer, and administrator, with some emphasis on the new investigator. References to additional resources will be provided. A "mock" NIH study section presentation will provide additional insight into the review process at that agency, and an opportunity for discussion with NIH staff. Each session will allow substantial time for questions and staff will be available for one-on-one conversations afterward on both evenings.

10. Systems of Annotation and Reporting Requirements for Lipid Mass Spectrometry (organized by Lipids and Lipidomics Interest Group); Stephen Blanksby and Christer Ejsing presiding
Room 343-344

The 61st ASMS conference in Minneapolis played host to the first workshop on "Lipid Mass Spectrometry and Lipidomics". This workshop was attended by ~190 participants and resulted in vibrant discussion. A recurring theme was the importance of developing guidelines for the uniform reporting of mass spectrometry-based lipid and lipidome data, particularly in terms of an abbreviation code that encapsulates the exact level to which lipids can be structurally defined and/or quantified when using a particular MS or MS/MS approach. This workshop will invite opinion on systems of annotation and reporting requirements from leaders in the field that will then be opened for discussion and input from all workshop participants. An expected outcome of this workshop will be the formation of a working group to collate and consider the ideas presented and to refine this into a series of recommendations for lipid mass spectrometrists.

11. A State of the Union for Biomarker Translation (organized by Clinical Chemistry Interest Group);
Brian Rappold and Cory Bystrom presiding
Room 345-346

With recent announcements from CPTAC and commercial companies that are offering novel diagnostics derived from proteomics research this presents an opportunity to review the problems that have been solved and the challenges that lie ahead. In this workshop, we will invite several guest speakers to give a brief assessment of the landscape from discovery to clinical utilization/commercialization which will be followed by a moderated discussion. The co-chairs will also be soliciting ideas for future workshop topics so bring your ideas.

12. Antibody Drug Conjugates as Pharmaceutical Agents
(organized by Pharmaceuticals Interest Group); Brian Furmanski and Shawna Hengel presiding
Room 347-348

Due to the success of the 2013 pharmaceutical interest group workshop we will continue with a similar format being; the overview of the topic of antibody drug conjugates as pharmaceutical agents with a short informal presentation (10 min) by an academic/industrial leader. Following the presentation the panelists will be introduced along with three key questions to start of the discussion with the general audience. The short presentation is meant to capture the field in its current state, in addition give specific examples of challenging issues in the industry for the discovery and development of antibody drug conjugates. Potential areas of discussion may include characteristics of antibodies, drug antibody ratio (DAR) in vivo/ex vivo, strategies for sample prep/isolation, choice of mass analyzers and a comparison of complimentary tools to mass spectrometry including: ELISA, Luminex, page electrophoresis, Edman sequencing and surface plasmon resonance. To identify panelists, gauge the level of interest of the ASMS community and to tailor the discussion we will send out a survey of open ended questions in April.

13. Roundtable Discussion on Research Challenges in Forensics and Homeland Security (organized by Forensics and Homeland Security Interest Group); Guido Verbeck and Glen Jackson presiding
Room 349-350

Forensic-related applications of mass spectrometry has some unique challenges for researchers wishing to pursue a career in this field. We plan to stimulate an informative discussion between roundtable participants and audience members around the following topics: Funding; publishing; collaborating; job hunting; academic challenges. Roundtable participants will include knowledgeable and experienced members of the forensic and homeland security community, including representatives of funding agencies, crime labs, academia and publishers.

TUESDAY WORKSHOPS, 5:45 - 7:00 PM

All workshops are located on level 3. There are light refreshments on level 3.

1. H/D Exchange, Covalent Labeling and Crosslinking (organized by H/D Exchange, Covalent Labeling & Cross Linking Interest Group); Joshua Sharp and David Schriemer presiding
Room 307-308

The workshop will provide a forum for discussing the latest HDX, covalent labeling and crosslinking methods for protein analysis. Presentations will provide an opportunity to discuss MS-based methods, data analysis routines and applications with the attendees. The goal of these presentations will be to stimulate discussion and convey useful experimental detail you can take back to your lab.

2. LC-MS System Performance Tracking in LC-MS (organized by LC/MS & Related Topics Interest Group);
Helene Cardasis presiding
Room 309-310

While this group has previously hosted an annual workshop on LC-MS troubleshooting, this year we will take a more preventative approach. The workshop this year will focus on important aspects of whole-platform performance tracking with respect to defining data quality, understanding performance drift, and facilitating/ expediting troubleshooting when issues do arise. Discussion will touch on choice of QC sample, instrument method, frequency of measurement, key metrics and their interpretation, and QC data processing. We will also review and demo some of the freeware available for this purpose. As always, audience participation in the form of both questions and heated debate are encouraged!

3. Antibody-Drug Conjugates (ADC) - A Complex Problem in Regulated Bioanalysis (organized by Regulated Bioanalysis Interest Group); Fabio Garofolo and Keyang Xu presiding
Room 314-317

The purpose of this workshop is to provide an informal venue for the discussion of ADCs from a Regulated Bioanalytical point of view based on recent industry consensus. Dr. Keyang Xu (Genentech) will lead the discussion together with a recognized panel of bioanalytical experts in the field. As per the ASMS workshop format there will not be formal presentations but the participants will introduce the discussion topics for maximum of 10 minutes to engage the audience and encourage all to participate in a dynamic and productive discussion.

ADCs are generally complex heterogeneous mixtures of multiple species, these novel therapeutic products present unique challenges in Regulated Bioanalysis: Heterogeneity of the reference material (e.g.: lysine side chain-based conjugation; hydrazine-based); Heterogeneity impact on assay accuracy; In-vivo dynamicity and deconjugation (mixture of DAR); LC-MS high sensitivity for unconjugated drug detection. Multiple validated methods are need for well characterizing ADCs quantitation: Total antibody; Conjugated antibody; Antibody-conjugated drug; unconjugated/deconjugated drug. Interpretation of the bioanalytical data from these multiple assays can be complex. Discussion will also focus on regulatory expectations surrounding comparability studies for ADC.

TUESDAY WORKSHOPS, 5:45 - 7:00 PM continued

4. Controlling and Measuring Variation in Sample Preparation and Data Analysis in a Core Facility Environment (organized by Analytical Lab Managers Interest Group); Brett S. Phinney and Chris Colangelo presiding
Room 336

Along with a panel of invited laboratory managers, we propose to discuss several topics related to controlling and measuring variation in sample preparation and Data analysis. These topics may include
1) How do you control variation in sample preparation
2) How do you measure variation is sample preparation
3) How to choose an appropriate QC standard, where to buy it or make it if necessary.
4) How to determine the appropriate number of replicates you need?
5) How to determine what amount of variation is due to sample preparation or biology
6) How do you control for variation in data analysis.
7) How to document variation and present it to core clientele

The session will discuss practical real world examples and implementations to measure and control for variation in core facilities. Audience members are encouraged to share their straggles and approaches for used in their own laboratories.

5. FTMS: ICR and Orbitrap (organized by FTMS Interest Group); Nathan Kaiser and Don Smith presiding
Room 337

Recent advances in high resolution FTMS have focused on electric field control (e.g. high field Orbitrap and compensated/harmonized ICR cells) and new implementations of advanced data processing (e.g. absorption mode and eFT). These, as well as other new developments in FTMS instrumentation and fundamentals will be discussed. Fundamental and practical topics, as well as current instrument limitations will be open for interactive discussion.

6. Environmental Impacts and Implications of Hydrocarbon Extraction and Processing – The Role of Mass Spectrometry (organized by Environmental Applications Interest Group); Kerry Peru and Chris Gill presiding
Room 338

Rapid expansion of hydrocarbon extraction, production and processing from nonconventional sources such as shale gas and oil sands has lead to the need of determining the industry's impact on the environment by characterizing and monitoring associated contaminants. This year's Workshop is a continuation of last year's topic which drew considerable interest. Updates on analytical methodologies used for monitoring, identification and characterization of contaminants will be discussed along with an update of the state of the industry from an environmental perspective.

7. Gas Phase Ion Chemistry – Thermochemistry, Kinetics and Structures. In Honor of John Bartmess (organized by Fundamentals Interest Group);
George Khairallah and Jos Oomens presiding
Room 339-340

This year marks a milestone for several researchers in the fundamentals field including Professor John Bartmess. We plan to honor this special occasion by providing a series of invited short presentations and discussions mainly in the research areas in which John was very active. In the yearly tradition of the fundamentals group, senior graduate students and postdoctoral scholars in research groups will give the presentations.

8. The NIH Review Process and Mock NIH Study Section; Douglas Sheeley, Charles Edmonds, and Salvatore Sechi presiding
Room 341-342

A major source of financial support for US research is the federal government. Unfortunately, researchers are sometimes not aware of the resources available to them. This two session workshop, to be held on consecutive evenings at the ASMS conference, will discuss the identification of appropriate agencies and programs, writing an effective application, responding to the criticisms of reviewers, and taking full advantage of guidance from program administrators. Speakers will explore these issues from the perspectives of the applicant, reviewer, and administrator, with some emphasis on the new investigator. References to additional resources will be provided. A "mock" NIH study section presentation will provide additional insight into the review process at that agency, and an opportunity for discussion with NIH staff. Each session will allow substantial time for questions and staff will be available for one-on-one conversations afterward on both evenings.

9. Imaging Mass Spectrometry vs. Histology (organized by Imaging MS Interest Group); Liam McDonnell and Zoltan Takats presiding
Room 343-344

The topic for discussion will concern the question of where imaging MS can have an impact in diagnostic and prognostic pathology, and what must be done for it to become a recognized clinical method. In order to encourage open discussion we will include a series of deliberately provocative 5-minute presentations.
i) Imaging MS can replace histology.
ii) Histology & diagnostics – mass spectrometrists underestimate its importance.
iii) What is the added benefit of imaging MS in diagnostics?
iv) In-surgery, *in-situ* analysis
v) Open discussion – where can imaging MS make a difference?
vi) What needs to be done for imaging MS to become a recognize clinical tool?

10. Metabolomics: Emerging Technologies for Continued Innovation (organized by Metaboloimics Interest Group); Sunia Trauger and Gary Patti, presiding

This workshop will begin with a brief discussion of the most exciting technological advances in the field of metabolomics over the past year. The moderators will highlight 2-3 noteworthy metabolomic publications that they feel are particularly impressive achievements and survey the audience for their opinions. Three-four invited scientists with expertise in the technologies highlighted will serve as panelists and answer questions posed by the moderators and attendees. The workshop will close with a discussion among the panelists on their perspectives of emerging trends and the role that these technologies are playing in future development. Advances intended to be highlighted are: (i) software for post-processing of untargeted metabolomic data, (ii) innovative experimental designs using stable isotopes, (iii) shotgun approaches with ion mobility, and (iv) metabolite identification by in silico fragmentation.

TUESDAY WORKSHOPS, 5:45 - 7:00 PM continued

to the mass spectrometry field's needs. The application provides a "Google Docs" type interface optimized for mass spectrometry data. Data can be uploaded and kept private, shared with a group of collaborators, or made entirely public. Over the last year CHORUS has gained almost 400 users and these users have placed >9,000 mass spectrometry data files into the service. We have learned a lot from user feedback. We would like to discuss improvements made to CHORUS over the last year and what new analysis capabilities have and are being added. We want to discuss our goals and get feedback from the community on our current and long-term priorities.

WEDNESDAY WORKSHOPS, 5:45 - 7:00 PM

All workshops are located on level 3. There are light refreshments on level 3.

1. The DIA Primer (organized by Data Indeptendent Acquisition Interest Group); Yishai Levin and Will Thompson presiding
Room 307

The heated debate over data-dependent (DDA) versus data-independent (DIA) acquisition strategies shows no signs of abating. This workshop will focus on defining the experimental characteristics, specifically related to data acquisition, which would make up the "perfect" strategy for 'omic analyses. Facilitators will prime the discussion with some simple use-cases for 'omics analysis, then experts and novices alike will gather to share views on the most important attributes of data acquisition in this space. The goal of the discussion will then be a critical evaluation of current approaches against that "perfect" strategy, with an eye towards features that should exist in the next generation of tools.

2. Mechanisms to Process Data Given Software Restrictions Across Vendors (organized by DMPK Interest Group); Don McKenzie and Mustafa Varoglu presiding
Room 309-310

One of the challenges faced by mass spectrometrists is the ability to efficiently gather and process data across multiple software platforms. Many scientists consider the advantages of having multiple types of mass spectrometers to leverage the benefits that each platform provides in data collection. Considerations like ion source diversity, trap vs. ToF vs. triple technology, degree and specificity of product ion formation etc. play into the strategy of building a high quality laboratory. With this in mind, it is common to equip laboratories with instrumentation from various vendors. However, many times a preferred procedure for data collection and/or processing can be limited or unavailable depending upon which vendor based set of hardware is employed. Reasons for this disparity can range from differences in vendor specific software capabilities to data collection and/or processing limitations incurred via patent restrictions. Further, having to train staff in the utilization of the various platforms can be time consuming and tie up limited resources. This workshop will focus on the various mechanisms used across labs to overcome software limitations as well as explore the idea of open source coding for DMPK mass spectrometry data analysis.

3. Characterization of Biologics by Mass Spectrometry (organized by Biotherapeutics Interest Group); Li Tao and Arindam Roy presiding
Room 314-317

This would be a forum to discuss current technical challenges and solutions for the characterization of protein therapeutics by mass spectrometry. Development of new methodologies to improve efficiency and robustness of mass spectrometric analysis will be discussed in this forum. Background information on several topics will be provided to initiate the discussion. Example of some topics for discussion would be
(1) Molecular variants analysis
(2) Degradation pathway identification
(3) Quantitative analysis of glycosylation
(4) Improving the speed of LC/MS analysis

4. Get Ready to Become a MS Rising Star (organized by Young Mass Spectrometrists Interest Group); Olga Friese and Dian Su presiding
Room 336

The workshop features a panel discussion on professional development. Topics will be focused on career planing and management, fundamental training, industrial internship, job search tools and interview strategies. The panel, consisting of representatives from government, industrial and academic organizations, will share their knowledge and practices on career prospects.

5. Have Quadrupole Ion Traps Passed their Prime Time? (organized by Ion Trap Interest Group); Yu Xia presiding
Room 337

In this workshop we will discuss the current status and possible future advancement of quadrupole ion traps, with relevance to the development of various types of mass analyzers. The following questions will be asked: 1. As a mass analyzer, how will ion traps compete with others and what are the critical technical advancements? 2. Structural confirmation by MS/MS vs. high resolution MS, any chance at all? 3. Ion trap as a reaction/storage vessel – what new capabilities are coming out of in research and what should be transferred to commercial instrument?

6. Advancements and Discussion of Mass Spectrometry Technology and Challenges within the Polymer and Material Fields (organized by Polymeric Materials Interest Group); Gyorgy Vas and William Erb presiding
Room 338

This workshop will focus on updating the group on recent work and challenges faced in the various fields such as academic, government, and industry. The focus of this group is polymer and material analysis utilizing various mass spectrometric techniques. This workshop will explore the various ways that polymers and materials are not only analyzed themselves but also how they interact with other materials such as patients, products, etc.

7. The Galaxy Framework for Biological MS Informatics: Practical Tips for Software Developers and Users; Tim Griffin presiding
Room 339-340

The open source Galaxy software framework is gaining momentum as a tool to solve biological MS informatics problems. WEDNESDAY WORKSHOPS, 5:45 - 7:00 PM continued

8. Using Mass Spectrometry to Characterize the Exposome and Its Impact on Human Health; Michael J. Van Stipdonk and H. M. Skip Kingston, Anthony Macherone presiding
Room 341-342

Two-thirds of global mortality is due to chronic disease with cardiovascular disease and cancers as the major causes. Investigations into the underlying factors for disease through genome-wide association studies and data mining have determined that the genetic heritability for these deaths is about 10%. This suggests that majority of causative factors for chronic human disease is not genetic but rather exposure to external and internal chemical entities and of these; only about 50% have been identified. The human exposome represents the totality of these exposures over individuals' lifetime and is a quantity of critical importance needed to understand their impact on disease. This workshop will define and encourage discussions on the human exposome and strategies for its measurement using multi-omics tools within the exposomics paradigm, with an emphasis on use of the exposomic information in guiding research to identify and validate new biomarkers of exposure and disease.

9. PowerPoint Design Tips and Tricks: How Your Slides Could be Hurting Your Talk and Your Message; Ikumi Kayama, MA Medical & Scientific Illustrator presiding
Room 343-344

Clarity in visual communication is as important to scientific meetings as clarity in writing is to journal articles. Most professors and researchers use PowerPoint to create presentations, but very few have taken a course in presentation design or layout. This workshop will offer PowerPoint design tips and tricks to make your presentation better-looking, easier to understand, and more memorable.

One of the most common misuses of PowerPoint slides are as a reading card or a vehicle for information overload. Some presenters make it more difficult to share their work because of hard-to-read slides/graphs and poor visuals. A professional illustrator and scientific communication specialist will teach simple yet effective ways to improve PowerPoint presentations to help professors, researchers, and students present their work more efficiently with better results.

10. Quantitative Glycomics; Yehia Mechref presiding
Room 345-346

Glycosylation of proteins and lipids is one of the most prevalent posttranslational modification with various biological attributes. The functions of many proteins are modulated by glycosylation while anomalous glycosylation has been associated with various mammalian diseases and biological processes. Therefore, the demands to understand the roles of glycans and to monitor the development and progression of diseases have necessitated the development of reliable quantitative glycomics and glycoproteomics methods. A critical discussion of the state-of-the-art glycomics and glycoproteomics methods will be presented at this workshop. Application of these methods to understanding diseases and biological processes will be also presented and discussed. Reliable quantitative glycomics and glycoproteomics is facilitated by bioinfomratics tools, an overview of which will be presented.

11. Current Trends, Gaps, and Needs in Workflows for Absolute Protein Quantitation by LC-MS; Nalini Sadagopan, Susan Abbatiello, Dawn Dufield presiding
Room 347-348

With increase in focus on biologic/biotherapeutic drugs by the pharmaceutical industry and also an increase in need for biomarkers (efficacy and safety) the deployment of LC-MS based techniques is on the rise primarily due to the speed in method development, and specificity of the technique. Scientists are finding new ways of doing sample prep to increase sensitivity/specificity, address reproducibility issues associated with enzymatic digestion and mass spectrometric methods to address specificity. The forum will provide a platform to share common themes, issues on these fronts and perhaps to surface newer needs in software, mass spec design, and automation.

12. Modern GCMS for Flavor, Fragrance and Foodstuffs Analysis: GC QQQ and GC HRMS (organized by Flavor Fragrance and Foodstuff Interest Group);

In the past 10 years there have been many developments in the instrumentation for the analysis of small molecules. With the evolution of GC QQQ and GC HRMS instrumentation, the confidence of quantification and identification of both constituents and contaminants found in flavors and fragrance agents and foodstuffs has increased significantly. After a few brief presentations we will discuss how we can use this instrumentation to improve our analyses.

13. Mass Spectrometry Applications in Art, cultural Heritage, and Natural History; Mehdi Moini, presiding
