CONSORT-EHEALTH (V 1.6.1) -Submission/Publication Form

The CONSORT-EHEALTH checklist is intended for authors of randomized trials evaluating webbased and Internet-based applications/interventions, including mobile interventions, electronic games (incl multiplayer games), social media, certain telehealth applications, and other interactive and/or networked electronic applications. Some of the items (e.g. all subitems under item 5 description of the intervention) may also be applicable for other study designs.

The goal of the CONSORT EHEALTH checklist and guideline is to be

a) a guide for reporting for authors of RCTs,

b) to form a basis for appraisal of an ehealth trial (in terms of validity)

CONSORT-EHEALTH items/subitems are MANDATORY reporting items for studies published in the Journal of Medical Internet Research and other journals / scientific societies endorsing the checklist.

Items numbered 1., 2., 3., 4a., 4b etc are original CONSORT or CONSORT-NPT (non-pharmacologic treatment) items.

Items with Roman numerals (i., ii, iii, iv etc.) are CONSORT-EHEALTH extensions/clarifications.

As the CONSORT-EHEALTH checklist is still considered in a formative stage, we would ask that you also RATE ON A SCALE OF 1-5 how important/useful you feel each item is FOR THE PURPOSE OF THE CHECKLIST and reporting guideline (optional).

Mandatory reporting items are marked with a red *.

In the textboxes, either copy & paste the relevant sections from your manuscript into this form please include any quotes from your manuscript in QUOTATION MARKS, or answer directly by providing additional information not in the manuscript, or elaborating on why the item was not relevant for this study.

YOUR ANSWERS WILL BE PUBLISHED AS A SUPPLEMENTARY FILE TO YOUR PUBLICATION IN JMIR AND ARE CONSIDERED PART OF YOUR PUBLICATION (IF ACCEPTED). Please fill in these questions diligently. Information will not be copyedited, so please use proper spelling and grammar, use correct capitalization, and avoid abbreviations.

DO NOT FORGET TO SAVE AS PDF _AND_ CLICK THE SUBMIT BUTTON SO YOUR ANSWERS ARE IN OUR DATABASE !!!

Citation Suggestion (if you append the pdf as Appendix we suggest to cite this paper in the caption): Eysenbach G, CONSORT-EHEALTH Group CONSORT-EHEALTH: Improving and Standardizing Evaluation Reports of Web-based and Mobile Health Interventions J Med Internet Res 2011;13(4):e126 URL: <u>http://www.jmir.org/2011/4/e126/</u> doi: 10.2196/jmir.1923 PMID: 22209829

*Vereist

Your name * First Last

Yvette Pronk

Primary Affiliation (short), City, Country *

University of Toronto, Toronto, Canada

Research Department, Kliniek ViaSana, I

Your e-mail address *

abc@gmail.com

y.pronk@viasana.nl

Title of your manuscript *

Provide the (draft) title of your manuscript.

Improved pain control and reduced opiate use after total knee replacement using a mobile e-health app: randomised controlled trial

Name of your App/Software/Intervention *

If there is a short and a long/alternate name, write the short name first and add the long name in brackets.

PainCoach app

Evaluated Version (if any)

e.g. "V1", "Release 2017-03-01", "Version 2.0.27913"

Version 2.7.1

Language(s) *

What language is the intervention/app in? If multiple languages are available, separate by comma (e.g. "English, French")

Dutch

URL of your Intervention Website or App

e.g. a direct link to the mobile app on app in appstore (itunes, Google Play), or URL of the website. If the intervention is a DVD or hardware, you can also link to an Amazon page.

https://viasanapijncoach.patientjourneya

URL of an image/screenshot (optional)

Jouw antwoord

Accessibility *

Can an enduser access the intervention presently?

- - access is free and open
 -) access only for special usergroups, not open
 - access is open to everyone, but requires payment/subscription/in-app purchases
 -) app/intervention no longer accessible
 - Anders:

Primary Medical Indication/Disease/Condition *

e.g. "Stress", "Diabetes", or define the target group in brackets after the condition, e.g. "Autism (Parents of children with)", "Alzheimers (Informal Caregivers of)"

Total knee replacement

Primary Outcomes measured in trial *

comma-separated list of primary outcomes reported in the trial

Primary outcomes were opiate use and '

Secondary/other outcomes

Are there any other outcomes the intervention is expected to affect?

Secondary outcomes were pain at rest, during activity and at night at one month after surgery; other pain medication use i.e. NSAID (Diclofenac), acetaminophen and/or Gabapentin; pain acceptance at rest, during activity and at night; experiences with the executed recommended physiotherapy exercises; function, quality of life, PainCoach app's perceived effectiveness (usability, added value, and likelihood of being recommended to others) and active PainCoach app use.

Recommended "Dose" *

What do the instructions for users say on how often the app should be used?

- Approximately Daily
- Approximately Weekly
- Approximately Monthly
- Approximately Yearly
- 🔵 "as needed"
- Anders: whenever they wanted until day 14 after surgery

Approx. Percentage of Users (starters) still using the app as recommended after 3 months *

- 0-10%
- 0 11-20%
- 21-30%
- 31-40%
- 0 41-50%
- 51-60%
- 61-70%
- 71%-80%
- 81-90%
- 91-100%
- Anders:

| Overall, was the app/intervention effective? * |
|--|
| O yes: all primary outcomes were significantly better in intervention group vs control |
| partly: SOME primary outcomes were significantly better in intervention group vs control |
| \bigcirc no statistically significant difference between control and intervention |
| O potentially harmful: control was significantly better than intervention in one or more outcomes |
| O inconclusive: more research is needed |
| O Anders: |
| Article Preparation Status/Stage * |
| At which stage in your article preparation are you currently (at the time you fill in this form) |
| |
| At which stage in your article preparation are you currently (at the time you fill in this form) |
| At which stage in your article preparation are you currently (at the time you fill in this form) not submitted yet - in early draft status |
| At which stage in your article preparation are you currently (at the time you fill in this form) not submitted yet - in early draft status not submitted yet - in late draft status, just before submission |
| At which stage in your article preparation are you currently (at the time you fill in this form) not submitted yet - in early draft status not submitted yet - in late draft status, just before submission submitted to a journal but not reviewed yet |
| At which stage in your article preparation are you currently (at the time you fill in this form) not submitted yet - in early draft status not submitted yet - in late draft status, just before submission submitted to a journal but not reviewed yet submitted to a journal and after receiving initial reviewer comments |

Journal *

If you already know where you will submit this paper (or if it is already submitted), please provide the journal name (if it is not JMIR, provide the journal name under "other")

- not submitted yet / unclear where I will submit this
- Journal of Medical Internet Research (JMIR)
- JMIR mHealth and UHealth
-) JMIR Serious Games
- JMIR Mental Health
- JMIR Public Health
- JMIR Formative Research
- Other JMIR sister journal
- Anders:

Is this a full powered effectiveness trial or a pilot/feasibility trial?

- Pilot/feasibility
- Fully powered

Manuscript tracking number *

If this is a JMIR submission, please provide the manuscript tracking number under "other" (The ms tracking number can be found in the submission acknowledgement email, or when you login as author in JMIR. If the paper is already published in JMIR, then the ms tracking number is the fourdigit number at the end of the DOI, to be found at the bottom of each published article in JMIR)

no ms number (yet) / not (yet) submitted to / published in JMIR

Anders:

"total knee replacement"

1b) ABSTRACT: Structured summary of trial design, methods, results, and conclusions

NPT extension: Description of experimental treatment, comparator, care providers, centers, and blinding status.

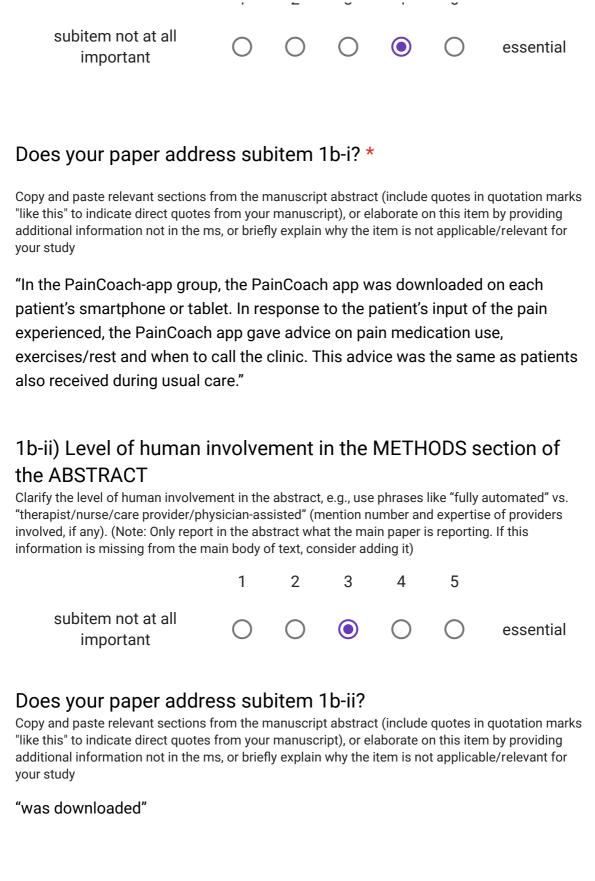

1b-i) Key features/functionalities/components of the intervention and comparator in the METHODS section of the ABSTRACT

Mention key features/functionalities/components of the intervention and comparator in the abstract. If possible, also mention theories and principles used for designing the site. Keep in mind the needs of systematic reviewers and indexers by including important synonyms. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

4

5

1

1b-iii) Open vs. closed, web-based (self-assessment) vs. face-toface assessments in the METHODS section of the ABSTRACT

Mention how participants were recruited (online vs. offline), e.g., from an open access website or from a clinic or a closed online user group (closed usergroup trial), and clarify if this was a purely web-based trial, or there were face-to-face components (as part of the intervention or for assessment). Clearly say if outcomes were self-assessed through questionnaires (as common in web-based trials). Note: In traditional offline trials, an open trial (open-label trial) is a type of clinical trial in which both the researchers and participants know which treatment is being administered. To avoid confusion, use "blinded" or "unblinded" to indicated the level of blinding instead of "open", as "open" in web-based trials usually refers to "open access" (i.e. participants can self-enrol). (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

Does your paper address subitem 1b-iii?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"In an unblinded randomised controlled trial patients planned for TKR were offline recruited". Outcomes were self-assessed "Primary outcomes ... by online questionnaires. Actual amount of app use was recorded;".

1b-iv) RESULTS section in abstract must contain use data

Report number of participants enrolled/assessed in each group, the use/uptake of the intervention (e.g., attrition/adherence metrics, use over time, number of logins etc.), in addition to primary/secondary outcomes. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

Does your paper address subitem 1b-iv?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for

your study

"PainCoach-app group (n=38) ... the control group (n=33)" and "PainCoach app was used 12 (IQR 4.5-22.0) times per patient."

1b-v) CONCLUSIONS/DISCUSSION in abstract for negative trials

Conclusions/Discussions in abstract for negative trials: Discuss the primary outcome - if the trial is negative (primary outcome not changed), and the intervention was not used, discuss whether negative results are attributable to lack of uptake and discuss reasons. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

| | 1 | 2 | 3 | 4 | 5 | |

N/A

2a) In INTRODUCTION: Scientific background and explanation of rationale

2a-i) Problem and the type of system/solution

Describe the problem and the type of system/solution that is object of the study: intended as standalone intervention vs. incorporated in broader health care program? Intended for a particular patient population? Goals of the intervention, e.g., being more cost-effective to other interventions, replace or complement other solutions? (Note: Details about the intervention are provided in "Methods" under 5)

Does your paper address subitem 2a-i? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Less is known about pain and opiate use at home directly after total knee replacement (TKR). Regarding side effects, low opiate use is desired. An e-health application, PainCoach app, was developed to guide patients in pain control and opiate use."

2a-ii) Scientific background, rationale: What is known about the (type of) system

Scientific background, rationale: What is known about the (type of) system that is the object of the study (be sure to discuss the use of similar systems for other conditions/diagnoses, if appropiate), motivation for the study, i.e. what are the reasons for and what is the context for this specific study, from which stakeholder viewpoint is the study performed, potential impact of findings [2]. Briefly justify the choice of the comparator.

Does your paper address subitem 2a-ii? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"So-called electronic-health (e-health) applications (apps) can be used to guide patients in improving their pain management strategies at home. An important benefit of these apps is that patients can access the information provided directly and anywhere whenever necessary. The number of older adults with internet access and acceptance of internet-based interventions is increasing and patients tend to remember up to 80% of information acquired from interactive education."

2b) In INTRODUCTION: Specific objectives or hypotheses

Does your paper address CONSORT subitem 2b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"This study aimed to determine the effect of the PainCoach app on pain and opiate use in TKR patients in the first two weeks at home after surgery. The hypothesis was that the use of this app would decrease pain and opiate use."

3a) Description of trial design (such as parallel, factorial) including allocation ratio

Does your paper address CONSORT subitem 3a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"An unblinded randomised controlled single centre trial (RCT)"

3b) Important changes to methods after trial commencement (such as eligibility criteria), with reasons

Does your paper address CONSORT subitem 3b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

No changes were made to methods after trial commencement.

3b-i) Bug fixes, Downtimes, Content Changes

Bug fixes, Downtimes, Content Changes: ehealth systems are often dynamic systems. A description of changes to methods therefore also includes important changes made on the intervention or comparator during the trial (e.g., major bug fixes or changes in the functionality or content) (5-iii) and other "unexpected events" that may have influenced study design such as staff changes, system failures/downtimes, etc. [2].

| | 1 | 2 | 3 | 4 | 5 | |
|---------------------------------|---|---|---|---|---|-----------|
| subitem not at all important | 0 | 0 | ۲ | 0 | 0 | essential |

Does your paper address subitem 3b-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

N/A

Does your paper address CONSORT subitem 4a? *

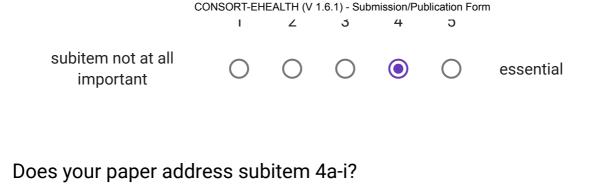

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Patients with an American Society of Anaesthesiologists (ASA) score of I-II, body mass index (BMI) ≤35 kg/m2 and planned to undergo primary TKR between February and June 2016 were enrolled." and "Patients were excluded if they did not possess a smartphone or tablet, had a contra-indication to any of the medication used in the study, no email address, no internet at home, did not have a thorough command of the Dutch language, were suffering from memory disorders, or had surgery under general anaesthesia."

4a-i) Computer / Internet literacy

Computer / Internet literacy is often an implicit "de facto" eligibility criterion - this should be explicitly clarified.

E

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Patients were excluded if they did not possess a smartphone or tablet, ..., no email address, no internet at home,"

4a-ii) Open vs. closed, web-based vs. face-to-face assessments:

Open vs. closed, web-based vs. face-to-face assessments: Mention how participants were recruited (online vs. offline), e.g., from an open access website or from a clinic, and clarify if this was a purely web-based trial, or there were face-to-face components (as part of the intervention or for assessment), i.e., to what degree got the study team to know the participant. In online-only trials, clarify if participants were quasi-anonymous and whether having multiple identities was possible or whether technical or logistical measures (e.g., cookies, email confirmation, phone calls) were used to detect/prevent these.

Does your paper address subitem 4a-ii? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Patients were recruited by phone by the research staff after being planned to undergo primary TKR under spinal anaesthesia, and contra-indication to any of the medication used in the study and suffering from memory disorders were checked by the anaesthesiologists. Possessing a smartphone or tablet, having an email address, having internet at home and having a thorough command of the Dutch language were asked by phone. Patients information and informed consent were sent by postal service if a patient met the criteria and was interested to participate."

4a-iii) Information giving during recruitment

Information given during recruitment. Specify how participants were briefed for recruitment and in the informed consent procedures (e.g., publish the informed consent documentation as appendix, see also item X26), as this information may have an effect on user self-selection, user expectation and may also bias results.

| | 1 | 2 | 3 | 4 | 5 | |
|---------------------------------|---|---|---|---|---|-----------|

Does your paper address subitem 4a-iii?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Patients were recruited by phone ... Patients information and informed consent were sent by postal service if a patient met the criteria and was interested to participate."

4b) Settings and locations where the data were collected

Does your paper address CONSORT subitem 4b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Kliniek ViaSana (Mill, The Netherlands)"

4b-i) Report if outcomes were (self-)assessed through online questionnaires

Clearly report if outcomes were (self-)assessed through online questionnaires (as common in webbased trials) or otherwise.

Does your paper address subitem 4b-i? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Beside the actual amount of app use, all the outcome measurements were collected using online questionnaires (OnlinePROMs, Interactive Studios, Rosmalen, The Netherlands)." and "Each downloaded app had its own app code which was used to record the actual amount of app use."

4b-ii) Report how institutional affiliations are displayed

Report how institutional affiliations are displayed to potential participants [on ehealth media], as affiliations with prestigious hospitals or universities may affect volunteer rates, use, and reactions with regards to an intervention.(Not a required item – describe only if this may bias results)

| | 1 | 2 | 3 | 4 | 5 | |

| subitem not at all important | \bigcirc | 0 | 0 | ۲ | \bigcirc | essential |

Does your paper address subitem 5-ii?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

The PainCoach app is based on the same software as the Patient Journey App. The Patient Journey App is used for several years.

5-iii) Revisions and updating

Revisions and updating. Clearly mention the date and/or version number of the application/intervention (and comparator, if applicable) evaluated, or describe whether the intervention underwent major changes during the evaluation process, or whether the development and/or content was "frozen" during the trial. Describe dynamic components such as news feeds or changing content which may have an impact on the replicability of the intervention (for unexpected events see item 3b).

| | 1 | 2 | 3 | 4 | 5 | |

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"During the study no major changes or revisions to the PainCoach app were executed."

5-iv) Quality assurance methods

Provide information on quality assurance methods to ensure accuracy and quality of information provided [1], if applicable.

| | 1 | 2 | 3 | 4 | 5 | |
|---------------------------------|---|---|------------|---|---|-----------|
| subitem not at all important | 0 | 0 | \bigcirc | ۲ | 0 | essential |

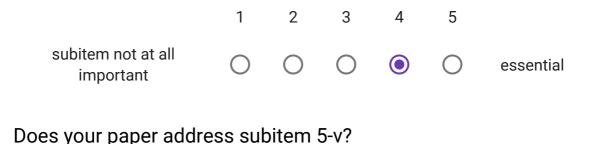

Does your paper address subitem 5-iv?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

This is part of the software development executed by the developing company. The PainCoach app is based on the same software as the Patient Journey App. The Patient Journey App is used for several years.

5-v) Ensure replicability by publishing the source code, and/or providing screenshots/screen-capture video, and/or providing flowcharts of the algorithms used

Ensure replicability by publishing the source code, and/or providing screenshots/screen-capture video, and/or providing flowcharts of the algorithms used. Replicability (i.e., other researchers should in principle be able to replicate the study) is a hallmark of scientific reporting.

to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

See appendix 2.

5-vi) Digital preservation

Digital preservation: Provide the URL of the application, but as the intervention is likely to change or disappear over the course of the years; also make sure the intervention is archived (Internet Archive, <u>webcitation.org</u>, and/or publishing the source code or screenshots/videos alongside the article). As pages behind login screens cannot be archived, consider creating demo pages which are accessible without login.

Does your paper address subitem 5-vi?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

See https://viasanapijncoach.patientjourneyapp.com/preview.

5-vii) Access

Access: Describe how participants accessed the application, in what setting/context, if they had to pay (or were paid) or not, whether they had to be a member of specific group. If known, describe how participants obtained "access to the platform and Internet" [1]. To ensure access for editors/reviewers/readers, consider to provide a "backdoor" login account or demo mode for reviewers/readers to explore the application (also important for archiving purposes, see vi).

| | 1 | 2 | 3 | 4 | 5 | |
|---------------------------------|------------|---|------------|---|---|-----------|
| subitem not at all important | \bigcirc | 0 | \bigcirc | 0 | ۲ | essential |

Does your paper address subitem 5-vii? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"In the PainCoach-app group, in addition to receiving the aforementioned usual care, the PainCoach app (Interactive Studios, Rosmalen, The Netherlands) was downloaded on each patient's smartphone or tablet using an unique download code by a nurse. In this way, the PainCoach app was not available to the control group."

5-viii) Mode of delivery, features/functionalities/components of the intervention and comparator, and the theoretical framework

Describe mode of delivery, features/functionalities/components of the intervention and comparator, and the theoretical framework [6] used to design them (instructional strategy [1], behaviour change techniques, persuasive features, etc., see e.g., [7, 8] for terminology). This includes an in-depth description of the content (including where it is coming from and who developed it) [1]," whether [and how] it is tailored to individual circumstances and allows users to track their progress and receive feedback" [6]. This also includes a description of communication delivery channels and – if computer-mediated communication is a component – whether communication was synchronous or asynchronous [6]. It also includes information on presentation strategies [1], including page design principles, average amount of text on pages, presence of hyperlinks to other resources, etc. [1].

| | 1 | 2 | 3 | 4 | 5 | |

"The app gave the same advice as patients also received during usual care. After only entering the date of surgery as patients' data, the app allowed patients to input their pain level (no pain, bearable pain, unbearable pain, or untenable pain) whenever they wanted until day 14 after surgery. Based on the patient's input, taking into account the amount of days after surgery, the app then advised on pain medication use, physiotherapy exercises including videos, use of ice or heat packs, rest, immobilising the operated leg, and when to call the clinic (Appendix 2)."

5-ix) Describe use parameters

Describe use parameters (e.g., intended "doses" and optimal timing for use). Clarify what instructions or recommendations were given to the user, e.g., regarding timing, frequency, heaviness of use, if any, or was the intervention used ad libitum.

| | 1 | 2 | 3 | 4 | 5 | |
|---------------------------------|------------|---|---|---|---|-----------|
| subitem not at all important | \bigcirc | 0 | 0 | ۲ | 0 | essential |

Does your paper address subitem 5-ix?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"the app allowed patients to input their pain level (no pain, bearable pain, unbearable pain, or untenable pain) whenever they wanted until day 14 after surgery."

5-x) Clarify the level of human involvement

Clarify the level of human involvement (care providers or health professionals, also technical assistance) in the e-intervention or as co-intervention (detail number and expertise of professionals involved, if any, as well as "type of assistance offered, the timing and frequency of the support, how it is initiated, and the medium by which the assistance is delivered". It may be necessary to distinguish between the level of human involvement required for the trial, and the level of human involvement required for a routine application outside of a RCT setting (discuss under item 21 – generalizability).

Does your paper address subitem 5-x?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"In the PainCoach-app group, ... the PainCoach app ... was downloaded on each patient's smartphone or tablet using an unique download code by a nurse."

5-xi) Report any prompts/reminders used

Report any prompts/reminders used: Clarify if there were prompts (letters, emails, phone calls, SMS) to use the application, what triggered them, frequency etc. It may be necessary to distinguish between the level of prompts/reminders required for the trial, and the level of prompts/reminders for a routine application outside of a RCT setting (discuss under item 21 – generalizability).

| | 1 | 2 | 3 | 4 | 5 | |
|---------------------------------|---|---|---|---|---|-----------|
| subitem not at all important | 0 | 0 | 0 | ۲ | 0 | essential |

Does your paper address subitem 5-xi? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

As patients could use the app "whenever they wanted until day 14 after surgery." no prompts/reminders were used.

5-xii) Describe any co-interventions (incl. training/support)

Describe any co-interventions (incl. training/support): Clearly state any interventions that are provided in addition to the targeted eHealth intervention, as ehealth intervention may not be designed as stand-alone intervention. This includes training sessions and support [1]. It may be necessary to distinguish between the level of training required for the trial, and the level of training for a routine application outside of a RCT setting (discuss under item 21 – generalizability.

Does your paper address subitem 5-xii? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"In the PainCoach-app group, ... the PainCoach app ... was downloaded on each patient's smartphone or tablet using an unique download code by a nurse."

6a) Completely defined pre-specified primary and secondary outcome measures, including how and when they were assessed

Does your paper address CONSORT subitem 6a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Beside the actual amount of app use, all the outcome measurements were collected using online questionnaires (OnlinePROMs, Interactive Studios, Rosmalen, The Netherlands).

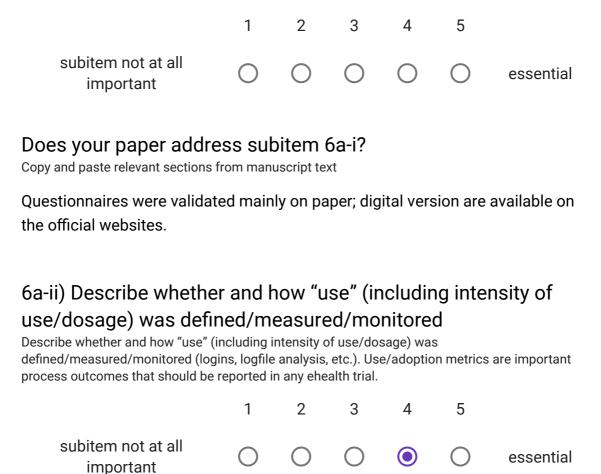

Primary outcomes were opiate use and pain in the operated knee at rest, during activity, and at night score in the first two weeks at home after TKR. Pain score was measured on a Visual Analogue Scale (VAS pain) from 0 (no pain) to 100 (worst imaginable pain) preoperatively, daily from day 1 to 14, and at 1 month after surgery. Severe pain was defined as VAS pain score from 70 to 100. Opiate (Oxycodon; 5 mg per tablet) use was recorded in quantities per 24 hours from day 1 to 14.

Secondary outcomes were other pain medication use i.e. NSAID (Diclofenac), acetaminophen and/or Gabapentin, also recorded in quantities per 24 hours from day 1 to 14. Pain acceptance at rest, during activity and at night was assessed with a happy smiley (acceptable pain) and a sad smiley (unacceptable pain) preoperatively, daily from day 1 to 14, and at 1 month. Experiences with the executed recommended physiotherapy exercises were recorded daily from day 1 to 14 on a 3-item scale; did too much, exactly enough, or could have done more exercises. Function and quality of life were measured preoperatively and 1 month after surgery. Knee function was assessed using the Knee injury and Osteoarthritis Outcome Score - Physical Function Short-form (KOOS-PS) on a scale from 0 (no difficulty) to 100 (extreme difficulty). The Oxford Knee Score (OKS) was used to measure combined function and pain on a scale from 0 (most severe symptoms) to 48 (least severe symptoms). Quality of life was measured using the EuroQol-5D 3 level version (EQ-5D-3L) questionnaire consisting of two scores: EQ Visual Analogue Scale (EQ VAS) score, on a scale from 0 (worst imaginable health state) to 100 (best imaginable health state), and EQ-5D descriptive system (EQ-5D index). The PainCoach app's perceived effectiveness (usability, added value, and likelihood of being recommended to others) was recorded on a 5-item scale ranging from totally agree to totally disagree at day 14 after surgery. Each downloaded app had its own app code which was used to record the actual amount of app use. As the admission period generally existed of 1 or 2 days, primary outcomes were measured till day 14 after surgery and outcomes at home were investigated, active PainCoach-app use as an outcome was defined as using the app at least 12 times in total.

Preoperative opiate and other pain medication use, age, gender, ASA score, BMI, preoperative co-morbidities, history of previous knee surgery, Charnley score, date of surgery, date of discharge and complications were collected from the electronic patient records. Pain coping, anxiety, education level and marital status were also obtained preoperatively using the online questionnaire. Pain coping was measured using the pain coping and cognition list (PCCL) scored from 1 (totally disagree) to 6 (totally agree) and existed of four categories: catastrophizing, pain coping, internal pain management, and external pain management."

6a-i) Online questionnaires: describe if they were validated for online use and apply CHERRIES items to describe how the questionnaires were designed/deployed

If outcomes were obtained through online questionnaires, describe if they were validated for online use and apply CHERRIES items to describe how the questionnaires were designed/deployed [9].

Does your paper address subitem 6a-ii?

8a) Method used to generate the random allocation sequence

NPT: When applicable, how care providers were allocated to each trial group

Does your paper address CONSORT subitem 8a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

CONSORT-EHEALTH (V 1.6.1) - Submission/Publication Form

"Included patients were randomly assigned to the PainCoach-app or control group using sealed envelopes supplied by a nurse during admission."

8b) Type of randomisation; details of any restriction (such as blocking and block size)

Does your paper address CONSORT subitem 8b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

There was no restriction on the randomisation.

9) Mechanism used to implement the random allocation sequence (such as sequentially numbered containers), describing any steps taken to conceal the sequence until interventions were assigned

Does your paper address CONSORT subitem 9? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Included patients were randomly assigned to the PainCoach-app or control group using sealed envelopes supplied by a nurse during admission."

10) Who generated the random allocation sequence, who enrolled participants, and who assigned participants to interventions

Does your paper address CONSORT subitem 10? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Patients were recruited by phone by the research staff after being planned to undergo primary TKR under spinal anaesthesia, and contra-indication to any of the medication used in the study and suffering from memory disorders were checked by the anaesthesiologists. Possessing a smartphone or tablet, having an email address, having internet at home and having a thorough command of the Dutch language were asked by phone. Patients information and informed consent were sent by postal service if a patient met the criteria and was interested to participate." and "Included patients were randomly assigned to the PainCoach-app or control group using sealed envelopes supplied by a nurse during admission."

11a) If done, who was blinded after assignment to interventions (for example, participants, care providers, those assessing outcomes) and how

NPT: Whether or not administering co-interventions were blinded to group assignment

11a-i) Specify who was blinded, and who wasn't

Specify who was blinded, and who wasn't. Usually, in web-based trials it is not possible to blind the participants [1, 3] (this should be clearly acknowledged), but it may be possible to blind outcome assessors, those doing data analysis or those administering co-interventions (if any).

Does your paper address subitem 11a-i?*

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"unblinded randomised controlled trial"

11a-ii) Discuss e.g., whether participants knew which intervention was the "intervention of interest" and which one was the "comparator"

Informed consent procedures (4a-ii) can create biases and certain expectations - discuss e.g., whether participants knew which intervention was the "intervention of interest" and which one was the "comparator".

12a) Statistical methods used to compare groups for primary and secondary outcomes

.

Does your paper address CONSORT subitem 12a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Analysis was performed using SPSS version 25.0 (IBM Corp; Armonk, New York). All measured outcomes from day 1 till day 14 after surgery were recoded into measured outcomes for days at home by subtraction of admission period. Patient characteristics were analysed using descriptive statistics and data were checked for normal distributions. Differences in mean, median or percentage were tested using independent two-sample t-test, Mann-Whitney U, Likelihood, Fisher's or Pearson's chi-squared test, depending on the type of data. Mixed linear models were used to analyse the overall rate of decrease or increase for continuous data and generalized linear models were used to analyse the percentage decrease or increase for count and nominal data. Additional analysis was performed to compare the active PainCoach-app subgroup with the control group; corrected for differences in preoperative data. Statistical significance was set at P<.05 and trends were defined as .05<P<.10."

12a-i) Imputation techniques to deal with attrition / missing values

Imputation techniques to deal with attrition / missing values: Not all participants will use the intervention/comparator as intended and attrition is typically high in ehealth trials. Specify how participants who did not use the application or dropped out from the trial were treated in the statistical analysis (a complete case analysis is strongly discouraged, and simple imputation techniques such as LOCF may also be problematic [4]).

17a) For each primary and secondary outcome, results for each group, and the estimated effect size and its precision (such as 95% confidence interval)

Does your paper address CONSORT subitem 17a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"During the first two weeks at home, the PainCoach-app group was characterised by VAS pain score at rest of 17.0 (IQR 5.0-30.0), 20.0 (IQR 7.0-35.0) during activity and 17.0 (IQR 4.0-37.0) at night. In the control group, VAS pain score at rest was 20.0 (IQR 7.0-33.0), 21.0 (IQR 10.0-38.0) during activity and 20.5 (IQR 8.0-40.0) at night. Of the PainCoach-app group 8 (21%) patients classified their pain as severe on one or more days compared with 10 (30%) of the control group. No statistically significant differences were found between both groups on VAS pain scores at rest and during activity for the first two weeks at home (Figure 2A-B). VAS pain score at night showed a trend for a 3.0 times faster decrease in the PainCoach-app group compared with the control group (P=.06)(Figure 2C). Regarding opiate use, the PainCoach-app group was characterised by mean 0.4 (SD 0.7) tablets a day and the control group by mean 0.5 (SD 0.8) tablets a day. Opiate use was statistically significantly reduced with 23.2% in the PainCoach-app group compared with the control group (95%Cl -38.3--4.4; P=.02)(Figure 2A-C). One month after surgery, no statistically significant differences on VAS pain scores were found between the PainCoachapp group and control group." and

"In the PainCoach-app group there was a trend towards 9.2% reduced NSAID use (95%Cl -18.5-1.3; P=.08), statistically significantly 14.6% more acetaminophen use (95%Cl 8.2-21.3; P<.001), and no statistically significant difference for gabapentin use compared with the control group. Overall pain medication use was below advised maximum in both groups. Pain acceptance at rest was 86.5%, 86.5% during activity and 79.4% at night in the PainCoach-app group and in the control group 90.4% at rest, 88.6% during activity and 83.0% at night, no statistically significant differences between both groups were found. Regarding experience with executed recommended exercises, the PainCoach-app group reported statistically significantly 33.1% reduced experience with executing exactly enough exercises compared with the control group (95%Cl -52.0--6.7; P=.02); 69.7% compared with 77.5% respectively. At one month after surgery, no statistically significant differences were found on pain acceptance at rest, during activity and at night, KOOS-PS, OKS, EQ-5D index and EQ VAS when comparing both groups."

17a-i) Presentation of process outcomes such as metrics of use and intensity of use

In addition to primary/secondary (clinical) outcomes, the presentation of process outcomes such as metrics of use and intensity of use (dose, exposure) and their operational definitions is critical. This does not only refer to metrics of attrition (13-b) (often a binary variable), but also to more continuous exposure metrics such as "average session length". These must be accompanied by a technical description how a metric like a "session" is defined (e.g., timeout after idle time) [1] (report under item 6a).

Does your paper address subitem 17a-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Twenty-five (89%) patients reported ease of use of the app, 22 (79%) patients found the app of added value and 22 (79%) patients would recommend the app to friends and family. The PainCoach app was used 12 (IQR 4.5-22.0) times per patient. The app was most frequently used between 9 and 10 am and mostly for advice on bearable pain."

17b) For binary outcomes, presentation of both absolute and relative effect sizes is recommended

Does your paper address CONSORT subitem 17b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

See the answer on question 17a.

18) Results of any other analyses performed, including subgroup analyses and adjusted analyses, distinguishing pre-specified from exploratory

Does your paper address CONSORT subitem 18?*

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Adjusted analyses showed that the active PainCoach-app subgroup was characterised by VAS pain score at rest of 10.0 (IQR 4.0-26.3), 12.0 (IQR 5.0-25.0) during activity and 10.0 (IQR 2.8-28.0) at night during the first two weeks at home. Three patients (16%) reported their pain as severe on one or more days. VAS pain score during activity statistically significantly decreased 4.1 times faster compared with the control group (95%Cl -7.5--0.8; P=.02)(Figure 2E). VAS pain score at night statistically significantly decreased 6.3 times faster in the active PainCoach-app subgroup compared with the control group (95%Cl -10.1--2.6; P=.001)(Figure 2F). Mean opiate use of 0.3 (SD 0.5) tablets a day characterised the active PainCoach-app subgroup. Opiate use was statistically significantly reduced with 44.3% in this subgroup compared with the control group (95%Cl -59.4--23.5; P<.001)(Figure 2D-F). One month after surgery, no statistically significant differences in VAS pain scores were found comparing the active PainCoach-app subgroup with the control group." and "Adjusted analyses for comparing the active PainCoach-app subgroup with the control group showed a statistically significantly increased acetaminophen use of 21.0% in the active PainCoach-app subgroup (95%Cl 12.6-30.0; P<.001). In the active PainCoach-app subgroup there was a trend towards 12.8% reduced NSAID use compared with the control group (95%Cl -24.3-0.4; P=.06). Statistically significantly decreased gabapentin use of 76.3% was found in the active PainCoach-app subgroup characterised by mean 0.1 (SD 0.3) tablets a day compared with mean 0.4 (SD 1.0) tablets a day in the control group (95%Cl -86.0--59.8; P<.001). In the active PainCoach-app subgroup pain acceptance at rest was 88.4%, 90.9% during activity and 87.4% at night. Regarding pain acceptance and experience with executed recommended exercises, no statistically significant differences were found between the active PainCoach-app subgroup and control group. One month after surgery, KOOS-PS was statistically significantly lower in the active PainCoach-app subgroup (33.5 (SD 8.4)) compared with the control group (39.6 (SD 9.8))(P=.048). No statistically significant differences were found for pain acceptance at rest, during activity and at night, OKS, EQ-5D index and EQ VAS between both groups one month after surgery."

18-i) Subgroup analysis of comparing only users

A subgroup analysis of comparing only users is not uncommon in ehealth trials, but if done, it must be stressed that this is a self-selected sample and no longer an unbiased sample from a randomized trial (see 16-iii).

Does your paper address subitem 18-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

See the answer on question 18.

19) All important harms or unintended effects in each group

(for specific guidance see CONSORT for harms)

Does your paper address CONSORT subitem 19?*

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

There were no harms.

19-i) Include privacy breaches, technical problems

Include privacy breaches, technical problems. This does not only include physical "harm" to participants, but also incidents such as perceived or real privacy breaches [1], technical problems, and other unexpected/unintended incidents. "Unintended effects" also includes unintended positive effects [2].

Does your paper address subitem 19-i?

CONSORT-EHEALTH (V 1.6.1) - Submission/Publication Form

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

There were no privacy breaches of technical problems.

19-ii) Include qualitative feedback from participants or observations from staff/researchers

Include qualitative feedback from participants or observations from staff/researchers, if available, on strengths and shortcomings of the application, especially if they point to unintended/unexpected effects or uses. This includes (if available) reasons for why people did or did not use the application as intended by the developers.

Does your paper address subitem 19-ii?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

N/A besides the quality feedback reported in the results section: "Twenty-five (89%) patients reported ease of use of the app, 22 (79%) patients found the app of added value and 22 (79%) patients would recommend the app to friends and family."

DISCUSSION

22) Interpretation consistent with results, balancing benefits and harms, and considering other relevant evidence

NPT: In addition, take into account the choice of the comparator, lack of or partial blinding, and unequal expertise of care providers or centers in each group

22-i) Restate study questions and summarize the answers suggested by the data, starting with primary outcomes and process outcomes (use)

1

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"This study aimed to determine the effect of an e-health app, the PainCoach app, on pain and opiate use in TKR patients. The hypothesis was that the app would decrease pain and opiate use in the first 2 weeks at home after surgery. As indicated by the main findings, there was no statistically significant difference in pain scores between both groups and opiate use was statistically significantly reduced with 23.2% in the PainCoach-app group compared with the control group. In the active PainCoach-app subgroup, however, pain during activity and at night statistically significantly decreased respectively 4.1 and 6.3 times faster and opiate use statistically significantly reduced by 44.3% compared with the control group."

22-ii) Highlight unanswered new questions, suggest future research

Highlight unanswered new questions, suggest future research.

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Future research might be focused on a larger sample size, determination of the cost-effectiveness of the app and using the app in such population that have much higher preoperative opiate use."

20) Trial limitations, addressing sources of potential bias, imprecision, and, if relevant, multiplicity of analyses

20-i) Typical limitations in ehealth trials

Typical limitations in ehealth trials: Participants in ehealth trials are rarely blinded. Ehealth trials often look at a multiplicity of outcomes, increasing risk for a Type I error. Discuss biases due to non-use of the intervention/usability issues, biases through informed consent procedures, unexpected events.

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Shortcomings are that the additional analysis was underpowered and the costeffectiveness of the PainCoach app was not investigated."

21) Generalisability (external validity, applicability) of the trial findings

NPT: External validity of the trial findings according to the intervention, comparators, patients, and care providers or centers involved in the trial

21-i) Generalizability to other populations

Generalizability to other populations: In particular, discuss generalizability to a general Internet population, outside of a RCT setting, and general patient population, including applicability of the study results for other organizations

Does your paper address subitem 21-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"In the current study populations opiate use was already low, the app might have a much stronger effect in patient populations where preoperative opiate use is much higher. Future research might be focused on ... using the app in such population that have much higher preoperative opiate use."

21-ii) Discuss if there were elements in the RCT that would be different in a routine application setting

Discuss if there were elements in the RCT that would be different in a routine application setting (e.g., prompts/reminders, more human involvement, training sessions or other co-interventions) and what impact the omission of these elements could have on use, adoption, or outcomes if the intervention is applied outside of a RCT setting.

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

There was no funding or other support.

X27) Conflicts of Interest (not a CONSORT item)

X27-i) State the relation of the study team towards the system being evaluated

In addition to the usual declaration of interests (financial or otherwise), also state the relation of the study team towards the system being evaluated, i.e., state if the authors/evaluators are distinct from or identical with the developers/sponsors of the intervention.

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the me, or briefly explain why the item is not applicable (relevant for your study of a complete relevant for your study of a complete relevant for your study of a complete relevant for your study of the item is not applicable (relevant for your study of a complete relevant for your study of the item is not applicable (relevant for your stud

"Conflicts of Interest. None declared."

As a result of using this checklist, did you make changes in your manuscript? *

- O yes, major changes
- yes, minor changes

What were the most important changes you made as a result of using this checklist?

Clearify some words as unblinded; adding "During the study no major changes or revisions to the PainCoach app were executed."

How much time did you spend on going through the checklist INCLUDING making changes in your manuscript *

5 hours

As a result of using this checklist, do you think your manuscript has improved? *

) no

Anders: a little bit.

Would you like to become involved in the CONSORT EHEALTH group?

This would involve for example becoming involved in participating in a workshop and writing an "Explanation and Elaboration" document

🔵 yes

🔵 no

Anders:

Any other comments or questions on CONSORT EHEALTH
