

Figure S3. Uchikawa *et al.*

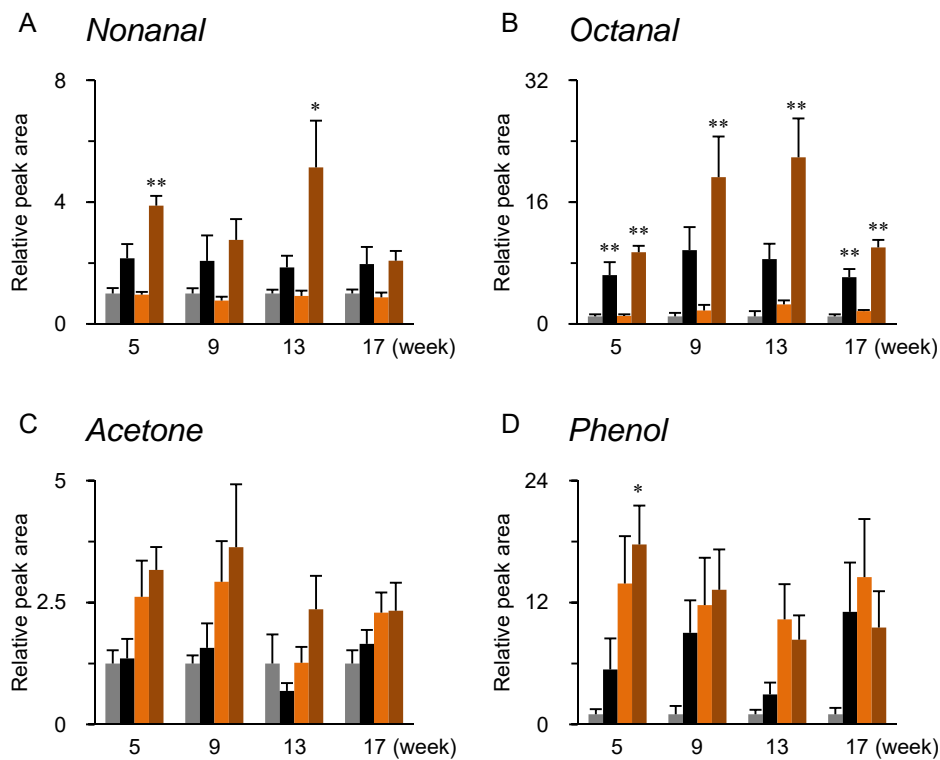

Figure S3. Fecal levels of nonanal (A), octanal (B), acetone (C), and phenol (D). VOCs in feces collected from BL_N (gray), BL_H (black), KK_N (orange), and KK_H (brown) groups at the indicated timepoints were determined by HSS-GC-MS. Relative peak areas were normalized to a value of 1 for BL_N at week 5. Data are the means \pm SEM (n=5). Significant difference; * $p < 0.05$, ** $p < 0.01$ compared with BL_N (gray bar) at each week by one-way ANOVA with post hoc test (Bonferroni).
