# Supplemental Figure 1

Figure S1. Comparison of digital platforms and histomorphometrist scoring

A)i Pearson's correlation coefficient comparing Platform-1 and Platform-3 values for positive cells/mm^2 counted across 56 NSCLC PDEs.

A)ii Bland-Altman plot comparing positive cells/mm^2 as determined by Platform-1 and Platform-3. The blue line indicates mean difference between positive counts, the green and red lines illustrate the upper and lower limits of agreement based on 95% CIs, respectively.

A)iii Passing-Bablok regression model illustrates a proportional difference in positive cells/mm^2 between Platform-1 and Platform-3.

B) Comparison of total positive cells counted within 8 FoVs by a histomorphometrist, Platform-1 and Platform-3. Wilcoxon paired test was performed for each comparison, with $p < 0.05$ considered significantly different
