Supplementary Material

2 **Table S1. Breakpoints used for susceptibility testing of *Campylobacter* species**

Class	Agent	Species	Range	ECOFF ^a (mg/L)
Aminoglycosides	Gentamicin	All	0.12 - 32	2
Ketolides	Telithromycin	All ^b	0.015 - 8	4
Lincosamide	Clindamycin	<i>C. coli</i>	0.03 - 16	1
		<i>C. jejuni</i>	0.03 - 16	0.5
Macrolides	Azithromycin	<i>C. coli</i>	0.015 - 64	0.5
		<i>C. jejuni</i>	0.015 - 64	0.25
	Erythromycin	<i>C. coli</i>	0.03 - 64	8
		<i>C. jejuni</i>	0.03 - 64	4
Phenicols	Florfenicol	All	0.03 - 64	4
Quinolones	Ciprofloxacin	All	0.015 - 64	0.5
	Nalidixic acid	All	4 - 64	16
Tetracyclines	Tetracycline	<i>C. coli</i>	0.06 - 64	2
		<i>C. jejuni</i>	0.06 - 64	1

3 ^a EUCAST epidemiological cut-off values (ECOFF) (mg/L)

4 ^b *C. coli* ECOFF derived from National Antimicrobial Resistance Monitoring System
5 (NARMS) programme, Centre for Disease Control and Prevention (CDC)

6 **Table S2. Distribution of minimum inhibitory concentrations for *Campylobacter jejuni* (n=108) isolated from Australian
7 meat chickens.**

Antimicrobial	Minimum inhibitory concentration (mg/L)													% Resistant (95% CI)	
	0.016	0.03	0.06	0.13	0.25	0.5	1	2	4	8	16	32	64	128	
Azithromycin	56.5	38.0	4.6	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.9	0.9 (0.0 – 5.1)

-	9435	1		S
-	-	3		S

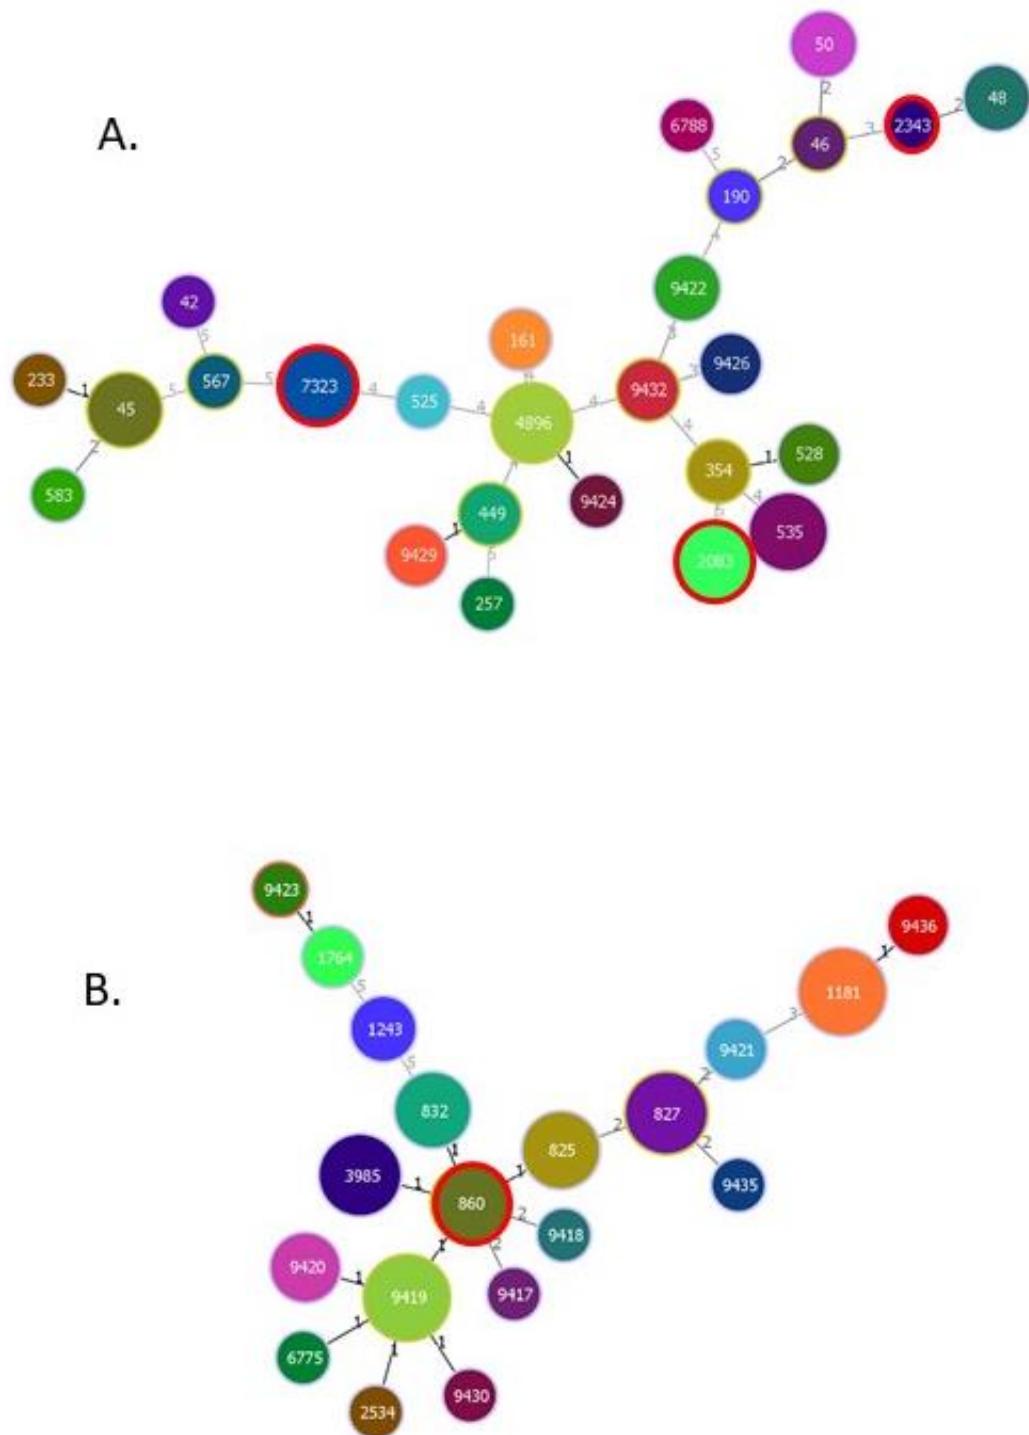

24 Isolates grouped by MLST with the resistant isolates above the line. Gaps represent no
25 presence. S-sensitive; R-resistant. QRDR; quinolone resistance-determining region.

26

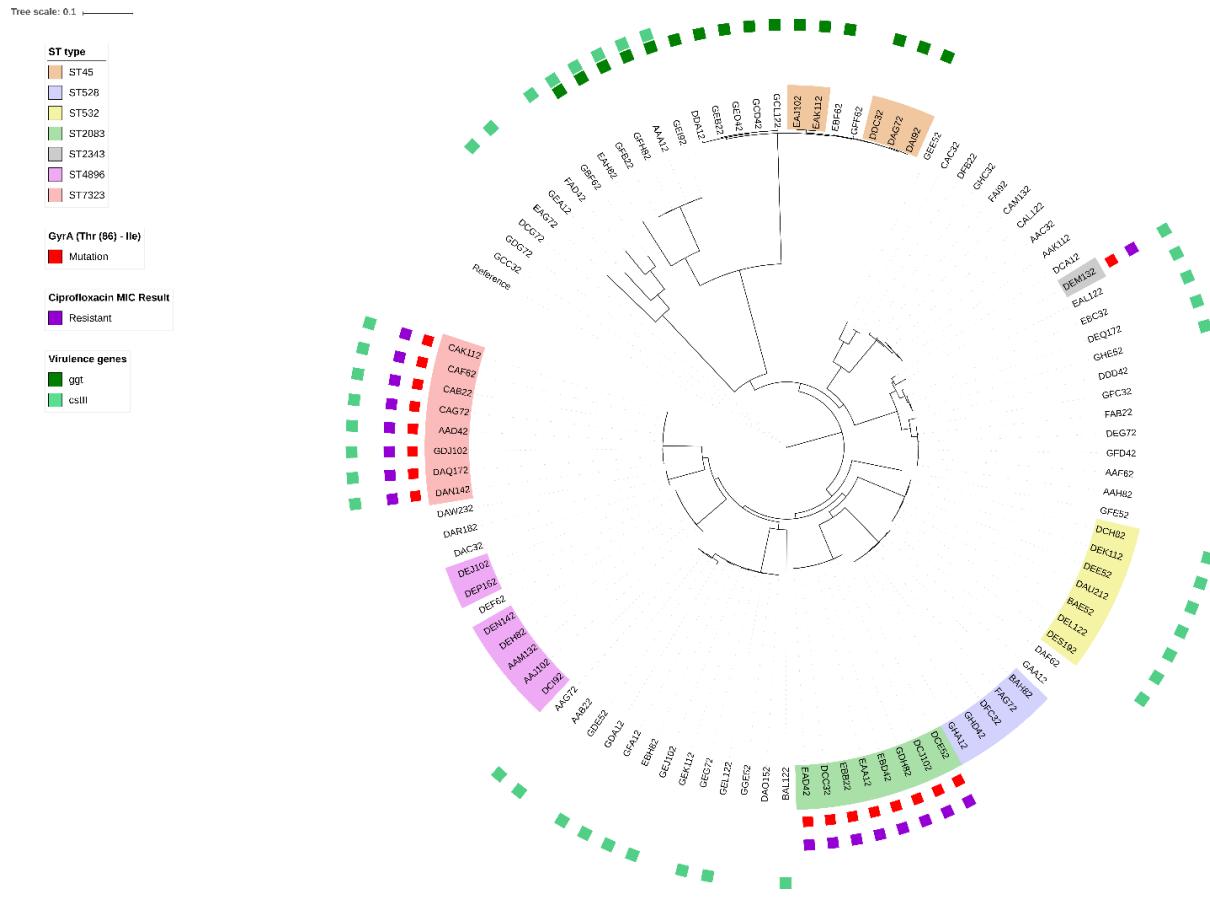

27 **Figure S1.** Principal component analysis ordination of total gene content for Australian *C. jejuni* and
 28 international collection where no distinct clustering is observed. Strain types resistant to ciprofloxacin
 29 are shown as mlst.cip.

30

31

32 **Figure S2.** Minimum spanning trees based on MLST loci of *C. jejuni* (A) and *C. coli* (B). Branch
33 numbers indicate number of loci variants, STs in bold red outlines are those with fluoroquinolone
34 resistance.

35

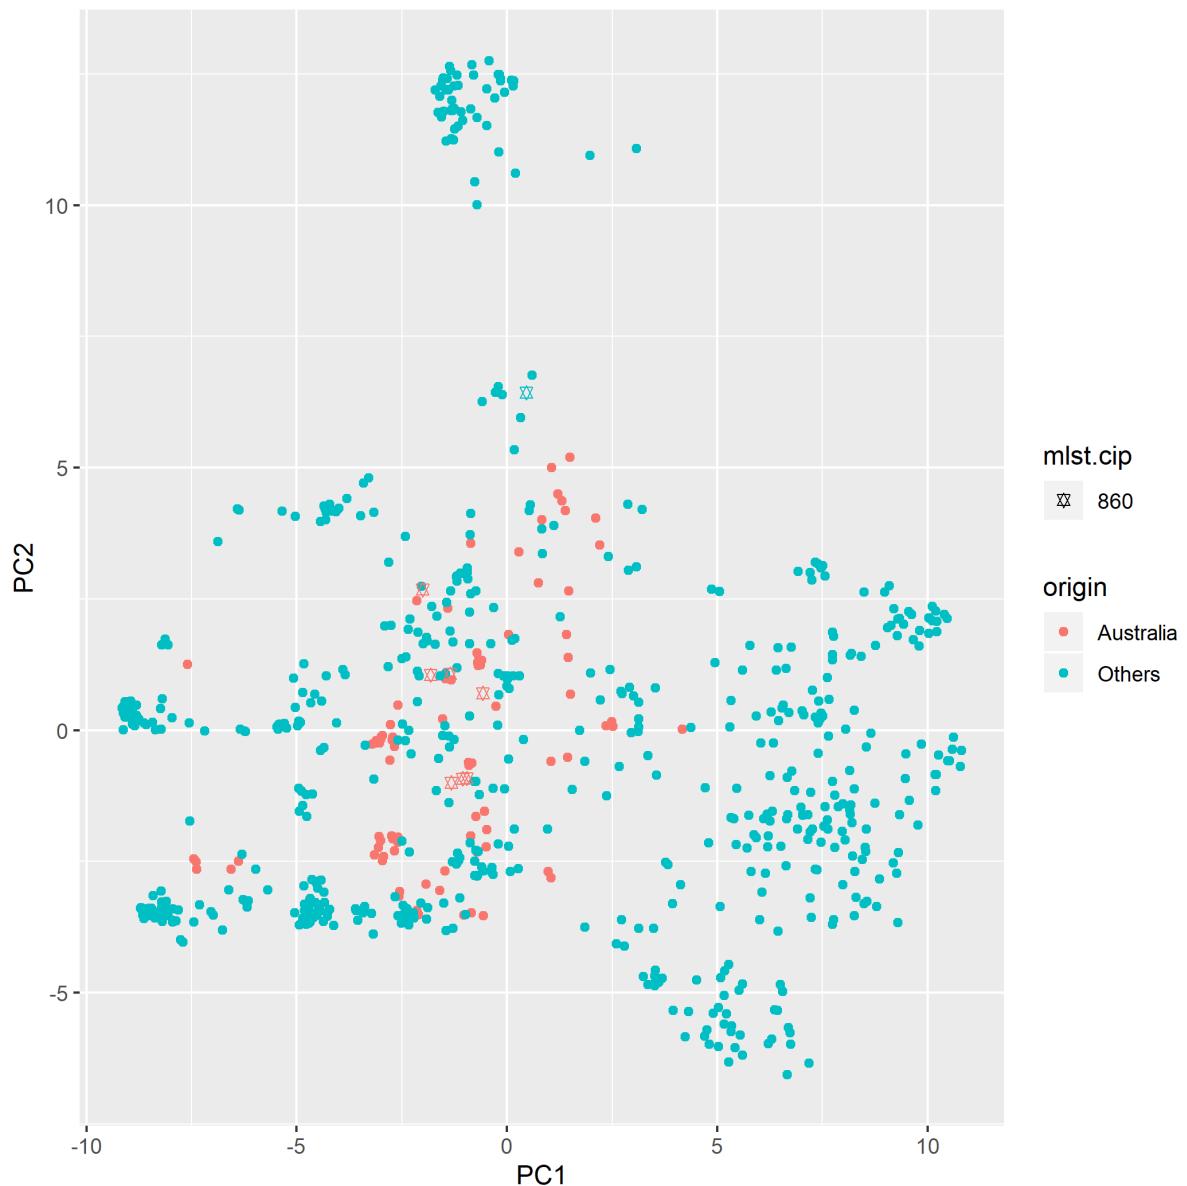

36

37 **Figure S3.** A maximum likelihood phylogeny based on the single nucleotide polymorphisms
 38 (SNPs) in the core genome of all *C. jejuni* isolated from Australian chickens. The
 39 phylogenetic tree also displays multilocus sequence types, antimicrobial resistance genes,
 40 phenotypic and genotypic (mutation of *gyrA*) resistance to ciprofloxacin of each isolates.

41

42

43

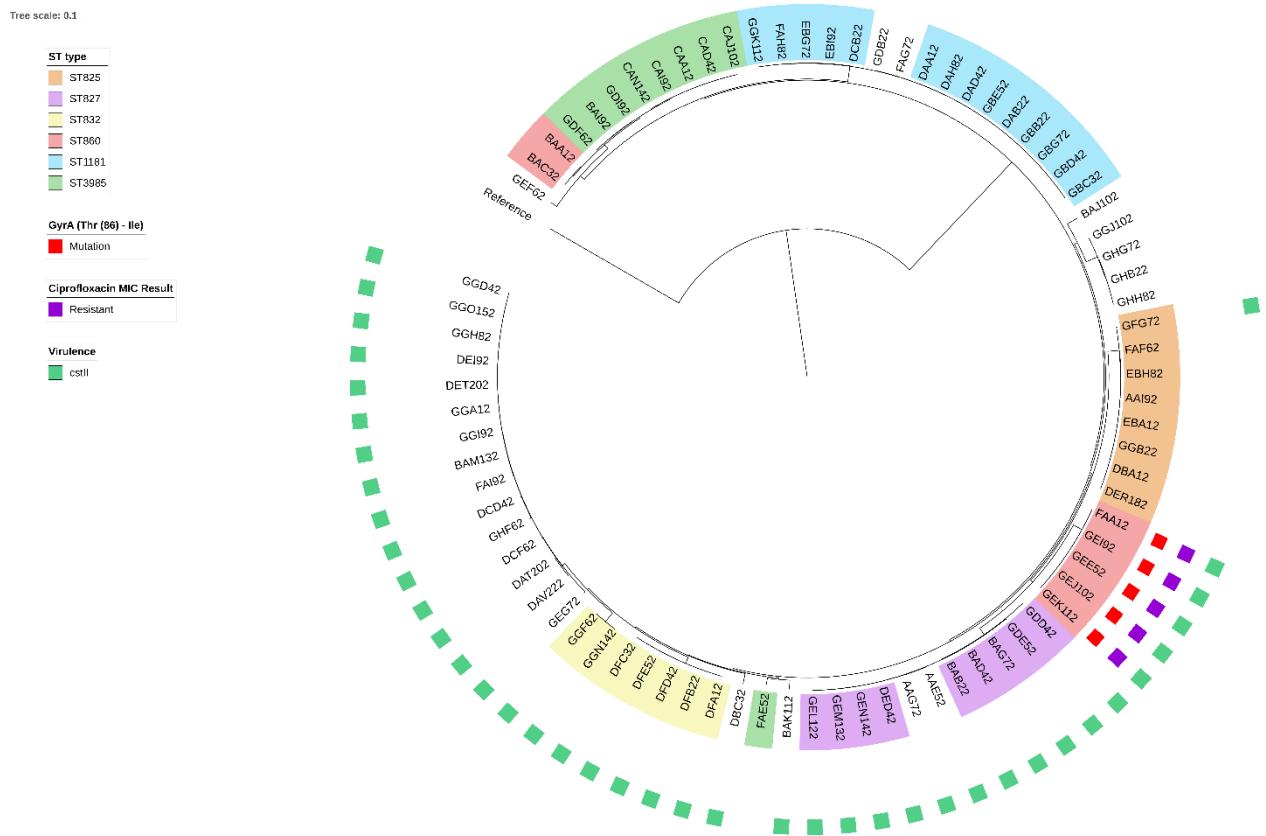

44

45 **Figure S4.** Principal component analysis ordination of total gene content for Australian *C.*
 46 *coli* and international collection where no distinct clustering is observed. Strain types
 47 resistant to ciprofloxacin are shown as mlst.cip.

48

49

50

51

52 **Figure S5.** A maximum likelihood phylogeny based on the single nucleotide polymorphisms
53 (SNPs) in the core genome of *C. coli* isolates belonging to Australian clade 3. The
54 phylogenetic tree also displays multilocus sequence types, antimicrobial resistance genes,
55 phenotypic and genotypic (mutation of *gyrA*) resistance to ciprofloxacin of each isolates.
