Supplemental Tables

Table S1. Overview of the metaproteomics results across samples

Samples	Total Spectrum	Peptide-Spectrum Matches	Peptide sequences	Proteins	Protein groups
<i>Jiuqu</i> & FG00 & FG03	499, 255	97, 198	15, 228	5, 311	2, 373

Table S2. Identified non-redundant protein groups across samples as an Excel file: Table_S2.xls in data sheet 1.

Table S3. Distribution of the identified non-redundant protein groups into Clusters of Orthologous Groups by the metaproteomics analysis.

Type	Functional categories	Number of proteins
Information storage and processing	[A] RNA processing and modification	1

Information storage and processing	[B] Chromatin structure and dynamics	4
Information storage and processing	[J] Translation, ribosomal structure and biogenesis	235
Information storage and processing	[K] Transcription	22
Information storage and processing	[L] Replication, recombination and repair	16
Cellular processes and signaling	[D] Cell cycle control, cell division, chromosome partitioning	9
Cellular processes and signaling	[M] Cell wall/membrane/envelope biogenesis	28
Cellular processes and signaling	[O] Posttranslational modification, protein turnover, chaperones	234
Cellular processes and signaling	[T] Signal transduction mechanisms	25
Cellular processes and signaling	[U] Intracellular trafficking, secretion, and vesicular transport	8
Cellular processes and signaling	[Z] Cytoskeleton	36
Metabolism	[C] Energy production and conversion	329
Metabolism	[E] Amino acid transport and metabolism	149
Metabolism	[F] Nucleotide transport and metabolism	42

Metabolism	[G] Carbohydrate transport and metabolism	338
Metabolism	[H] Coenzyme transport and metabolism	69
Metabolism	[I] Lipid transport and metabolism	69
Metabolism	[P] Inorganic ion transport and metabolism	54
Metabolism	[Q] Secondary metabolites biosynthesis, transport and catabolism	23
Poorly characterized	[R] General function prediction only	121
Poorly characterized	[S] Function unknown	7

Table S4. Distribution of carbohydrate hydrolases across samples as an Excel file: Table_S4.xls in data sheet 2.

Table S5. Bacterial and fungal microbiota diversity index based on 16S rRNA and ITS amplicons sequencing across samples

ID	Sample	Clean_reads	OTUs	Goods' coverage	Chao1 richness	Shannon diversity index
Bacteria	<i>Jiuqu_01</i>	31802	229	0.9944	319.91	3.50

<i>Jiuqu_02</i>	32917	241	0.9940	302.23	3.35
<i>Jiuqu_03</i>	36227	239	0.9941	313.87	3.84
FG00_01	28263	248	0.9938	306.50	4.09

<i>Others</i>	4.66±0.68	9.77±5.64	1.73±0.11	0.56±0.08	4.10±0.57	0.55±0.16

Table S7. The concentration of metabolites in the baijiu fermentation

Category	Compounds	Content (mg/g DW)				
		FG00	FG03	FG05	FG10	FG15
alcohols	ethanol	51.81±4.84	211.1±8.25	186.5±6.82	157.1±6.19	144.3±5.88

Table S8. The ethanol formation catalyzed by various mixtures of key carbohydrate hydrolases

Run	Content (mg/g starch)		Ethanol (mg/L)
	GH13	GH15	

1	0.10	0.38	415.4±7.83
2	0.06	0.44	478.5±7.98
3	0.12	0.22	405.5±8.10
4	0.06	0.22	388.7±6.99
5	0.06	0.22	389.4±8.55
6	0.02	0.08	218.0±8.71
7	0.06	0.22	387.4±8.82
8	0.10	0.08	321.8±8.10
9	0.06	0.22	374.3±9.81
10	0.00	0.22	373.4±8.36
11	0.06	0.02	343.0±7.37
12	0.02	0.38	397.0±8.82
13	0.06	0.22	380.5±7.79

Table S9. The ethanol formation catalyzed by a mixture of GH13 and GH15 (in a ratio of 1:6, w/w)

Time (h)	Content (mg/L)
24	158.7±4.99
48	305.3±7.90
72	435.8±6.80

Supplemental Figure Legends

Fig. S1 Profiles of Chinese Chixiang-style *Jiuqu* and baijiu production. In *Jiuqu* preparations, raw materials (rice, soybean) are stewed for 1 h under 0.1-0.2 MPa. Cooked materials are cooled to 30 °C, and mixed with caky balls (inoculated with strains). Mixed materials are shaped to bricks, and transferred into a making-house. The bricks are fermented for 7 days under 30-40 °C. Matured *Jiuqu* bricks are stored for two weeks, and smashed to powder for baijiu fermentation. In baijiu fermentation, raw materials (rice) are stewed for 30 min under 0.1-0.2 MPa, and cooled to 30 °C. Cooked rice are mixed with *Jiuqu* powder and other materials (water). Mixed materials are transferred into a 50 m³ silo, and fermented for 15 days under 30-35 °C. Then the mash is distilled to make liquors.

Fig. S2 Sample collections in Chinese Chixiang-style baijiu production. In *Jiuqu* samples collection, we tracked 3 *Jiuqu* making-houses produced in 7, 8 and 9 July, 2017. Each house was an independent batch. We selected three biological samples of *Jiuqu* powder, after storage and ready for baijiu fermentation. In baijiu fermentation, we tracked three silos that used corresponding *Jiuqu* samples. Fermented samples were collected from three points (1, 2 and 3) at the upper, middle and bottom layer (“a”, “b” and “c”) in every fermentation silo. We selected fermented samples at 0, 3, 5, 10 and 15 days.

Fig. S3 Phylogenetic tree of identified GH13, GH15 in baijiu fermentation and the commercial ones for Central Composite analysis.

Fig. S4 Dynamic of isolated strains, enzymatic activity, and physicochemical indexes by the culture-dependent method. Growth curve of *Rhizopus microsporus* (a), *Lactobacillus fermentum* and *Lactobacillus helveticus* (c). Dynamic of saccharifying activity (b) and pH (d).
