ACTIN served as loading control. Quantification of relative protein abundance of three individual experiments.

Data information: All quantitative data are represented as mean ± SD; *p < 0.05, **p < 0.01. Two tailed t-test. See also Appendix Table S3.

Appendix Figure S2: USP28 modulates Δ Np63 proteasomal degradation in FBXW7 deficient cells.

- Analysis of occurring genetic alterations of FBXW7 in lung-, cervical-, head and neck- and oesophageal squamous tumours (Cbioportal).
- Relative mRNA expression data of FBXW7 in human Lung (n=486), Cervix (n=306), Oesophagus (n=182) and HNSC (n=519) SCC tumours and normal non-transformed tissue (nLung=338 nCervix=13, nOesophagus=286 and nHNSC=44). Gepia software. In the box plot, the centre line reflects the median, the cross represents the mean and the upper and lower box limits indicates the first and third quartile. Whiskers extend 1.5x the IQR.
- Immunofluorescence staining against endogenous FBXW7 and Δ Np63 in the human SCC cell line A-431 (n=3). Scale bar = 5 μ m
- Mutational analysis of FBXW7 in A-431 (Cosmic sanger);
- Immunofluorescence staining against endogenous USP28 and Δ Np63 in A431.
- Identity and similarity of USP28 and USP25 in different organisms (European Bioinformatics Institute; EMBL-EBI).
- Treatment of A-431 cells with the pan-DUB inhibitor PR-619 for 24 hours at indicated time-points, followed by MG132 treatment for 6 hours at the highest PR-619 concentration, followed by Immunoblot against endogenous USP28 and Δ Np63. ACTIN served as loading control. Representative western blot (n=3).
- CHX chase for indicated timepoints, followed by Immunoblot against endogenous USP28 and Δ Np63, in A-431 cells stably transduced with constitutive shRNA-non-targeting control (NTC) or against USP28. ACTIN served as loading control. Quantification of protein stability of Δ Np63 in three individual experiments.
- TUBE ubiquitin pulldown against endogenously ubiquitylated Δ Np63 in constitutive shRNA-NTC or USP28 knock down A-431 cells, followed by immunoblot against Δ Np63. ACTIN served as loading control to calculate relative ubiquitination. (n=3).
