

Fig. S12. Immunohistochemical staining of the endothelial cell marker CD31 in xenograft tumors derived from WM239 control and P4HA1-knockdown cells. Representative images of the CD31 staining in control (ctrl shRNA) (A-D) and P4HA1-KD (P4HA1 shRNA) (E-H) tumors. Positive immunostaining is seen in red. Note that the vessel in (D) contains tumor cells. Scale bars = 200 μ m (A-C,E-G), 100 μ m (D,H).
