-----------------	------	------------	-------	-----	------------	-------	-----	------------	-------	-----	------------	-------

(1) Abbreviations: CI confidence interval.

(2) The unconstrained distributed lag model controls for seasonality and trend as well as day of week, public holidays, relative humidity and influenza.

(3) Cause-specific age subgroups that had less than 10 daily counts were not included in the analysis due to lack of power.

(4) Results from fracture-related attendances presented in separate table as model contained a heat threshold.

Table S2. Percentage change in risk by deprivation quintile and cause.

DEPRIVATION	CAUSE -SPECIFIC ED ATTENDANCES		
	%change	95% CI	p-Value
OVERALL ATTENDANCES			
Quintile 1	1.02	(0.93,1.10)	<0.001
Quintile 2	0.86	(0.76,0.95)	<0.001
Quintile 3	0.78	(0.69,0.87)	<0.001

Quintile 5	0.72	(0.12,1.32)	0.018
CEREBROVASCULAR ATTENDANCES			
Quintile 1	0.76	(-0.31,1.83)	0.162
Quintile 2	0.98	(0.26,1.70)	0.008
Quintile 3	0.59	(-0.2, -1.39)	0.147
Quintile 4	0.79	(-0.57,1.63)	0.06
Quintile 5	-0.19	(-1.18,0.81)	0.709
FRACTURE ATTENDANCES *			
Quintile 1	1.82	(0.97,2.66)	<0.001
Quintile 2	1.23	(0.59,1.88)	<0.001
Quintile 3	0.53	(-0.13,1.19)	0.115
Quintile 4	1.19	(0.47,1.93)	0.001
Quintile 5	0.76	(-0.09,1.60)	0.081
PSYCHIATRIC ATTENDANCES			
Quintile 1	0.92	(-0.10,1.94)	0.078
Quintile 2	0.72	(0.06,1.37)	0.033
Quintile 3	0.26	(-0.49,1.00)	0.494
Quintile 4	1.00	(0.06,1.94)	0.037
Quintile 5	0.85	(-0.49,2.19)	0.217

(1) Abbreviations: CI confidence interval .

(2) Quintile 1: most deprived; Quintile 5: least deprived .

(3) Percentage change in heat-related risk for attending A&E for every 1 °C change in mean temperature, adjusted for cold effects, seasonality and long-term trends, day of the week, relative humidity and weekly influenza counts.

(*) The regression model for fractures includes a heat threshold of 16 °C; therefore, the results shown are the percent change in risk for every 1 °C increase in mean temperature above 16 °C.
