Table S1. Number of single-copy genes with alleles in both a_1 and a_2 haploid genomes, with the 70% protein sequence identity detection threshold using reciprocal best BLASTp hits, before and after filtering out genes with transposable element (TE)-related functions. Filtering removed 192 paralogous genes in each haploid genome and genes with TE-related functions, including 1,750 and 1,819 from a_1 and a_2 haploid genome, respectively.

Number of single-copy genes	Mating-type chromosome	Autosomes
Before filtering out genes of TE-related functions	434	10,018
After filtering out genes of TE-related functions	371	9,025

Table S2. Identification of differentially-expressed (DE) genes with either a_1 -biased or a_2 -biased expression (i.e., higher expression in a_1 or a_2 , respectively) under various $\text{Log}_2(a_1/a_2)$ criteria.

DE criteria	a_1 bias	a_2 bias
$\text{Log}_2(a_1/a_2) > 0$	392	203
$\text{Log}_2(a_1/a_2) > 1$	286	139
$\text{Log}_2(a_1/a_2) > 2$	112	48
$\text{Log}_2(a_1/a_2) > 3$	65	29

Table S3. Numbers and percentages of genes with differential expression (DE) within genomic compartments, including autosomes, pseudo-autosomal regions (PARs), youngest and oldest evolutionary strata. Chi-squared test was used to assess whether DE genes were non-randomly distributed between autosomes and the genomic compartments on mating type chromosomes (MAT). *P* values <0.05 are in bold. NA: not applicable. The youngest strata only had one DE gene, so no statistical comparison could be performed for these strata.

	Higher expression in a₁				Higher expression in a₂			
	Autosomes	MAT			Autosomes	MAT		
		PARs	Youngest strata	Oldest Strata		PARs	Youngest strata	Oldest Strata
DE gene number	351	4	0	36	156	8	1	38
Total number	8207	114	29	198	8207	114	29	198
Percentage	4.28%	3.51%	0.00%	18.18%	1.90%	7.02%	3.45%	19.19%
X ² test (X ²)	NA	0.02	1.24	68.91	NA	11.60	0.04	210.95
X ² test (<i>P</i> value)	NA	0.88	0.41	9.99E-05	NA	6.60E-04	1	9.99E-05

Table S4. Wilcoxon rank sum test statistics for comparisons of mean non-synonymous substitution rate (dN , A) and synonymous substitution rate (dS , B) of differentially expressed genes (DE) versus non-differentially expressed genes (non-DE) within genomic compartments, i.e., autosomes, pseudo-autosomal regions (PARs), youngest and oldest evolutionary strata. P values <0.05 are in bold. NA: not applicable, as the youngest strata only had one DE gene, no statistical comparison could be performed for this compartment.

(A)

dN	Autosome	PARs	Young strata	Old Strata
Mean of DE genes	0	0	0.013	0.053
Mean of non-DE genes	0	0	0.006	0.033
Number of DE genes	117	4	1	43
Number of non-DE genes	5742	75	26	106
Wilcoxon W	334269	146	NA	1433
P -value	0.449	0.94	NA	< 0.001

(B)

dS	Autosome	PARs	Young strata	Old Strata
Mean of DE genes	0	0	0.013	0.027
Mean of non-DE genes	0	0	0.003	0.015
Number of DE genes	117	4	1	43
Number of non-DE genes	5742	75	26	106
Wilcoxon W	333918	116	NA	1422
P -value	0.404	0.455	NA	< 0.001

Table S5. Wilcoxon rank sum test statistics for comparisons of divergence between each of the two *Microbotryum lychnidis-dioicae* alleles and their *M. lagerheimii* orthologs. This test assessed whether the allele with lower expression in *M. lychnidis-dioicae* was more divergent from orthologs in *M. lagerheimii* than the alleles with higher expression in *M. lychnidis-dioicae*, considering non-synonymous substitution rate (dN), synonymous substitution rate (dS), and the ratio (dN/dS) within genomic compartments, including autosomes pseudo-autosomal regions (PARs), youngest and oldest evolutionary strata. We calculated these substitution rates for a_1 and a_2 alleles between these two species separately. NA: not applicable, as the youngest strata only had one DE gene, statistical comparisons could not be performed for this compartment.

Substitution type	Autosome		PARs		Young strata		Old Strata	
	High vs low mutation rates		High vs low mutation rates		High vs low mutation rates		High vs low mutation rates	
	W	<i>P</i> -value	W	<i>P</i> -value	W	<i>P</i> -value	W	<i>P</i> -value
dN	8066.0	0.999	18.5	1.000	NA	NA	1262.5	0.934
dS	8060.5	0.995	19.0	0.936	NA	NA	1167.0	0.909
dN/dS	8057.0	0.991	17.0	0.936	NA	NA	1247.5	0.989

Table S6. Wilcoxon rank sum test statistics for comparisons of unoriented transposable element (TE) insertion differences between alleles (within 20kb up and downstream) of differentially expressed (DE) genes versus non-differentially expressed (non-DE) genes within genomic compartments, i.e., autosomes, pseudo-autosomal regions (PARs), youngest and oldest evolutionary strata. P-values <0.05 are in bold. NA: not applicable, as the youngest strata only had one DE gene, statistical comparisons could not be performed for this compartment.

Transposable elements (TEs)	Autosome	PARs	Young strata	Old Strata
Difference of DE genes	0.312	0.333	1.000	4.567
Differences of non-DE genes	0.107	0.078	2.143	3.903
Number of DE genes	507	12	1	74
Number of non-DE genes	7700	102	28	124
Wilcoxon W	31387793	546	NA	4062
<i>P</i> -value	<0.001	0.192	NA	0.173

Table S7. Two-proportion Z test for comparisons of unoriented protein length differences between alleles of differentially expressed (DE) genes versus non-differentially expressed (non-DE) genes within genomic compartments, i.e., autosomes, pseudo-autosomal regions (PARs), youngest and oldest evolutionary strata. *P* values <0.05 are in bold. NA: not applicable, as proportions * sample size was less than five for the PARs and youngest strata, statistical comparisons could not be performed for these compartments.

Protein Length	Autosomes	PARs	Young strata	Old Strata
Proportion unequal length DE genes	0.037	0.000	0.000	0.757
Proportion unequal length non-DE genes	0.012	0.020	0.357	0.605
Number of DE genes	507	12	1	74.000
Number of non-DE genes	7700	102	28	124
<i>Z</i>	4.640	NA	NA	2.186
<i>P</i> -value	0.0002	NA	NA	0.029

Table S8. Wilcoxon rank sum test statistics for comparisons of unoriented differences in intron content between alleles of differentially expressed (DE) versus non-differentially expressed (non-DE) genes within genomic compartments, i.e., autosomes, pseudo-autosomal regions (PARs), youngest and oldest evolutionary strata. *P* values <0.05 are in bold. NA: not applicable, as the youngest strata only had one DE gene, no statistical comparison could be performed for this compartment.

Intron	Autosomes	PARs	Young strata	Old Strata
Difference between DE alleles	0.007	0.001	0.005	0.169
Difference between non-DE alleles	0.002	0.006	0.02	0.101
Number of DE genes	507	12	1	74
Number of non-DE genes	7700	102	28	124
Wilcoxon W	1920124	605	NA	3205
<i>P</i> -value	0.033	0.888	NA	0.001

Table S9. Wilcoxon rank-sum test statistics for comparisons of unoriented differences in overall GC content (GC0), and third codon position (GC3) between alleles of differentially expressed (DE) versus non-differentially expressed (non-DE) genes within genomic compartments, i.e., autosomes, pseudo-autosomal regions (PARs), youngest and oldest evolutionary strata. (A) Overall GC content. (B) Third codon position GC content. *P* values <0.05 are in bold. NA: not applicable, as the youngest strata only had one DE gene, no statistical comparison could be performed for this compartment.

(A)

GC0	Autosomes	PAR	Young strata	Old Strata
Difference between DE alleles	0.000124	0.00065	0.001373	0.01027
Difference between non-DE alleles	0.000081	0.000054	0.00171	0.0067
Number of DE genes	507	12	1	74
Number of non-DE genes	7700	102	28	124

82 **haploid a₁ cell culture (A) and haploid a₂ cell culture (B).**

83

84 **Fig. S3. Multidimensional scaling (MDS) plot of RNAseq libraries of *Microbotryum***
85 ***lychnidis-dioicae*.**

86 Water denotes water agar (i.e. low nutrients) culture condition.

87

88 **Fig. S4. Boxplot of overall gene expression in terms of Log₂TPM (transcripts per**
89 **millions) for genes with a₁-biased expression (in red), a₂-biased expression (in blue) and**
90 **non-biased expression (in grey) on mating-type chromosomes (MAT), as well as**
91 **autosomes (Chr01-Chr18 and other contigs).**

92 Within each color, the slightly brighter color indicates a₁ alleles, the other being a₂ alleles. For
93 boxplot, the horizontal bars (from bottom to top) represent the 25% quartile, median and 75%
94 quartile respectively.

95

96 **Fig. S5. The ratio index of coding sequence and protein sequence of *Microbotryum***
97 ***lychnidis-dioicae*.**

98 The ratio of predicted coding sequence length divided by the predicted protein sequence
99 length multiplied by three for a₁-bias expression (in blue), a₂-biased expression (in red) and

100 non-biased expression (in grey), among the four genomic compartments. Within each color,
101 the slightly brighter color indicates a_1 alleles, the other being a_2 alleles. In the boxplot, the
102 horizontal bars (from bottom to top) represent the 25% quartile, median and 75% quartile,
103 respectively.

104

105 **Fig. S6. Boxplot of synonymous substitution rate (dS) for differentially expressed (DE)**
106 **and non-differentially expressed (Non-DE) genes of *Microbotryum lychnidis-dioicae*.**

107 Wilcoxon rank sum tests for comparisons of mean non-synonymous substitution rate (dN) of
108 differentially expressed genes (DE) versus non-differentially expressed genes (non-DE)
109 within genomic compartments: ‘***’: $P < 0.001$, other comparisons were not significant.
110 Genomic compartments correspond to autosomes, pseudo-autosomal regions (PARs),
111 youngest and oldest evolutionary strata. For boxplot, the horizontal bars (from bottom to top)
112 represent the 25% quartile, median and 75% quartile respectively.

113

114 **Fig. S7. Boxplot of differentially (a_1 -biased in red, a_2 -biased in blue) and non-**
115 **differentially expressed genes (not-biased in grey) and the sequence divergence between**
116 **alleles of *Microbotryum lychnidis-dioicae*.**

117 Wilcoxon rank sum tests for comparisons of genes with higher allelic expression in the a_1 and
118 a_2 haploid mating type genomes separately to non-differentially expressed genes for the mean
119 non-synonymous substitution rate (dN) (A), synonymous substitution rate (dS) (B); ‘***’: $P <$
120 0.001 , ‘**’: $P < 0.01$, ‘*’: $P < 0.5$, ‘.’: $P < 0.1$, NS: not significant. As dN and dS of almost all
121 genes in autosomes and PARs are zero, and there is only one DE gene on the youngest strata,
122 so no statistical test can be performed in these regions. Sample size for each genomic
123 compartment is listed either above or inside the boxplot. Genomic compartments correspond
124 to autosomes, pseudo-autosomal regions (PARs), youngest and oldest evolutionary strata. For
125 boxplot, the horizontal bars (from bottom to top) represent the 25% quartile, median and 75%
126 quartile respectively.

127

128 **Fig. S8. Boxplot of differentially expressed (DE) and non-differentially expressed genes**
129 **(non-DE) and gene evolutionary rate dN/dS of *Microbotryum lychnidis-dioicae*.**

130 Wilcoxon rank sum tests for comparisons of evolutionary rate dN/dS of differentially
131 expressed genes (DE) versus non-differentially expressed genes (non-DE) within genomic
132 compartments; NS: not significant. As dN/dS of almost all genes in autosomes and PARs are

133 zero, and there is only one DE gene on the youngest strata, no statistical test can be performed
134 in these regions. Genomic compartments correspond to autosomes, pseudo-autosomal regions
135 (PARs), youngest and oldest evolutionary strata. For boxplot, the horizontal bars (from
136 bottom to top) represent the 25% quartile, median and 75% quartile respectively.

137

138 **Fig. S9. Boxplot of sequence divergence, non-synonymous substitution rate dN (A),**
139 **synonymous substitution rate dS (B), between *Microbotryum lychnidis-dioicae* and *M.***
140 ***lagerheimii*.**

141 Alleles of differentially-expressed genes with higher (red - lower expressed allele) and lower
142 (blue - higher expressed allele) substitution rates and equal (grey; non-differentially expressed
143 genes) mutation rates were pooled from a_1 and a_2 genomes and assessed for divergences from
144 orthologs in *M. lagerheimii*. Genomic compartments correspond to autosomes, pseudo-
145 autosomal regions (PARs), youngest and oldest evolutionary strata. For boxplot, the
146 horizontal bars (from bottom to top) represent the 25% quartile, median and 75% quartile
147 respectively.

148

149 **Fig. S10. Dot plot of oriented differences of transposable element (TE) insertions and**
150 **differential gene expression between alleles of *Microbotryum lychnidis-dioicae*.**

151 TE insertions are shown for sliding-window intervals from upstream to downstream of genes,
152 where differences between alleles were calculated as the TE number for the allele with lower
153 expression minus the TE number for the higher expressed allele; a positive value thus
154 represented an excess of TEs in the lower expressed allele. Sliding window intervals are
155 shown as **A**: upstream 20kb to 10kb, **B**: upstream 15kb to 5kb, **C**: upstream 10kb to gene, **D**:
156 upstream 5kb to downstream 5kb, **E**: gene to downstream 10kb, **F**: downstream 5kb to 15kb,
157 and **G**: downstream 10kb to 20kb.

158

159 **Fig. S11. Comparisons of differentially expressed (DE) and non-differentially expressed**
160 **(non-DE) genes between mating types of *Microbotryum lychnidis-dioicae* for differences**
161 **between alleles in third codon position GC content (GC3) within genomic compartments.**

162 Wilcoxon rank sum test statistics for comparisons of unoriented differences in GC content of
163 third codon position (GC3) between alleles of differentially expressed (DE) versus non-
164 differentially expressed (non-DE) genes within genomic compartments; ***: $P < 0.001$, NS:
165 non significant. Genomic compartments correspond to autosomes, pseudo-autosomal regions
166 (PARs), youngest and oldest evolutionary strata. The notation “ a ” indicates that the youngest

167 evolutionary strata contained only one DE gene, precluding comparisons to non-DE genes
168 within this compartment.
169
