

Supplementary Figure 4

Supplementary Figure 4 : Unique and shared features of CRISPR systems relevant to gRNA activity. (Top) Venn diagram depicting the cluster of features that are shared among CRISPR systems (CRISPRi: $n = 83$, CRISPRa: $n = 82$, Cas9: $n = 84$, Cas12a: $n = 215$, where n represents the number of features selected in each system using ENLOR algorithms). **(Bottom)** Depiction of the features that are fully shared among all systems (x -axis), together with their weights (y -axis) generated using the ENLOR method.
