Fig 1a

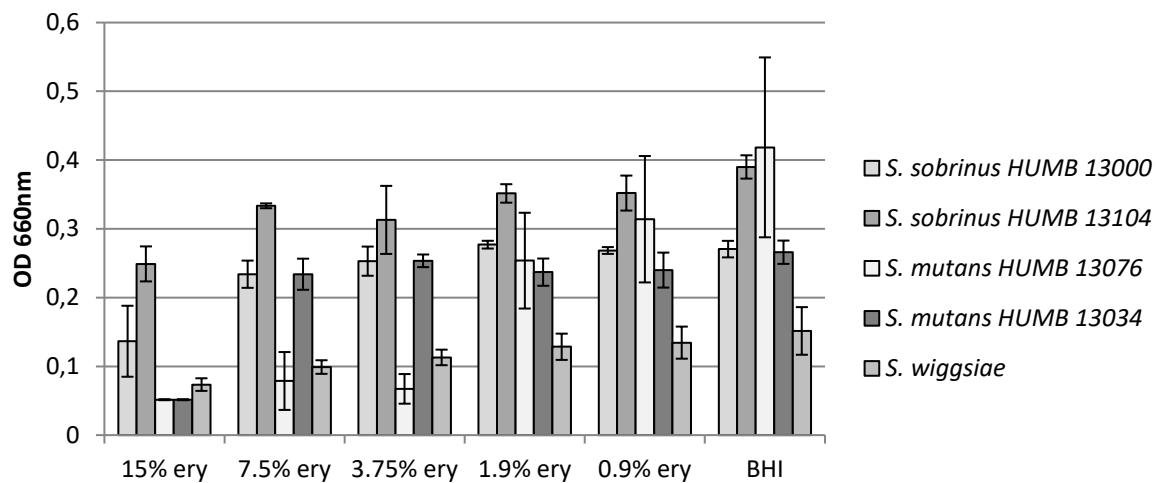

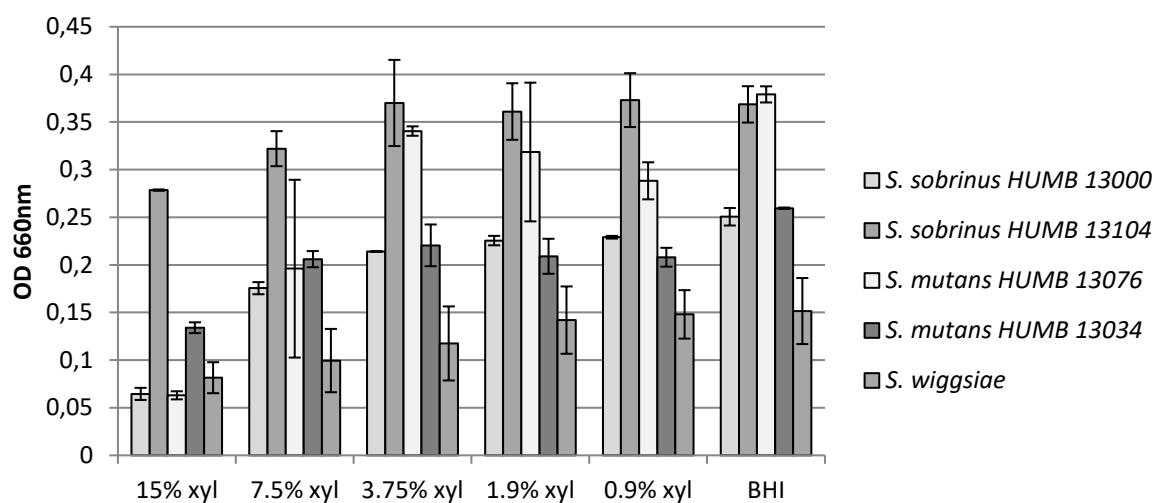

Fig 1b

Supplementary Figure 1. Inhibitory effect of erythritol (a) and xylitol (b) to the growth of studied two *S. sobrinus*, (*S. sobrinus* HUMB 13000, *S. sobrinus* HUMB 13104) two *S. mutans* (*S. mutans* HUMB 13076, *S. mutans* HUMB 13034) and *S. wiggiae* DSM 22547 strain after 24 h incubation. The growth was measured spectrophotometrically by determining the optical density at 660 nm. Average of two median results from triplicate experiments and standard deviations are presented.

Fig 2a

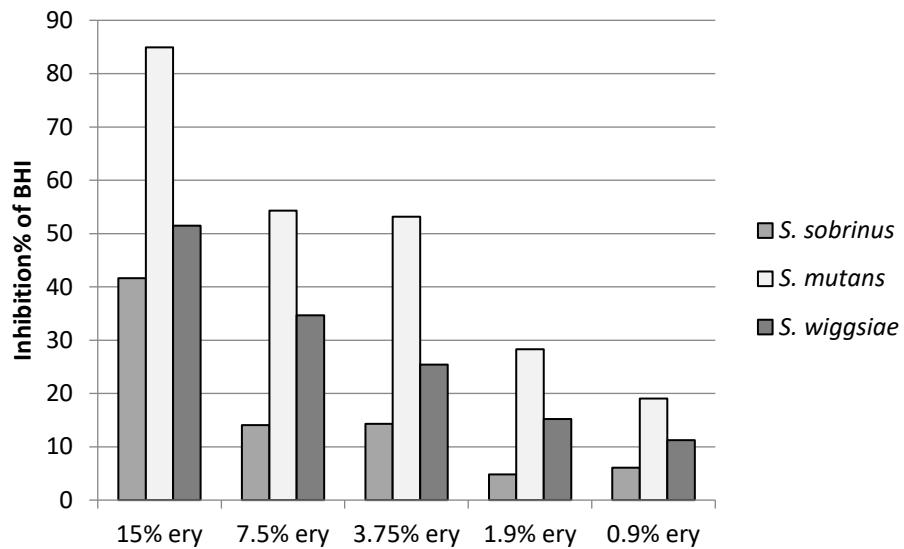

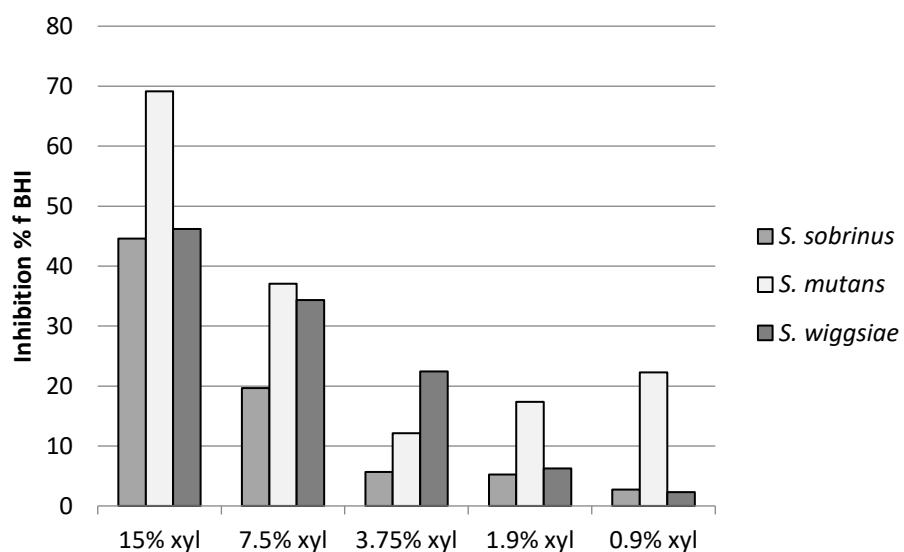

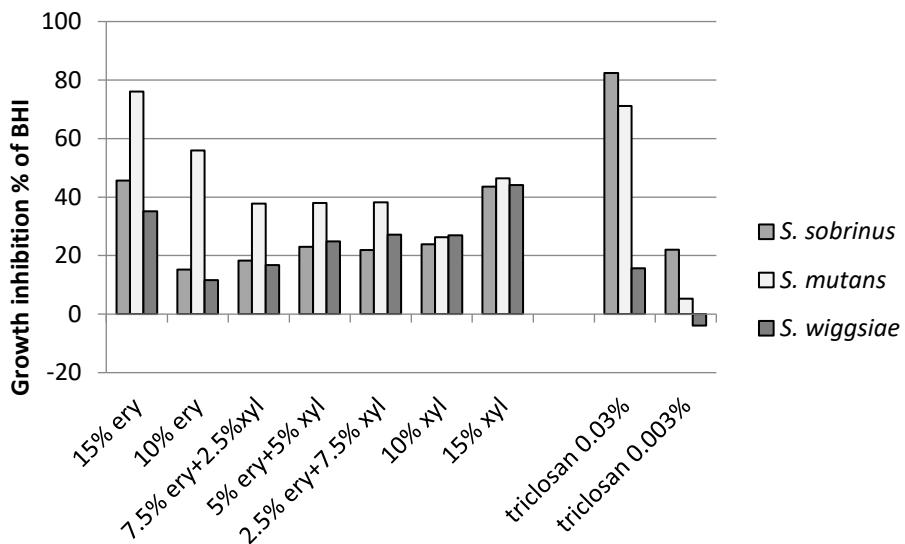

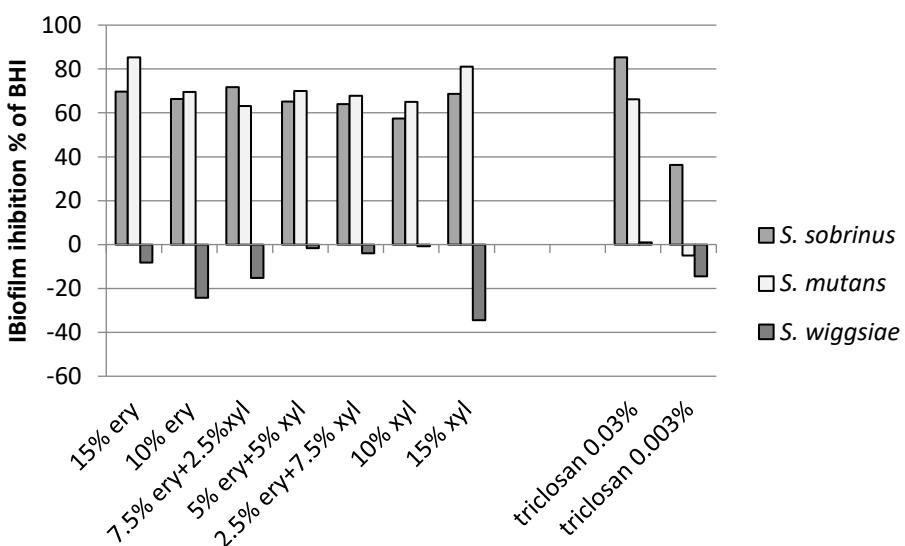

Fig 2b

Supplementary Figure 2. Inhibitory effect (%) erythritol (a) and xylitol (b) to the growth of studied two *S. sobrinus*, (*S. sobrinus* HUMB 13000, *S. sobrinus* HUMB 13104) two *S. mutans* (*S. mutans* HUMB 13076, *S. mutans* HUMB 13034) and *S. wiggiae* DSM 22547 strain after 24 h incubation. The growth was measured spectrophotometrically by determining the optical density at 660 nm. Average of two median results from triplicate experiments was calculated and inhibition compared to the growth in BHI is presented

Supplementary Figure 3. Average growth inhibition of polyol combinations and triclosan (% of BHI) 5 *S. sobrinus* (HUMB 13000, HUMB 13087, HUMB 13104, HUMB 13038, HUMB 13105), 5 *S. mutans* (HUMB 13005, HUMB 13076, HUMB 13034, HUMB 13033, HUMB 13102) and *S. wiggiae* DSM:22547 strains after 24 h. The growth was measured spectrophotometrically by determining the optical density at 660 nm. Average of two median results from triplicate are presented as percentage of BHI

Supplementary Figure 4. Average biofilm inhibition of polyol combinations and triclosan (% of BHI) 5 *S. sobrinus* (HUMB 13000, HUMB 13087, HUMB 13104, HUMB 13038, HUMB 13105), 5 *S. mutans* (HUMB 13005, HUMB 13076, HUMB 13034, HUMB 13033, HUMB 13102) and *S. wiggiae* DSM:22547 strains after 24 h. The biofilm was measured spectrophotometrically by determining the optical density at 550 nm. Average of two median results from triplicate are presented as percentage of BHI
