

Supplemental Figure 5, Verdegaal et al.

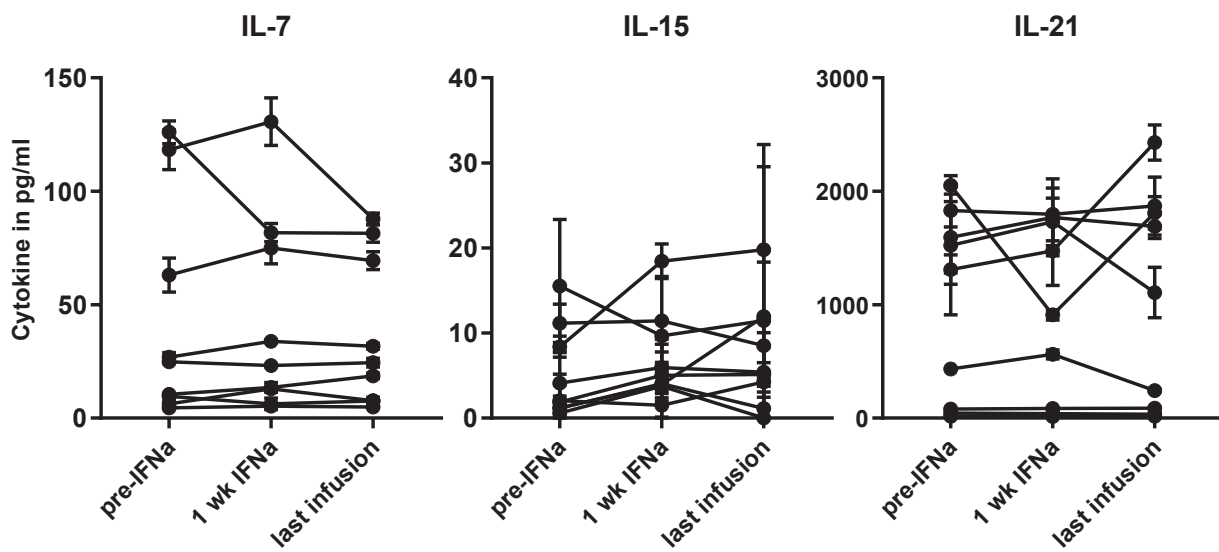

Figure S5: Effect of IFNa on serum homeostatic cytokine levels. The effect of IFNa conditioning on serum/plasma concentrations of IL-7, IL-15 and IL-21 was analyzed in samples obtained just prior to the start of IFNa treatment (pre-IFNa), just before the first TIL infusion (wk 1 IFNa) and after completion of three TIL infusions (last infusion) i.e. at week 7 (N=9). The circulating cytokine levels were measured by cytokine-specific ELISA assays (see methods section).
