

Supplemental Figure 6. (A) MEER tumor cells were grown subcutaneously in WT and CD244^{-/-} mice. Tumors were harvested on Day 32, TILs incubated for 5 hours at 37°C with or without CD3 stimulation, and analyzed by flow cytometry. Cells were gated as described in Supplemental Figure 3. PD-1 expression increased in CD8⁺ TILs compared to splenic CD8⁺ T cells. Spontaneous pro-inflammatory cytokine production (TNF α and IFN γ) was increased in CD244^{-/-} CD8⁺ TILs compared to WT.
