

Supplementary information: Bat coronavirus phylogeography in the Western Indian Ocean

Léa Joffrin, Steven M. Goodman, David A. Wilkinson, Beza Ramasindrazana, Erwan Lagadec, Yann Gomard, Gildas Le Minter, Andréa Dos Santos, M. Corrie Schoeman, Rajendraprasad Sookhareea, Pablo Tortosa, Simon Julienne, Eduardo S. Gudo, Patrick Mavingui and Camille Lebarbenchon

Research permits for the collection of biological materials

Reunion Island

Samples were collected as part of a previous study on lyssavirus infection in bats in the Indian Ocean (1), under a research permit delivered by the Préfecture de La Réunion: “Arrêté préfectoral du 11 Février 2013 and Arrêté préfectoral du 11 Septembre 2014 (N°2014-07)”.

Mauritius

Samples were collected as part of a previous study on lyssavirus infection in bats in the Indian Ocean (1), under a memorandum of agreement for the supply of biological material by Government of Mauritius (delivered by the National Park and Conservation Service for authorization of Mauritius), signed 17 December 2010 and 09 January 2013. CITES permit from the Mauritian national authority was issued for tissue export (permit MU120933) to Reunion Island.

Mayotte

Samples were collected as part of a previous study on lyssavirus infection in bats in the Indian Ocean (1), under a research permit delivered by the “Préfecture de Mayotte: Arrêté N°158/DEAL/SEPR/2014”.

Madagascar

Samples were collected as part of previous studies on infectious agents in Malagasy wildlife (1–4), under the following research permits delivered by the “Direction du Système des Aires Protégées and Direction Générale de l’Environnement et des Forêts”; Madagascar National Parks: 350/10/MEF/SG/DGF/DCB.SAP/SCB, 032/12/MEF/SG/DGF/ DCB.SAP/SCBSE, 067/12/MEF/SG/DGF/DCB.SAP/SCBSE, 194/12/ MEF/SG/DGF/DCB.SAP/SCB, N°283/11/MEF/SG/DGF/DCB.SAP/SCB, N°077/12/MEF/SG/DGF/DCB.SAP/SCBSE, 238/14/MEEF/SG/ DGF/DCB.SAP/SCB and 268/14/MEEF/SG/DGF/DCB.SAP/SCB. A CITES permit from the Malagasy national authority was issued for tissue export (permit 243C-EA06/MG12) to Reunion island.

Seychelles (Mahe)

Samples were collected as part of a previous study on lyssavirus infection in bats in the Indian Ocean (1), under the following research permit delivered by the Direction of Wildlife, Trade and Conservation Section and the Ministry of Environment and Energy of Republic of Seychelles: Export permits Agreement of 5 March 2014. CITES permit from the Republic of Seychelles was issued for export (permit N°1772) to Reunion Island.

Mozambique (Inhassoro district, Inhambane province)

Samples were collected as part of a previous study on astrovirus infection in bats in the Indian Ocean (5), under a research permit delivered by the Ministry of Health (N°S/N/SDI/0233/15).

Type of collected samples

Organs were collected before 2014, stored in liquid nitrogen in the field and then at -80°C upon arrival at the laboratory (Appendix Table 1). From 2014 onward, feces, rectal, and oral swabs were collected (Appendix Table 1) and placed in 1mL brain heart infusion medium (Conda, Madrid, Spain) supplemented with penicillin G (1,000 units/mL), streptomycin (1 mg/mL), kanamycin (0.5 mg/mL), gentamicin (0.25 mg/mL) and amphotericin B (0.025 mg/mL). These samples were also stored in liquid nitrogen in the field and at -80°C upon arrival at the laboratory (Appendix Table 1).
