## **Supplementary Information**

Supplementary Fig. S1. Comparison of gene expression levels under different spike developmental stages in two cultivars.

Supplementary Fig. S2. Gene ontology (GO) enrichment analysis of differentially expressed genes (DEGs) during *L. angustifolia* flower development.

Supplementary Fig. S3. Differential expression of the unigenes related to the essential oil (EO) biosynthesis pathway in Xinxun 2.

Supplementary Fig. S4. A neighbour-joining tree based on amino acid sequences of LaHMGR and selected plant HMGR sequences.

Supplementary Fig. S5. Amino acid sequences alignment of LaPPS and selected plant PPS sequences.

Supplementary Fig. S6. Differential expression of the unigenes encoding putative transcription factors.

Supplementary Fig. S7. Field grown *Lavandula angustifolia*.

Supplementary Table S1. Overview of sequence data quality obtained from Illumina sequencing.

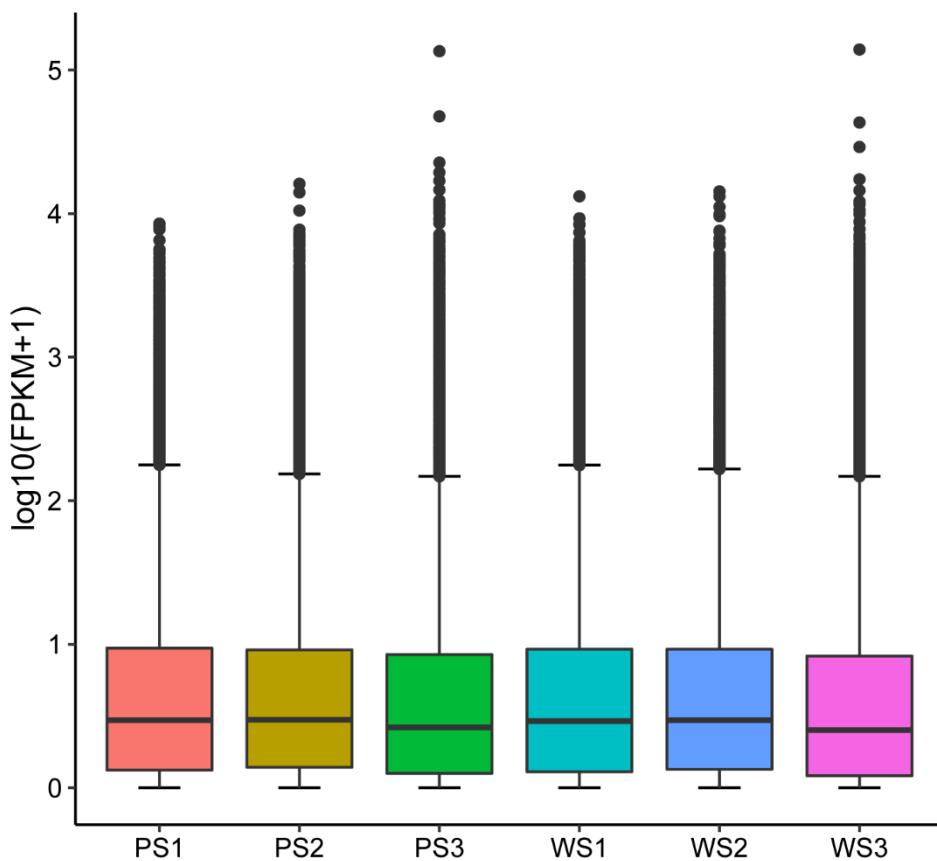

Supplementary Table S2. The transcriptome quality of the *L. angustifolia* assembly were aligned to conserved genes using BUSCO method.

Supplementary Table S3. KEGG pathway analysis of DEGs among different comparisons during the different developmental stages of spike in two *L. angustifolia* cultivars

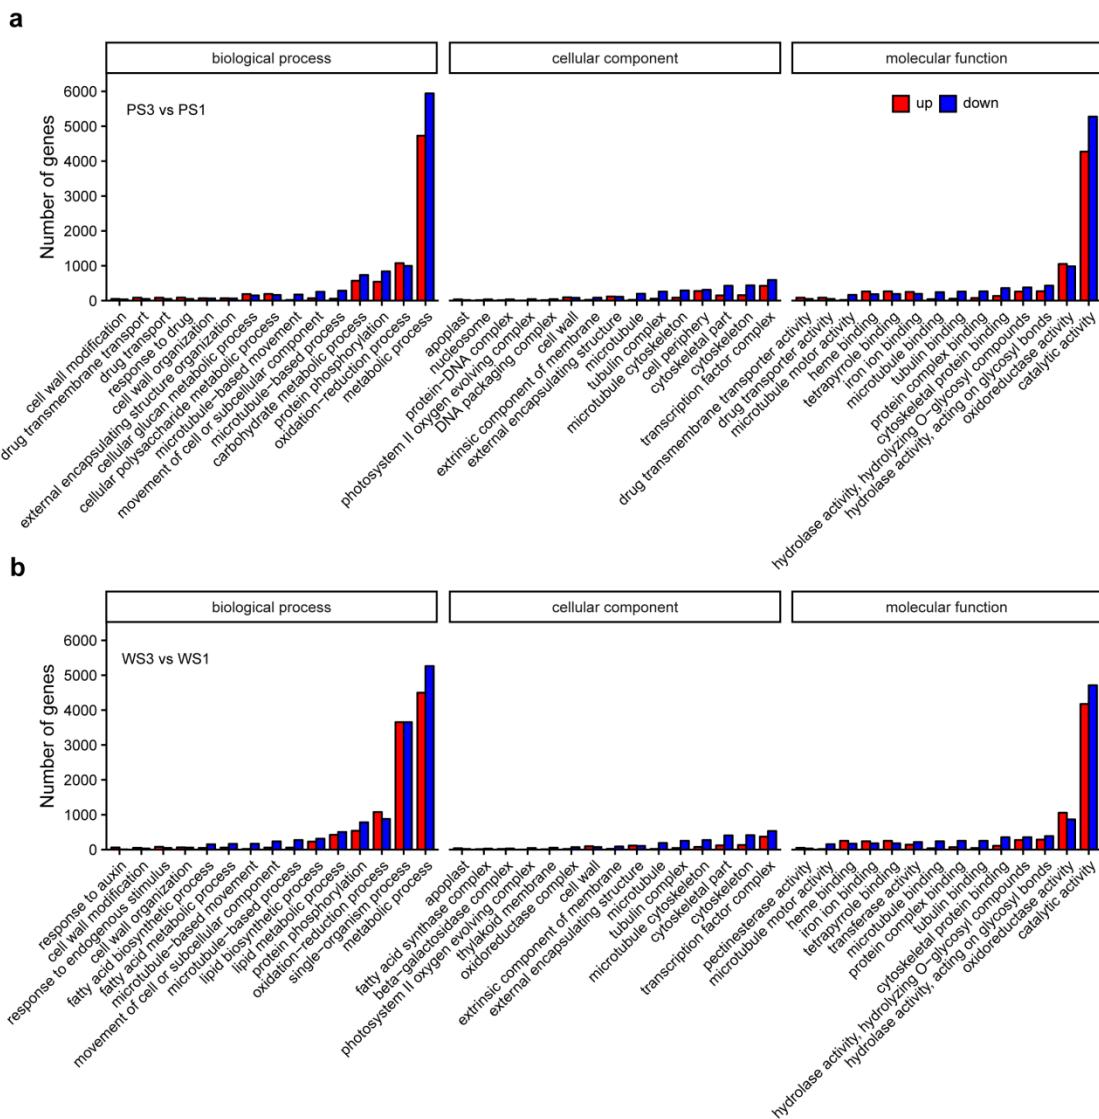

Supplementary Table S4. Information for differentially expressed genes related to terpene biosynthesis in *L. angustifolia*.

Supplementary Table S5. Information for differentially expressed transcription factors during the developmental stages of spikes in *L. angustifolia*.

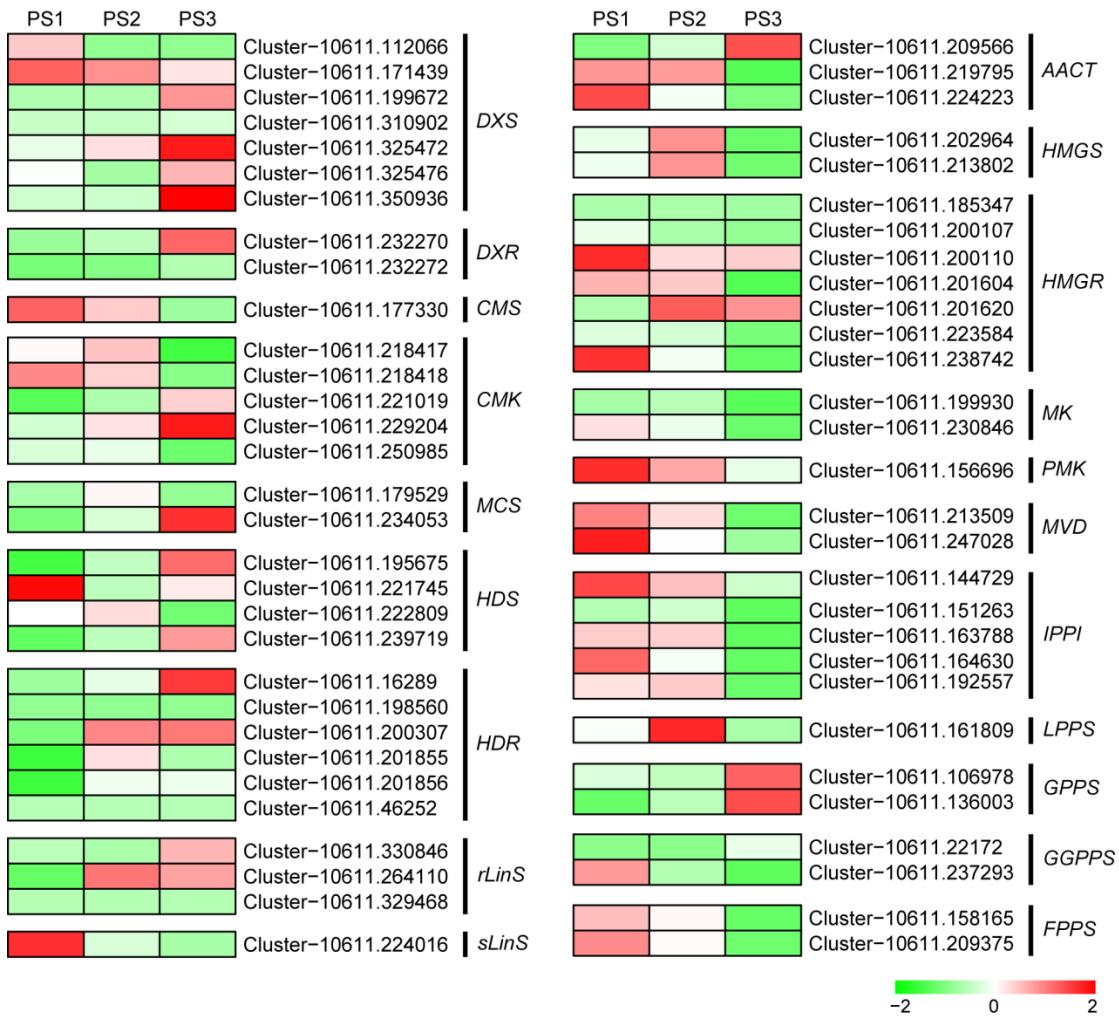

Supplementary Table S6. Primers used in qRT-PCR validation in this study.

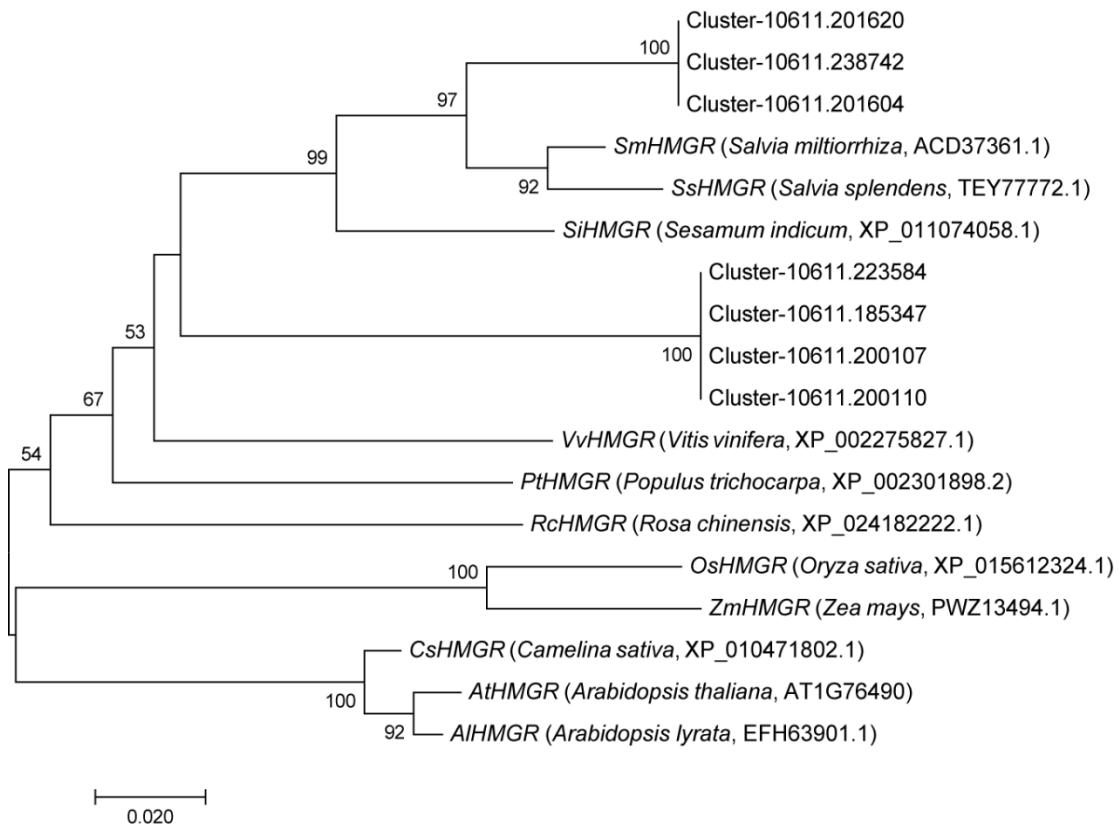

**Supplementary Fig. S1. Comparison of gene expression levels at different spike developmental stages in two cultivars.** Boxplot showing the distribution of FPKM values at three stages in two cultivars. The x-axis in the boxplot is the sample name. The y-axis is the  $\log_{10}(FPKM+1)$ . PS1, PS2 and PS3 indicate the purple lavender flowers at Bud I, Bud II, and flowering stage 50%, respectively. WS1, WS2 and WS3 indicate the white lavender flowers at Bud I, Bud II, and flowering stage 50%, respectively.

**Supplementary Fig. S2. Gene ontology (GO) enrichment analysis of differentially expressed genes (DEGs) during *L. angustifolia* flower development.** **a** Comparison between PS1 and PS3. PS1 and PS3 indicate purple flower development in Xinxun 2 at Bud I and flowering stage 50%, respectively. **b** Comparison between WS1 and WS3. WS1 and WS3 indicate white flower developments of YXA-5 at Bud I and flowering stage 50%, respectively. The x-axis shows the GO classification of the *L. angustifolia* transcriptome. The y-axis shows the number of genes in a specific category.

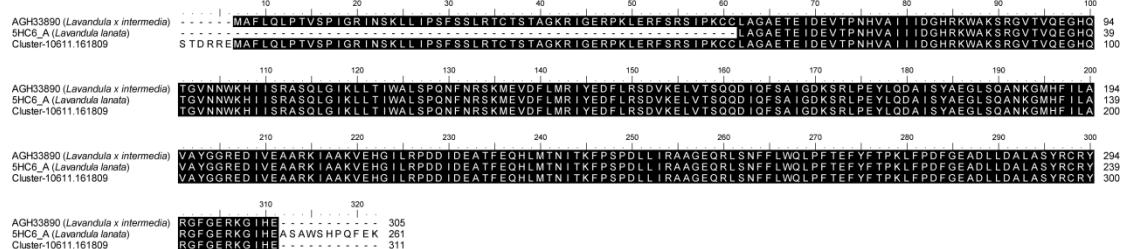

**Supplementary Fig. S3. Differential expression of the unigenes related to the essential oil (EO) biosynthesis pathway in Xinxun 2.** Heatmap depicting the expression profile of EO biosynthesis-related genes involved in the different reaction steps. The details of the transcripts are given in Supplementary Table S4.

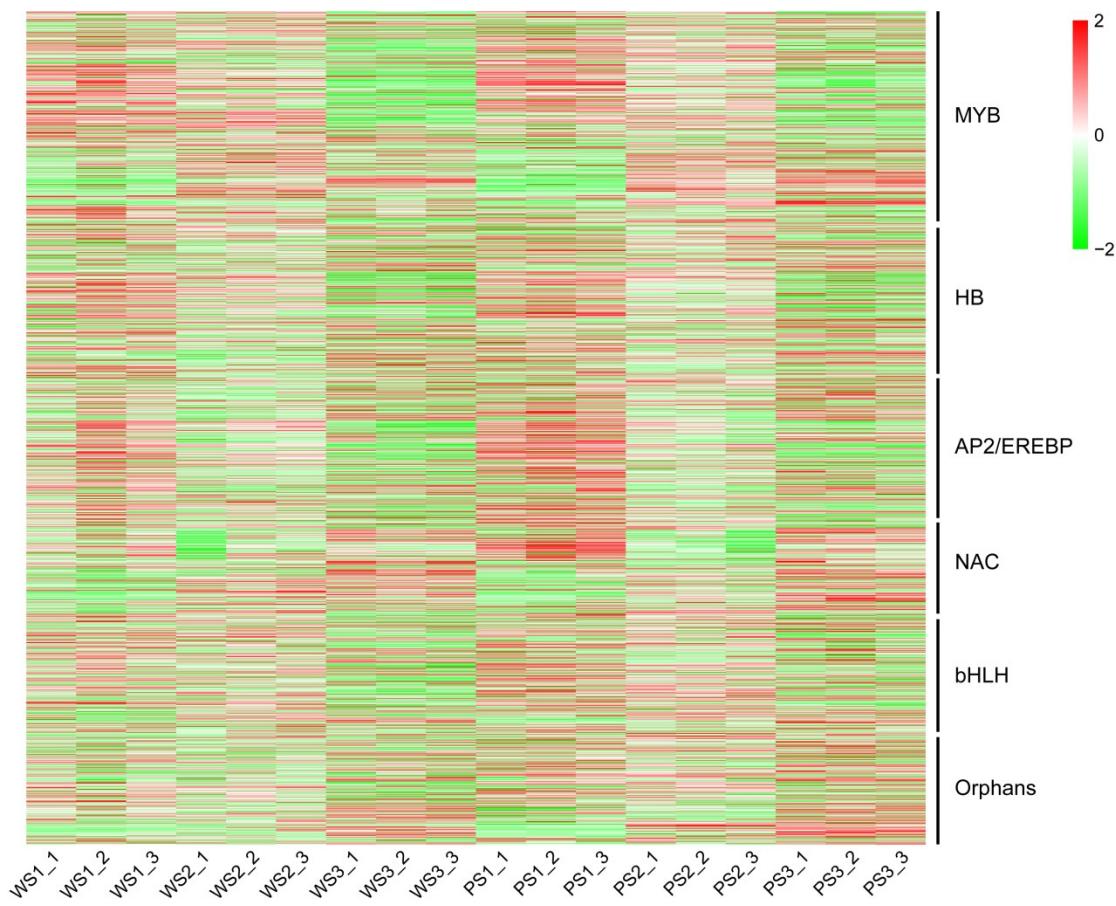

**Supplementary Fig. S4. A neighbour-joining tree based on amino acid sequences of LaHMGR and selected plant HMGR sequences.**

The tree was generated using Phylogeny Analysis MEGA7.0 program (Kumar et al., 2016).

**Supplementary Fig. S5. Amino acid sequences alignment of LaPPS and selected plant PPS sequences.**

**Supplementary Fig. S6. Differential expression of the unigenes encoding putative Transcription factors.**

PS1, PS2, and PS3 indicate the purple lavender flowers at Bud I, Bud II, and flowering stage 50%, respectively. WS1, WS2, and WS3 indicate the white lavender flowers at Bud I, Bud II, and flowering stage 50%, respectively, and 1, 2, and 3 represent three independent biological replicates.

**Supplementary Fig. S7. Field grown *Lavandula angustifolia*.** The white flowers on the left are YXA-5, and the purple flowers on the right are Xinxun 2.
