This supplementary material has been provided by the authors to give readers additional information about their work.

eTable 1. Comorbid Conditions. Definitions were those of the Centers for Medicare and Medicaid Services Chronic Conditions Warehouse. “Ever” conditions were those present at any time from enrollment in Medicare to either the time of total knee arthroplasty (TKA) or the end of each calendar year (for those without TKA). “Recent” conditions were those present in the one year prior to TKA or any time in the calendar year (for those without TKA).

Acute myocardial infarction, recent	Ischemic heart disease, ever
Atrial fibrillation, recent	Congestive heart failure, ever
Chronic skin ulcer, recent	Stroke, ever
Diabetes mellitus, recent	Peripheral vascular disease, ever
Chronic kidney disease, recent	Chronic obstructive pulmonary disease, ever
Depression, recent	Cirrhosis/chronic liver disease, ever
	HIV/AIDS, ever
	Dementia, ever
	Breast cancer, ever
	Lung cancer, ever
	Colorectal cancer, ever
	Endometrial cancer, ever
	Prostate cancer, ever
	Hematological malignancy, ever

eTable 2. Race/Ethnicity Composition of the Ten Health Referral Regions With the Lowest and Highest Observed/Expected Ratios for Rates of Primary Total Knee Arthroplasty.

Percentages may not add to 100% due to rounding.

Health Referral Region	Observed/expected ratio	% White	% Black	% Hispanic	% Asian	% Other
Bronx NY	0.52	47.0	33.1	11.7	2.7	5.4
Newark NJ	0.53	62.7	23.9	4.7	3.7	4.9

Provo UT	1.64	95.5	0.1	2.0	0.5	1.7
Idaho Falls ID	1.72	95.4	0.1	1.5	0.3	2.5

eTable 3. Distribution of Demographic and Clinical Characteristics of White Medicare Beneficiaries Age 65 to 89 Among Health Referral Regions. Values are percentages, except age, area-based socioeconomic score, and annual number of outpatient visits.

Variable	Minimum	10%	Median	90%	Maximum
Mean age, years	72.3	73.4	74.0	74.6	75.1
Men	42.7	44.3	45.7	48.0	52.2
Acute myocardial infarction	0.3	0.5	0.7	1.0	1.5
Atrial fibrillation	5.0	6.8	8.3	9.5	10.6
Breast cancer	2.9	3.8	4.3	4.9	5.9
Congestive heart failure	12.0	15.7	20.3	25.4	34.1
Chronic kidney disease	6.3	10.7	13.2	15.8	22.1
Colorectal cancer	1.4	1.8	2.2	2.6	3.1
Chronic obstructive pulmonary disease	11.0	16.0	21.9	27.8	35.2
Dementia	6.0	8.1	10.4	12.5	18.6
Depression	6.9	9.9	11.9	13.7	16.3
Diabetes mellitus	11.2	16.7	21.6	25.5	34.2
Endometrial cancer	0.3	0.5	0.7	0.9	1.2
Hematological malignancy	1.2	1.5	1.7	2.0	2.7
HIV/AIDS	0.0	0.0	0.1	0.1	1.0
Ischemic heart disease	24.1	29.9	39.1	49.3	59.6
Cirrhosis/chronic liver disease	3.2	4.5	5.7	7.7	17.6
Lung cancer	0.3	0.8	1.1	1.4	1.8
Prostate cancer	3.2	3.9	4.6	5.5	7.2
Peripheral vascular disease	6.7	11.0	16.3	22.0	30.6
Chronic skin ulcer	1.7	2.7	3.4	4.4	5.9
Stroke	7.0	8.9	11.9	14.2	17.0
Annual number of outpatient visits	3.6	5.3	6.8	8.5	11.6
Any knee osteoarthritis visit	3.8	5.4	6.8	8.0	10.5
Knee symptoms	3.3	4.9	5.9	7.5	9.6

Variable	Minimum	10%	Median	90%	Maximum
Knee osteoarthritis or knee symptoms	5.9	8.4	9.7	11.2	12.7
Percent obese	23.5	30.9	36.5	40.4	47.3
Percent with physical occupation	8.3	12.0	14.8	18.3	26.8
Percent smokers	9.0	17.1	22.3	26.4	29.8
Percent Medicare managed care	0.4	10.9	23.6	42.6	59.3
Poor	2.1	4.8	8.0	13.4	35.7
Mean area-based socioeconomic score ^a	-6.8	-2.2	0.9	6.1	13.0
Rural residence	0.0	1.2	24.1	50.3	84.7

^aBased on seven economic measures of the zip code of residence in the 2010 U.S. Census. A zip code at the national average on all measures would have a score of 0. A zip code whose values on all seven measures were one standard deviation below the national average would have a score of -7.0, and a zip code whose values on all seven measures were one standard deviation above the national average would have a score of +7.0.

eFigure 1. Observed/Expected Ratios for Rates of Primary Total Knee Arthroplasty Among Medicare Beneficiaries Age 65 to 89 in 2011-2015, by Health Referral Region.

Expected rates were based on models that adjusted for age, sex, and race/ethnicity.

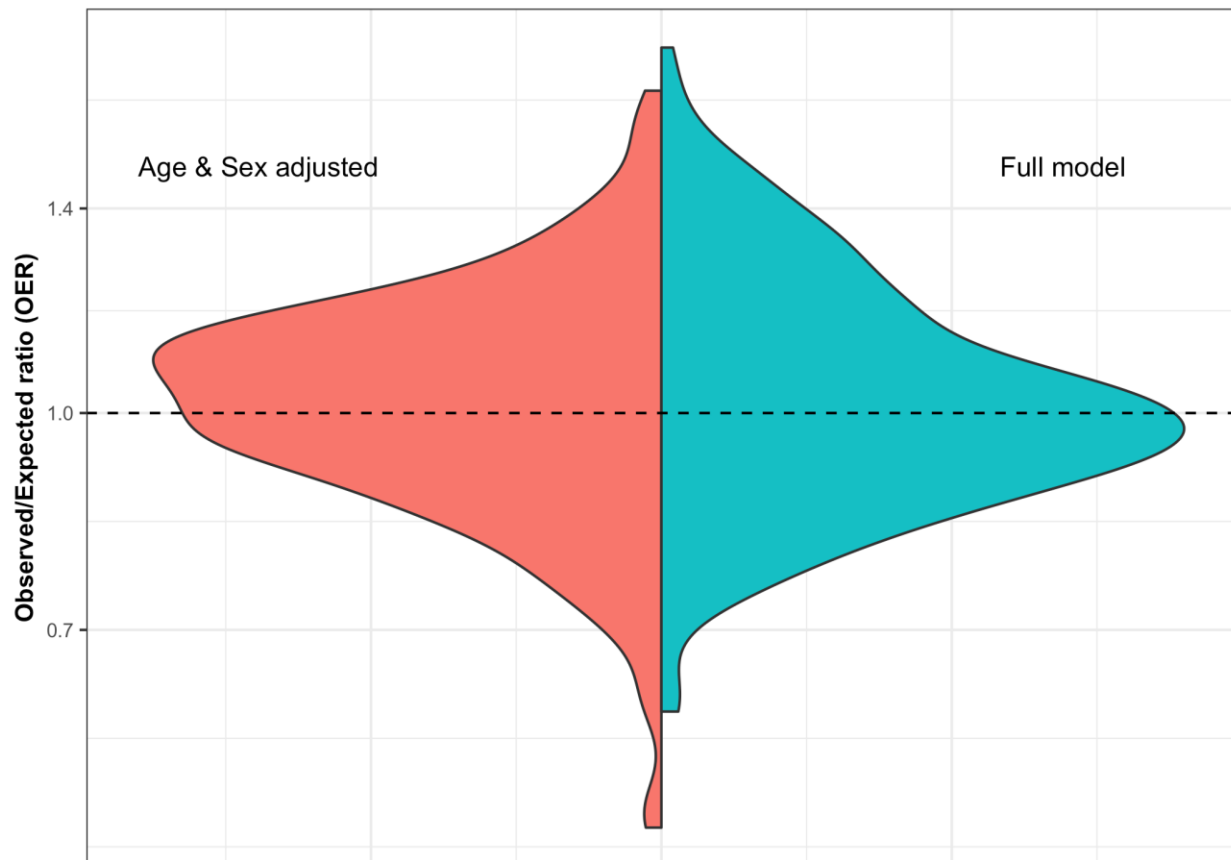

OER = observed/expected ratio.

eFigure 2. Association Between Observed/Expected Ratios for Rates of Primary Total Knee Arthroplasty by Health Referral Region and the Percent of White, Black, Hispanic, and Asian Medicare Beneficiaries Living in the Health Referral Region

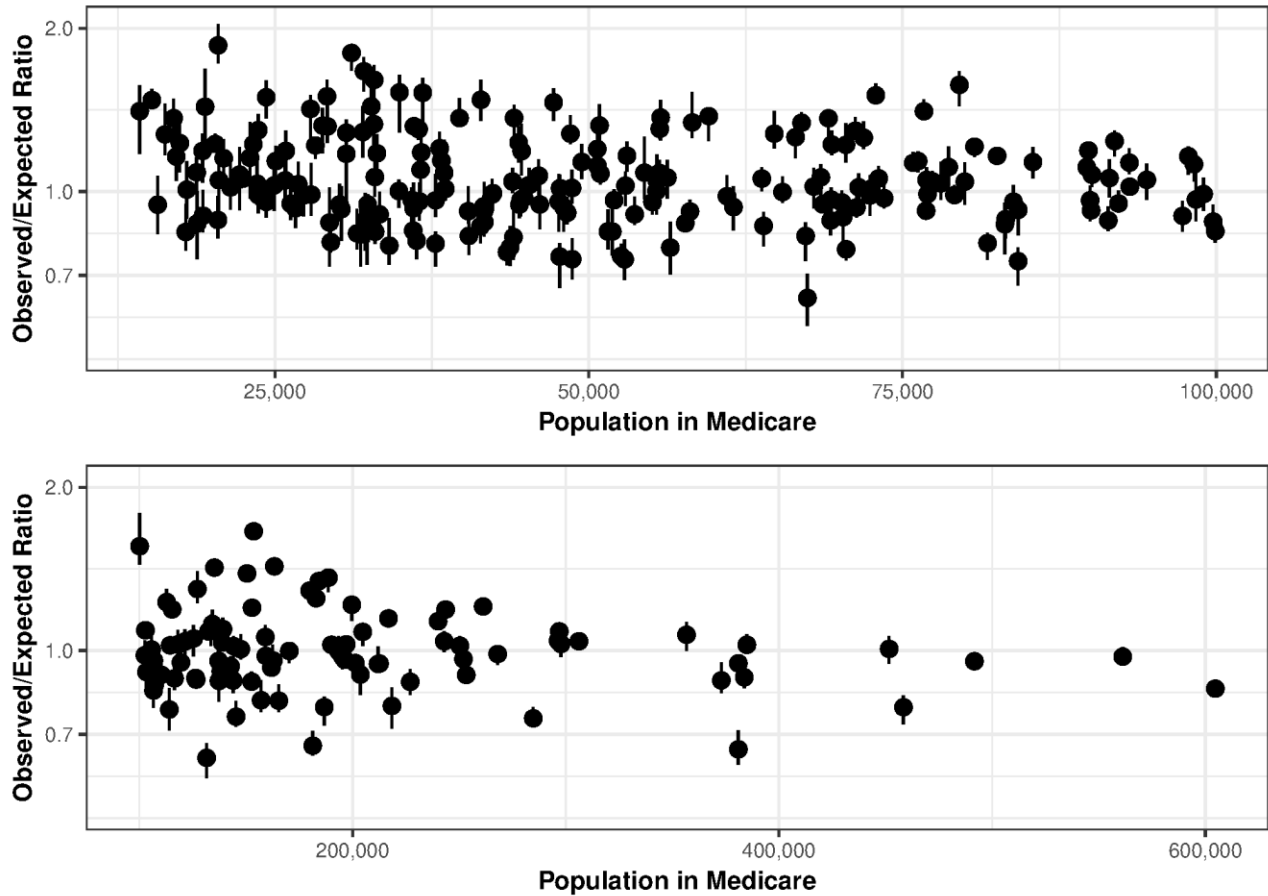

eFigure 3. Distribution of Observed/Expected Ratios for Rates of Primary Total Knee Arthroplasty Among White Medicare Beneficiaries With Expected Rates Based on the Age- and Sex-Adjusted Model, or Based on the Full Model. The full model adjusted for age, sex, presence of knee symptoms, area-based measures of obesity, smoking, and physically demanding occupations, 20 comorbid conditions, poverty, and area-based socioeconomic score. Observed/expected ratios based on the full model were more concentrated around 1.0 (kurtosis 3.079) than the age-and sex-adjusted model (kurtosis 4.21), indicating a 29% reduction in spread among Health Referral Regions.

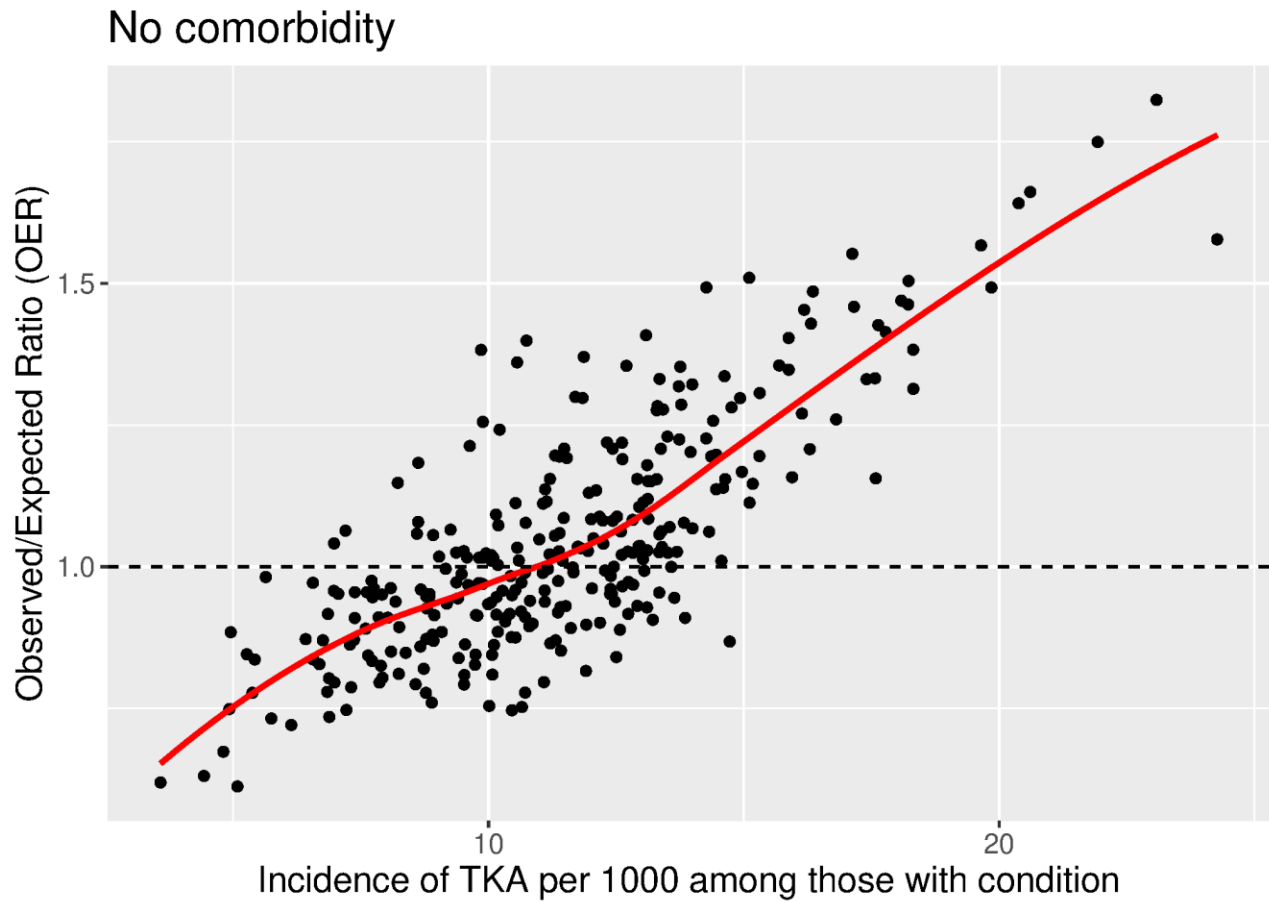

eFigure 4. Range of Observed/Expected Ratios Over the 5 Study Years in Each Health Referral Region. Error bars represent the minimum and maximum ratio.

Observed/expected ratios are ordered by the size of the Medicare population in each region.

eFigure 5. Association Between Rates of Primary Total Knee Arthroplasty Among White Medicare Beneficiaries Who Were Age 65 to 69 With No Comorbidity and the Observed/Expected Ratio for Rates of Total Knee Arthroplasty by Health Referral Region

eFigure 6. Percentage of Primary Total Knee Arthroplasties Among White Medicare Beneficiaries by High Volume and Low Volume Surgeons in Each Health Referral Region. Each column represents a region, ordered from low to high based on their observed/expected ratio. Dark blue represents the percentage of knee arthroplasties in the region performed by surgeons who performed on average 50 or more procedures annually.

eFigure 7. Association Between the Observed/Expected Ratios for Rates of Primary Total Knee Arthroplasty Between Black and White Medicare Beneficiaries. Health Referral Regions that included at least 15,000 black beneficiaries are shown.
