Supplemental Figure 1

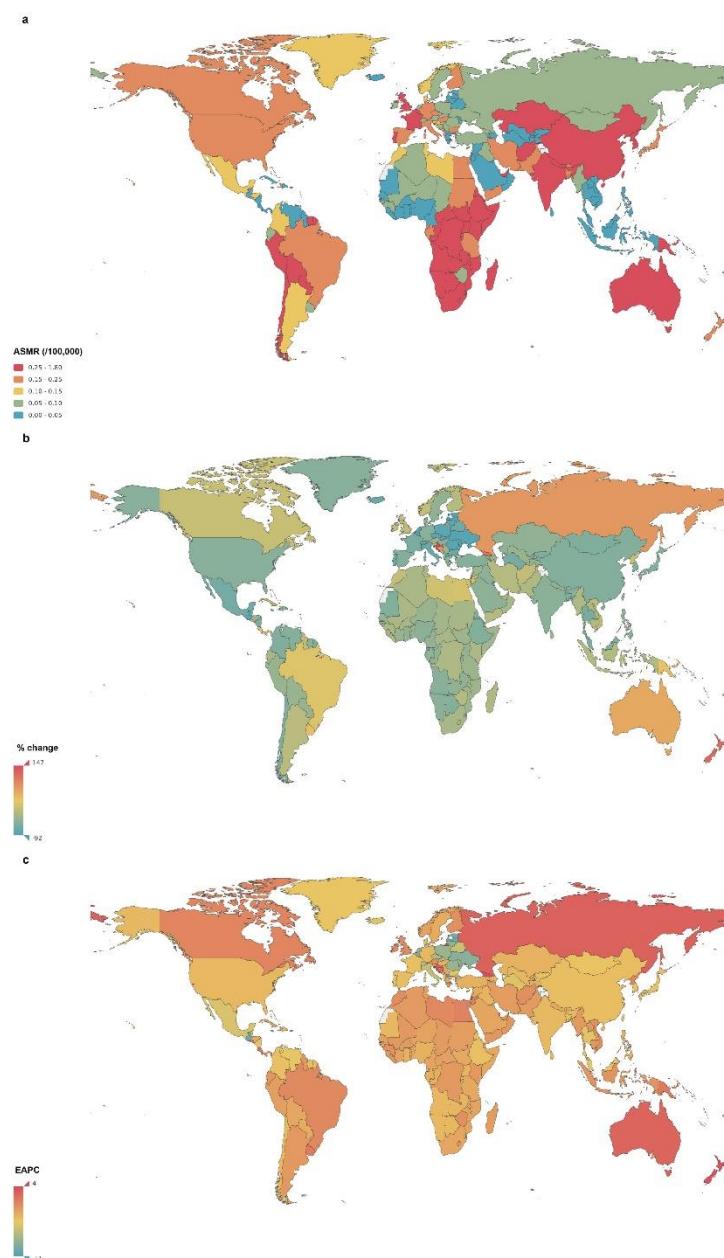

The relative percentage change in the age-standardized mortality rate (ASMR) of chronic obstructive pulmonary disease (COPD) for both sexes in 195 countries and territories between 1990 and 2017.

Supplemental Figure 2

The global mortality rate of pneumoconiosis for both sexes in 195 countries and territories.

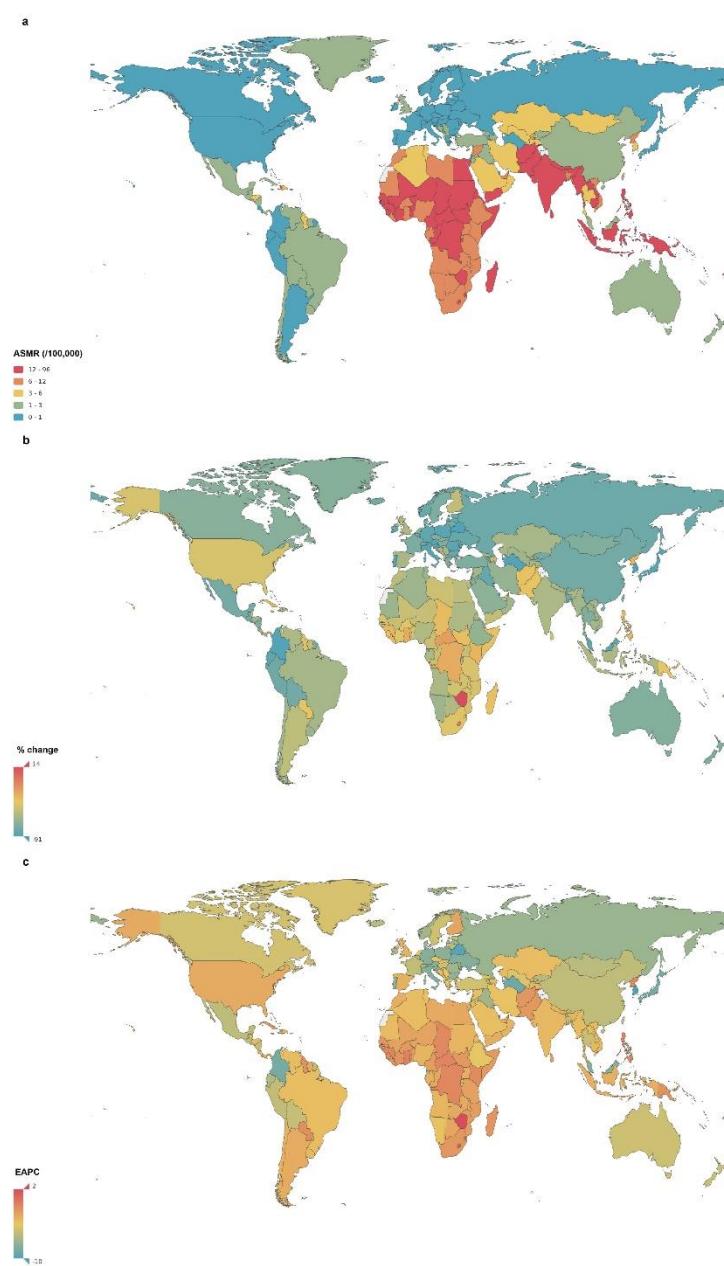

- a. The age-standardized mortality rate (ASMR) of pneumoconiosis for both sexes combined in 2017.
- b. The relative percentage change in the ASMR of pneumoconiosis for both sexes between 1990 and 2017.
- c. The estimated annual percentage change (EAPC) in the ASMR of pneumoconiosis for both sexes from 1990 to 2017.

Supplemental Figure 3

The global mortality rate of asthma for both sexes in 195 countries and territories.

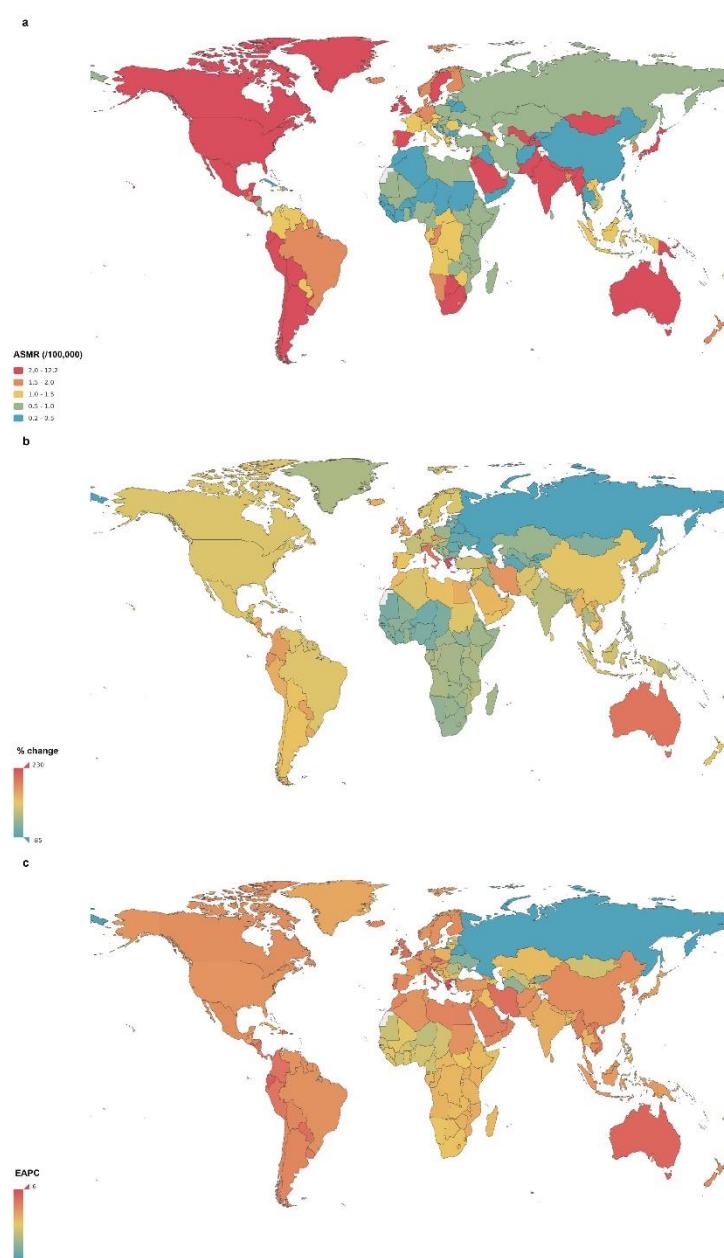

- a. The age-standardized mortality rate (ASMR) of asthma for both sexes combined in 2017.
- b. The relative percentage change in the ASMR of asthma for both sexes between 1990 and 2017.
- c. The estimated annual percentage change (EAPC) in the ASMR of asthma for both sexes from 1990 to 2017.

Supplemental Figure 4

The global mortality rate of interstitial lung disease and pulmonary sarcoidosis for both sexes in 195 countries and territories.

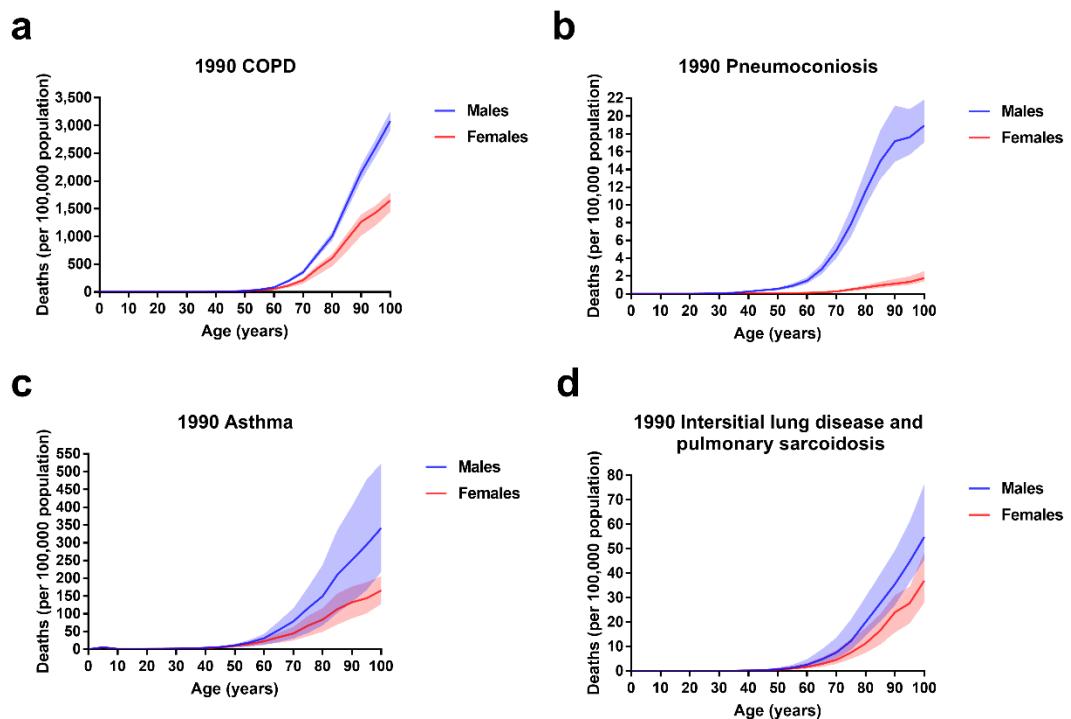

- a. The age-standardized mortality rate (ASMR) of interstitial lung disease and pulmonary sarcoidosis for both sexes combined in 2017.
- b. The relative percentage change in the ASMR of interstitial lung disease and pulmonary sarcoidosis for both sexes between 1990 and 2017.
- c. The estimated annual percentage change (EAPC) in the ASMR of interstitial lung disease and pulmonary sarcoidosis for both sexes from 1990 to 2017.

Supplemental Figure 5

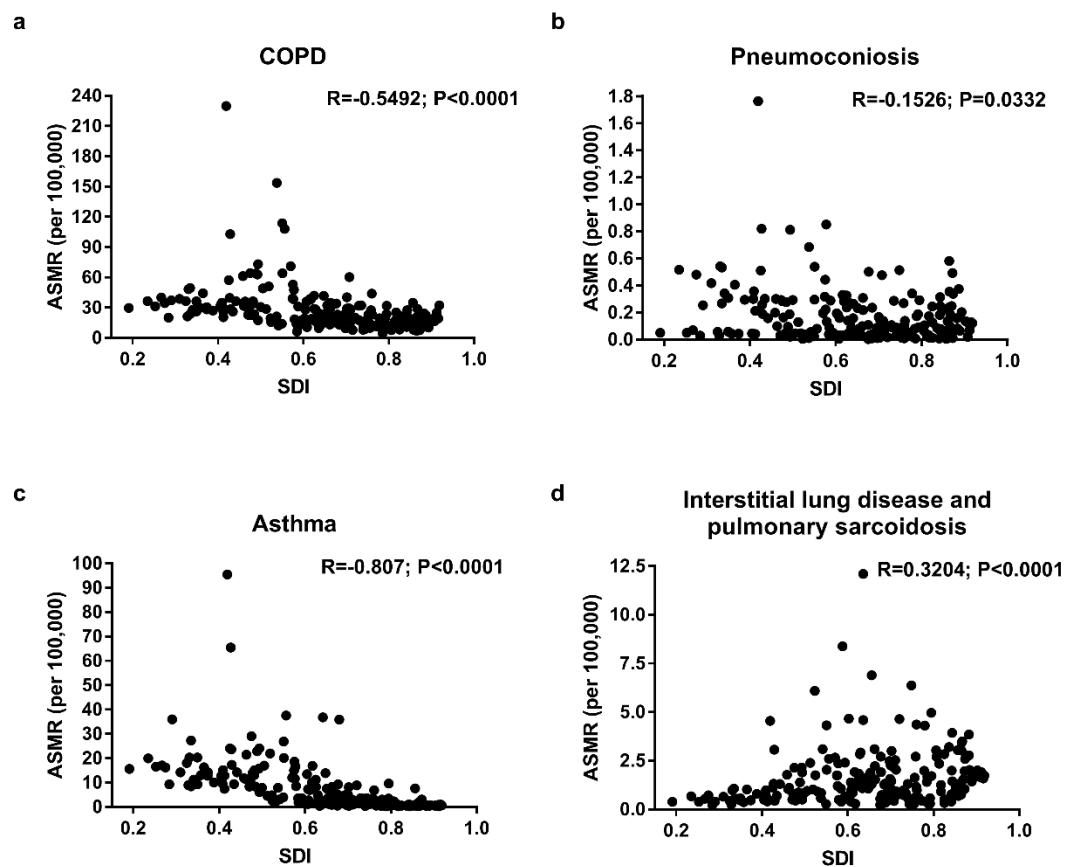

The global mortality rates of chronic obstructive pulmonary disease (COPD) (a), pneumoconiosis (b), asthma (c), and interstitial lung disease and pulmonary sarcoidosis (d) by age and sex in 1990.

The shading indicates 95% uncertainty intervals.

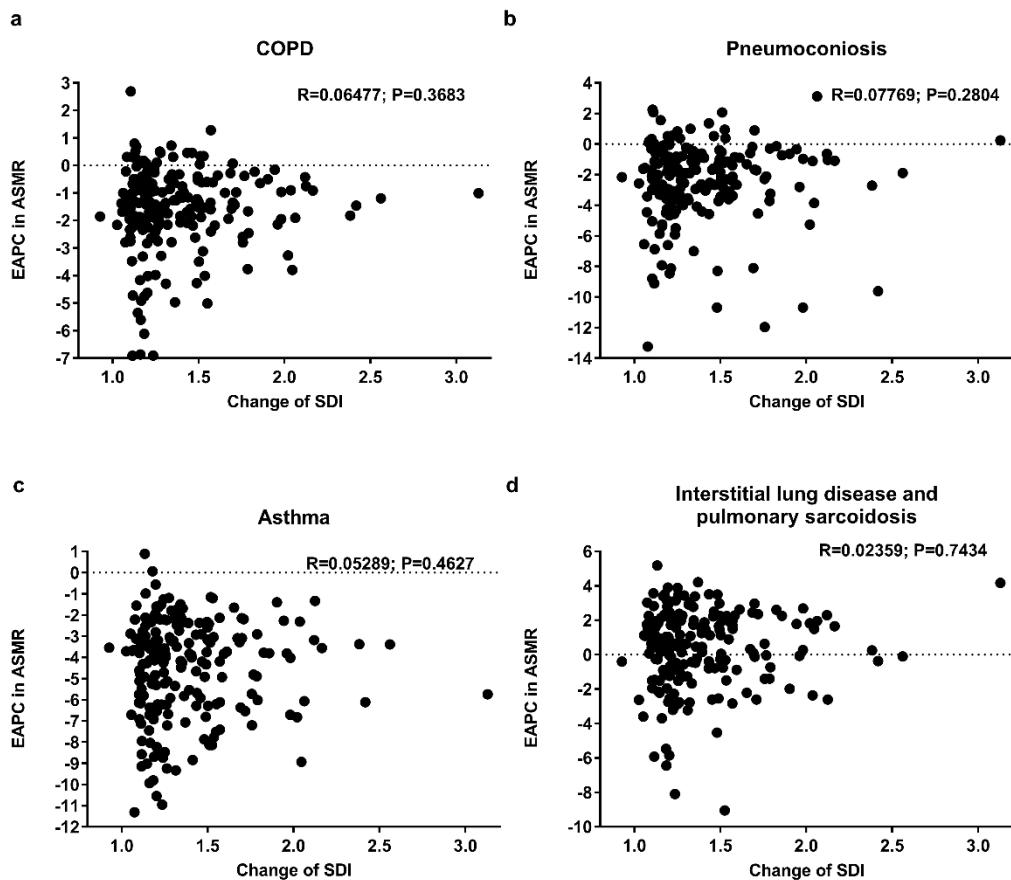

Supplemental Figure 6

The correlation between the sociodemographic index (SDI) and age-standardized mortality rates (ASMRs) of chronic obstructive pulmonary disease (COPD) (a), pneumoconiosis (b), asthma (c) and interstitial lung disease and pulmonary sarcoidosis (d) in 2017.

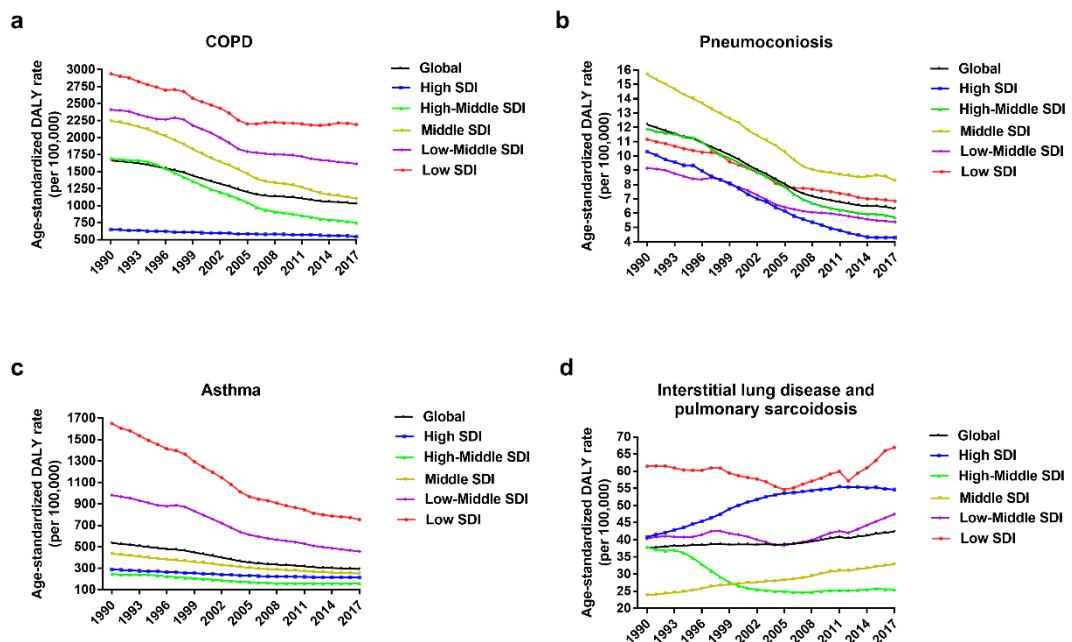

Supplemental Figure 7

The correlation between the change in the socio-demographic index (SDI) and estimated annual percentage change (EAPC) in the age-standardized mortality rates (ASMRs) of chronic obstructive pulmonary disease (COPD) (a), pneumoconiosis (b), asthma (c), and interstitial lung disease and pulmonary sarcoidosis (d) from 1990 to 2017.

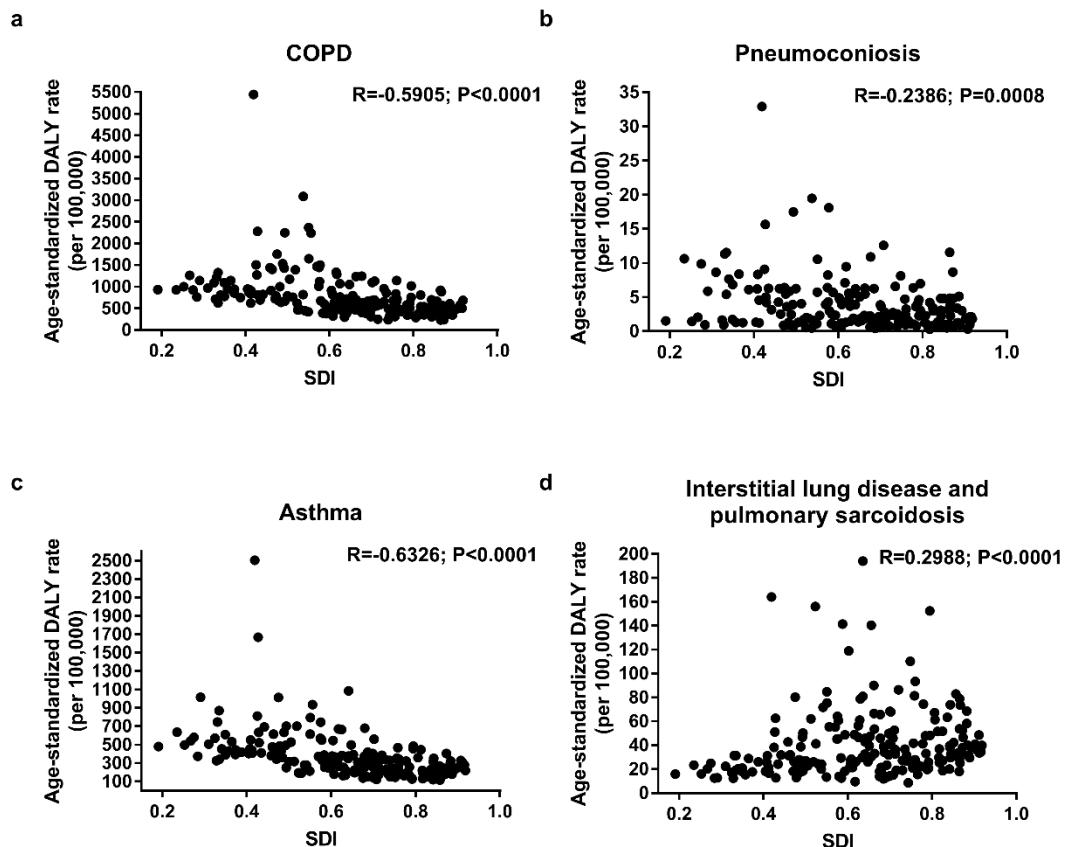

Supplemental Figure 8

The age-standardized disability-adjusted life years (DALYs) of chronic obstructive pulmonary disease (COPD) (a), pneumoconiosis (b), asthma (c), and interstitial lung disease and pulmonary sarcoidosis (d) grouped by sociodemographic index (SDI) quintiles from 1990 to 2017.

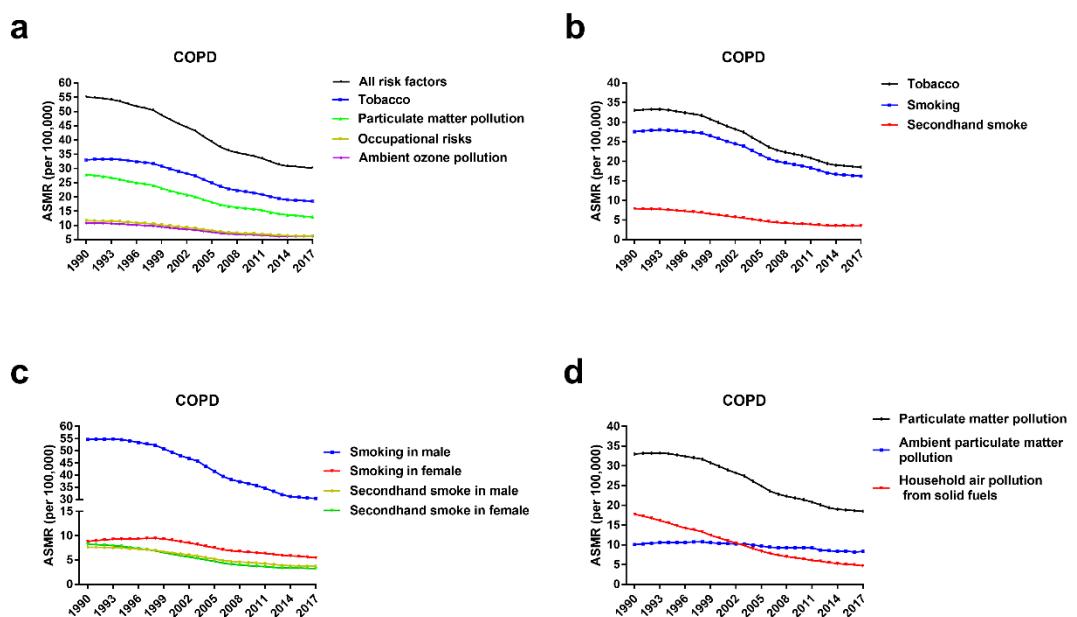

Supplemental Figure 9

The correlation between the sociodemographic index (SDI) and age-standardized disability-adjusted life years (DALYs) of chronic obstructive pulmonary disease (COPD) (a), pneumoconiosis (b), asthma (c), and interstitial lung disease and pulmonary sarcoidosis (d) in 2017.

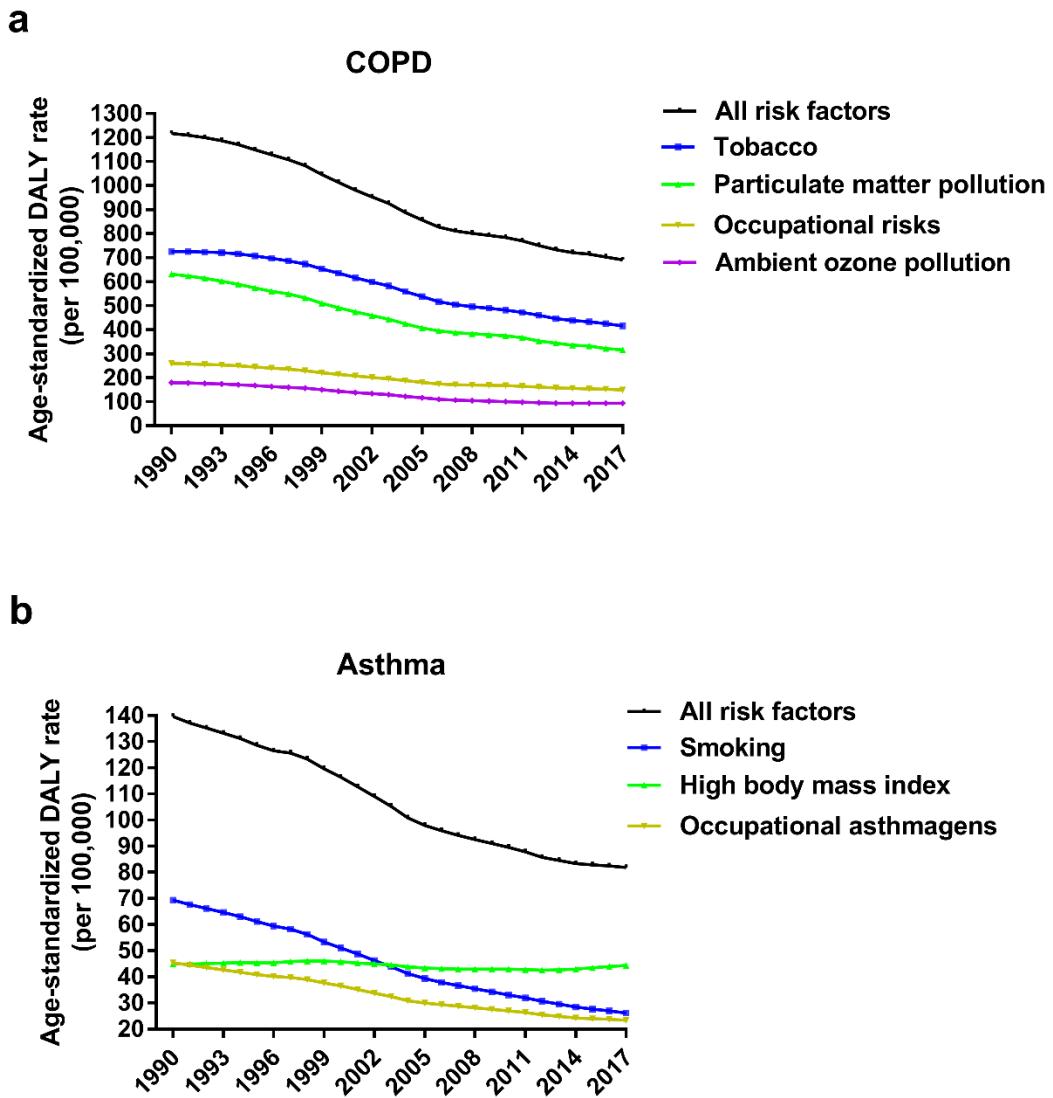

Supplemental Figure 10

- a. The age-standardized mortality rates (ASMRs) of chronic obstructive pulmonary disease (COPD) attributed to the four types of risk factors in both sexes from 1990 to 2017.
- b. The ASMRs of COPD attributed to tobacco, smoking and secondhand smoke in both sexes from 1990 to 2017.
- c. The ASMRs of COPD attributed to smoking and secondhand smoke by sex from 1990 to 2017.
- d. The ASMRs of COPD attributed to particulate matter pollution, ambient particulate matter pollution and household air pollution from solid fuels for both sexes from 1990 to 2017.

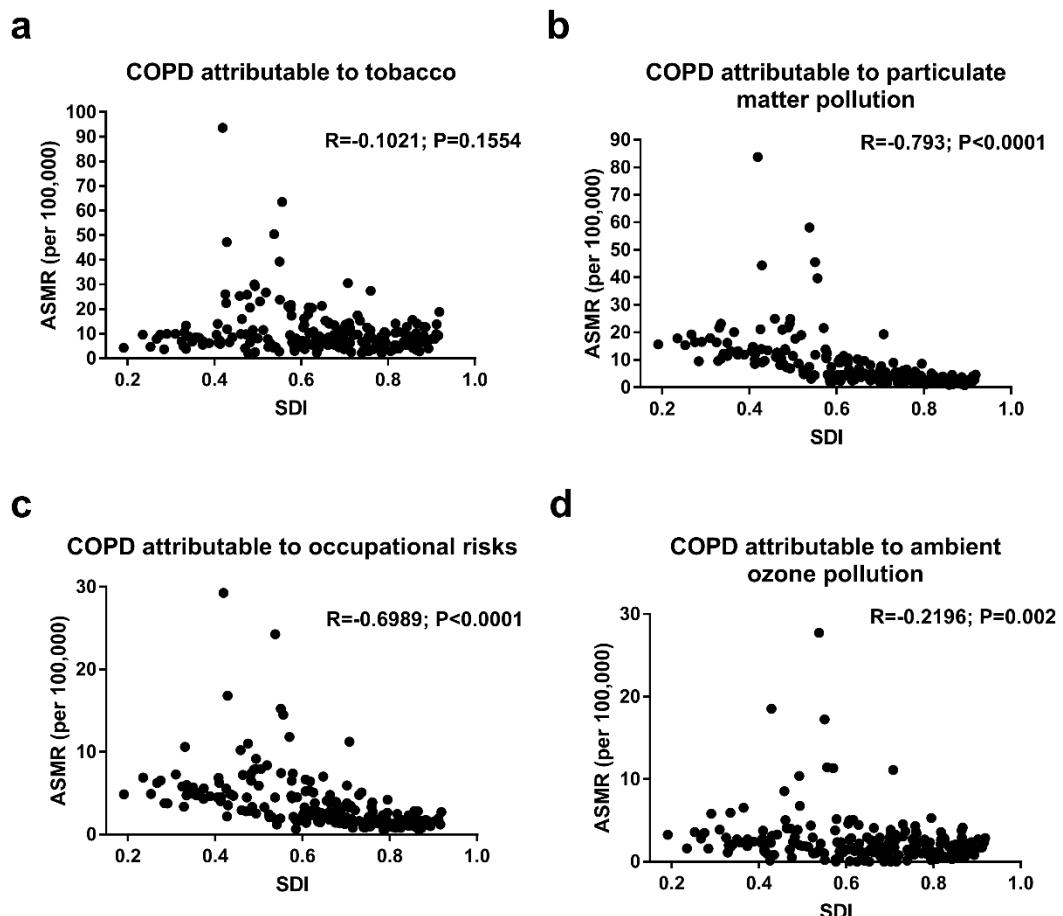

Supplemental Figure 11

- a. The age-standardized disability-adjusted life years (DALYs) of chronic obstructive pulmonary disease (COPD) attributed to the four kinds of risk factors for both sexes from 1990 to 2017.
- b. The age-standardized disability-adjusted life years (DALYs) of asthma attributed to the three kinds of risk factors for both sexes from 1990 to 2017.

Supplemental Figure 12

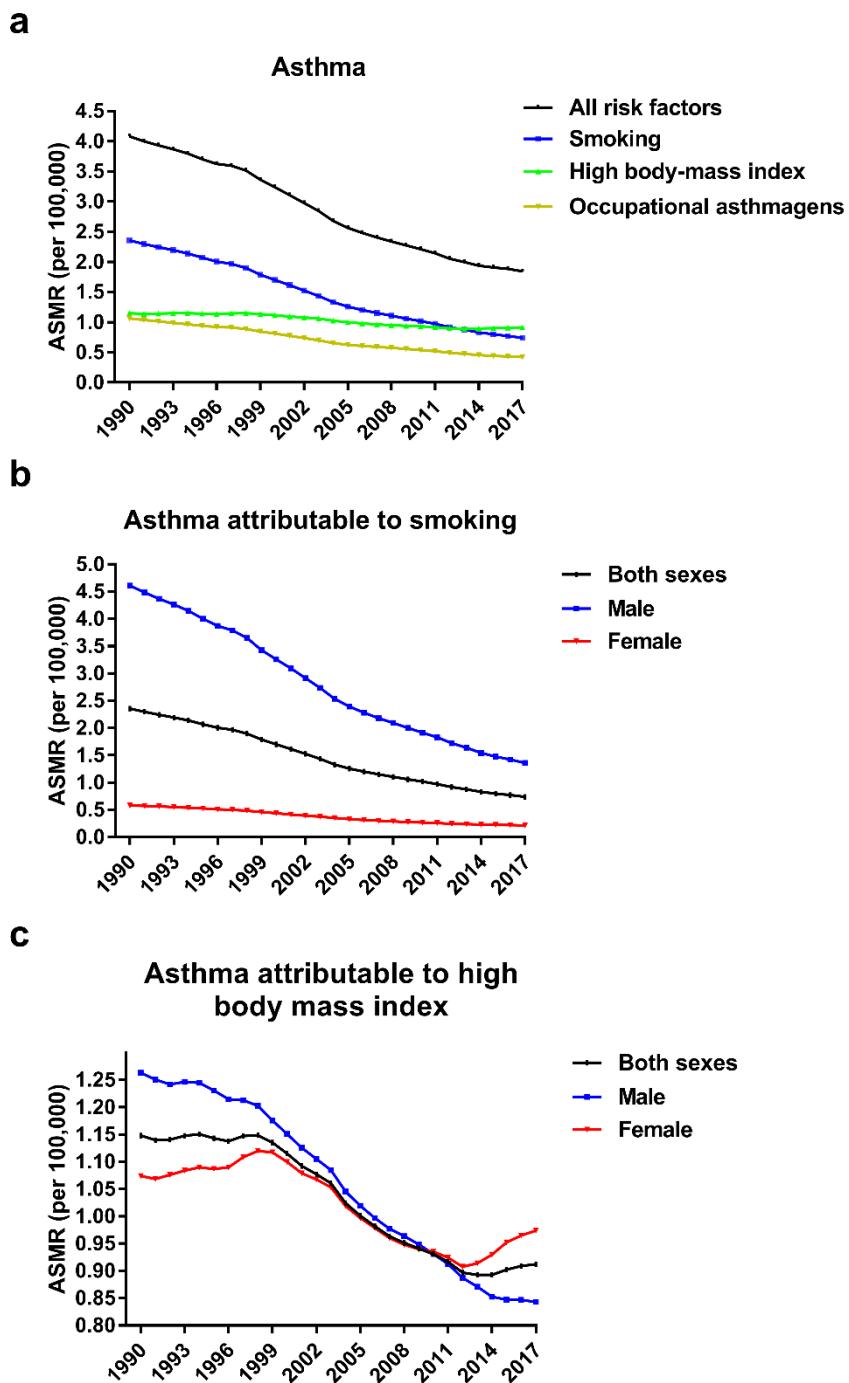

The correlation between the sociodemographic index (SDI) and age-standardized mortality rates (ASMRs) of chronic obstructive pulmonary disease (COPD) attributed to tobacco (a), particulate matter pollution (b), occupational risks (c), and ambient ozone pollution (d) in 2017.

Supplemental Figure 13

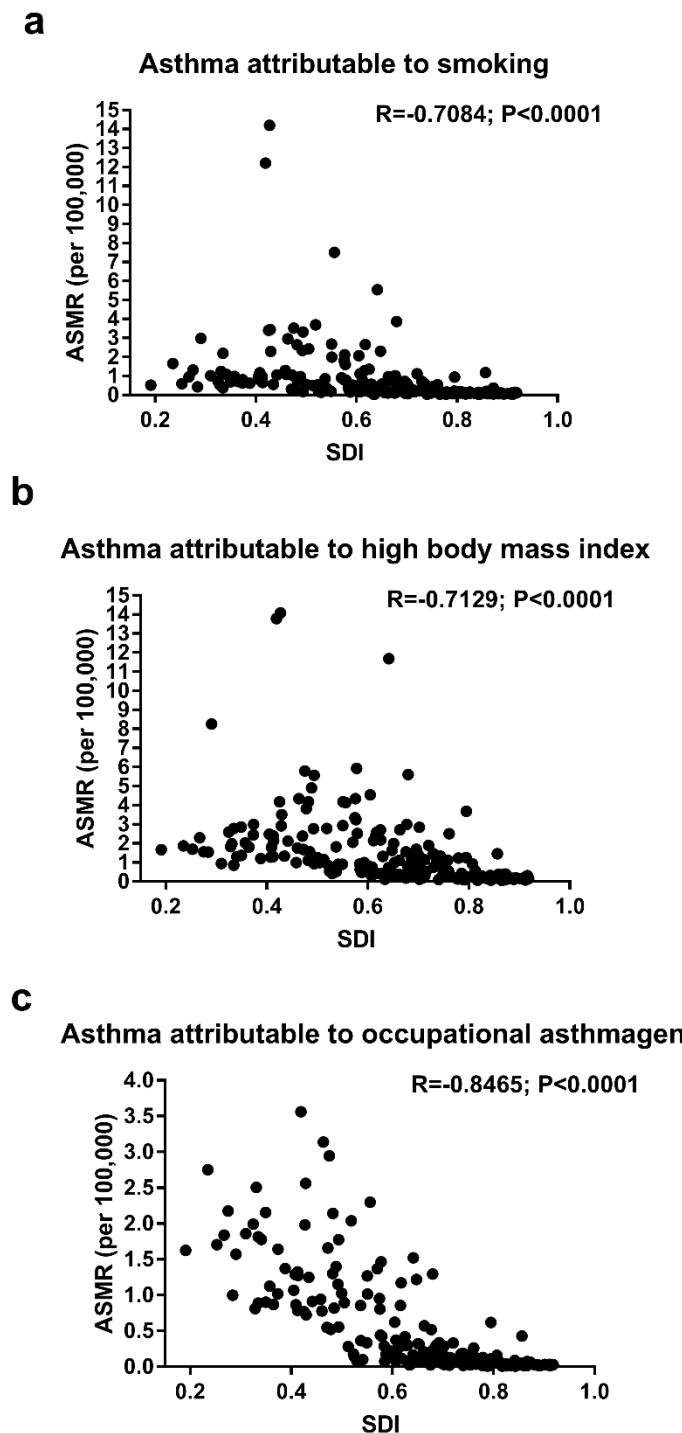

- a. The age-standardized mortality rates (ASMRs) of asthma attributed to the three types of risk factors for both sexes from 1990 to 2017.
- b. The ASMR of asthma attributed to smoking by sex from 1990 to 2017.
- c. The ASMR of asthma attributed to a high body mass index by sex from 1990 to 2017.

ASMR, age-standardized mortality rate.

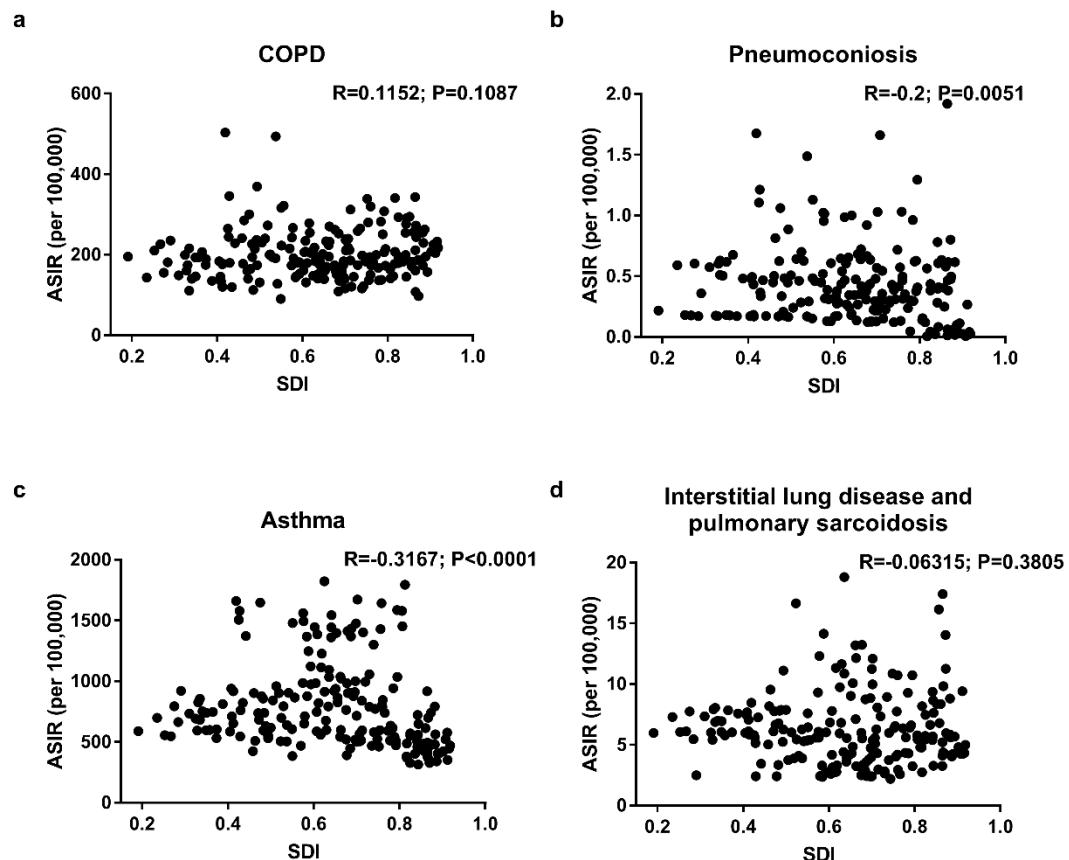

Supplemental Figure 14

The correlation between the sociodemographic index (SDI) and age-standardized mortality rates (ASMRs) of asthma attributed to smoking (a), a high body mass index (b), and occupational asthmagens (c) in 2017.

Supplemental Figure 15

The correlation between the sociodemographic index (SDI) and age-standardized incidence rates (ASIRs) of chronic obstructive pulmonary disease (COPD) (a), pneumoconiosis (b), asthma (c), and interstitial lung disease and pulmonary sarcoidosis (d) in 2017.

Supplemental Table 1. List of International Classification of Diseases (ICD) codes

Cause	ICD-10
Chronic respiratory diseases	D86-D86.2; D86.9; G47.3, J30-J35.9; J37-J39.9; J41-J46.9; J60-J63.8; J65-J68.9; J70; J70.8-J70.9; J82; J84-J84.9; J91-J92.9
Chronic obstructive pulmonary disease	J40-J44.9; J47-J47.9
Pneumoconiosis	J60-63.8; J65-J65.0; J92.0
Silicosis	J62-J62.9
Asbestosis	J61-J61.0; J92.0
Coal workers pneumoconiosis	J60-J60.0
Other pneumoconiosis	J63-63.8; J65-65.0
Asthma	J45-J46.9
Interstitial lung disease and pulmonary sarcoidosis	D86-86.2; D86.89-D86.9; J84-J84.9

Supplemental Table 2. The global mortality, ASMR, and DALY due to chronic respiratory diseases in 1990 and 2017

	Chronic respiratory diseases	Chronic obstructive pulmonary disease	Pneumoconiosis			Asthma	Interstitial lung disease and pulmonary sarcoidosis
			Overall	Silicosis	Asbestosis	Coal workers pneumoconiosis	Other pneumoconiosis

## Supplemental material

### Socio-Demographic Index (SDI) Definitions and Method<sup>11</sup>

The Socio-demographic Index (SDI) is a composite indicator of development status strongly correlated with health outcomes. In short, it is the geometric mean of 0 to 1 indices of total fertility under 25 (TFU25), mean education for those aged 15 and older (EDU15+), and lag distributed income (LDI) per capita.

An index score of 0 represents the minimum level of each covariate input past which selected health outcomes can get no worse, while an index score of 1 represents the maximum level of each covariate input past which selected health outcomes cease to improve. As a composite, a location with an SDI of 0 would have a theoretical minimum level of development relevant to these health outcomes, while a location with an SDI of 1 would have a theoretical maximum level of development relevant to these health outcomes.

The final scales for GBD 2017 are summarized in table below.

Input	Lower Bound	Upper Bound
TFU25	0	3
LDI per capita	250 USD (5.52 log USD) <sup>a</sup>	60,000 USD (11.00 log USD)
EDU15+	0 years	17 years

<sup>a</sup>The minimum for the LDI scale was originally set at the theoretical limit of 0 USD, as we did not observe an asymptotic relationship between log(LDI) and E<sub>0</sub> or 5q0 at lower values of log(LDI). Empirically, however, we also did not observe an LDI below 350 USD (5.86 log USD) for the estimation period 1970-2016. In log-space, this meant that approximately half of our scale was not being utilized, compressing the observed variation in LDI and diminishing its meaningful contribution to SDI. Accordingly, we set the lower limit on LDI to 250 USD (5.52 log USD) to ensure we were fully utilizing the range of the scale to capture its variation across space and time, as is the case with the other two inputs.

Using scales described above, we computed the index scores underlying SDI as follows:

$$I_{Cly} = (C_{ly} - C_{low}) / (C_{high} - C_{low})$$

Where  $I_{cly}$  – the index for covariate  $C$ , location  $l$ , and year  $y$  – is equal to the difference between the value of that covariate in that location-year and the lower bound of the covariate divided by the difference between the upper and lower bounds for that covariate. If the values of input covariates fell outside the upper or lower bounds (e.g. LDI per capita greater than 60,000 USD), they were mapped to the respective upper or lower bounds. The index value for TFU25 was computed as  $1 - I_{TFU25ly}$ , as lower TFU25s correspond to higher levels of development, and thus higher index scores. For GBD 2017 we expanded the computation of SDI to 890 national and subnational locations spanning the time period 1950-2017.

The composite SCI was the geometric mean of these three indices for a given location-year. The cutoff values used to determine quintiles for analysis were computed using country-level estimates of SDI for the year 2017, excluding countries with populations less than 1 million.

### Example Calculation

Below we present the calculation of SDI for Mexico in the year 2010

$$TFU25 = 1.09; \text{Mean educ yrs pc} = 8.23; \lnLDI = 9.60$$

$$I_{TFU25} = 1 - \frac{1.09 - 0}{3 - 0} = .637$$

$$I_{Educ} = \frac{8.23 - 0}{17 - 0} = .484$$

$$I_{\lnLDI} = \frac{9.60 - 5.52}{11.00 - 5.52} = .744$$

$$SDI = \sqrt[3]{I_{TFU25} * I_{Educ} * I_{\lnLDI}} = \sqrt[3]{.637 * .484 * .744} = .611$$

**The SDI values by location in 2017 are provided in table below**

Location ID	Location Name	SDI Index Value	SDI Quintile
1	Global	0.652	
31	Central Europe, Eastern Europe, and Central Asia	0.766
