

Supplementary Fig. 1.

Weekly glucose measurements to evaluate the hypoglycemic effect of treatment using dapagliflozin (0.1 mg/kg) alone, insulin (3-5U/rat) alone, or a combination of dapagliflozin (0.1 mg/kg) and insulin (1.5-2.5U/rat) in the 3-week study. Values are expressed as mean \pm standard deviation.

Supplementary Fig. 2.

Weekly body weight measurements to evaluate the hypoglycemic effect of treatment using dapagliflozin (0.1 mg/kg) alone, insulin (3-5U/rat) alone, or a combination of dapagliflozin (0.1 mg/kg) and insulin (1.5-2.5U/rat) in the 3-week study. Values are expressed as mean \pm standard deviation.
