Supplementary material

Supplementary Figure S1. Relative net root growth (RNRG %) mean for $F_{2:3}$ progeny showing genotypic classes of the Al tolerance QTLs alleles. Progeny homozygous for the allele donated by the Al-sensitive parent, SCH3, are shown in B, whereas progeny homozygous B for the Al-tolerant parent, 203B-14, are shown in A. Means for heterozygous are shown in H. **(a)** QTLs with favorable allele derived from 203B-14. **(b)** QTLs with favorable allele derived from SCH3.

Supplementary Table S1. Variance analysis for relative net root growth in the F_{2:3} families derived from the cross 203B-14 x SCH3.
