SUPPLEMENTARY FIG. S8. DNA mismatch detection assays using Cel-I enzyme for predicted off-targets. **(A)** PCR amplification products from predicted off-targets for the mouse *Rosa26* gRNA #1 used in a DNA mismatch detection assay with the Cel-I enzyme. **(B)** Mouse *Rosa26* gRNA #2 predicted off-targets in the same assay as in A above. **(C)** Rat *Calb2* gRNA #1 predicted off-targets in the same assay as in A above. WT (#1), an individual indel sample (#2) and pool of all the positive indel samples (#3). On-target represents the designed and intended mouse or rat target, respectively. Unlabeled and banded lanes represent DNA markers, unlabeled in this case.
