

**Comparison of multi-parallel qPCR and double-slide Kato-Katz for detection of soil-transmitted helminth infection among children in rural Bangladesh**

**S9 Figure. Cumulative probability that a stool sample was classified as negative using Kato-Katz among those classified as positive by qPCR by date of DNA extraction**

The date of DNA extraction was not recorded for the last 242 samples; we imputed the date for those samples as 1 day later than the last recorded date.
