

Supplementary Figure 2

S2. DAT enhances the sensitivity of cells to RSL3 and erastin-induced ferroptosis. A. MEF and HT1080 cells were treated with 0.5 μ M of RSL3 for 7 hours. B. MEF cells were treated with 1 μ M erastin for 10 hours and HT1080 for 12 hours. For A and B, 10 μ M of DAT was used. Upper panels show phase-contrast images and the lower panels show PI staining to indicate dead cells at 10X magnification.
