MCF-7 - Time 19 hr

S8 Data. Wound healing images following transfection with miRNA mimics (MCF-7_M) or miRNA inhibitors (MCF-7). Images from three independent experiments (one experiment per row). Data used to quantitate relative wound width (length of wound at 19 hours divided by length of wound at 0 hours). Images presented in Figs 2A and 2B; quantitation presented in Figs 2C and 2D; statistical analysis in S3 Data.
