

Supplementary Fig. 6

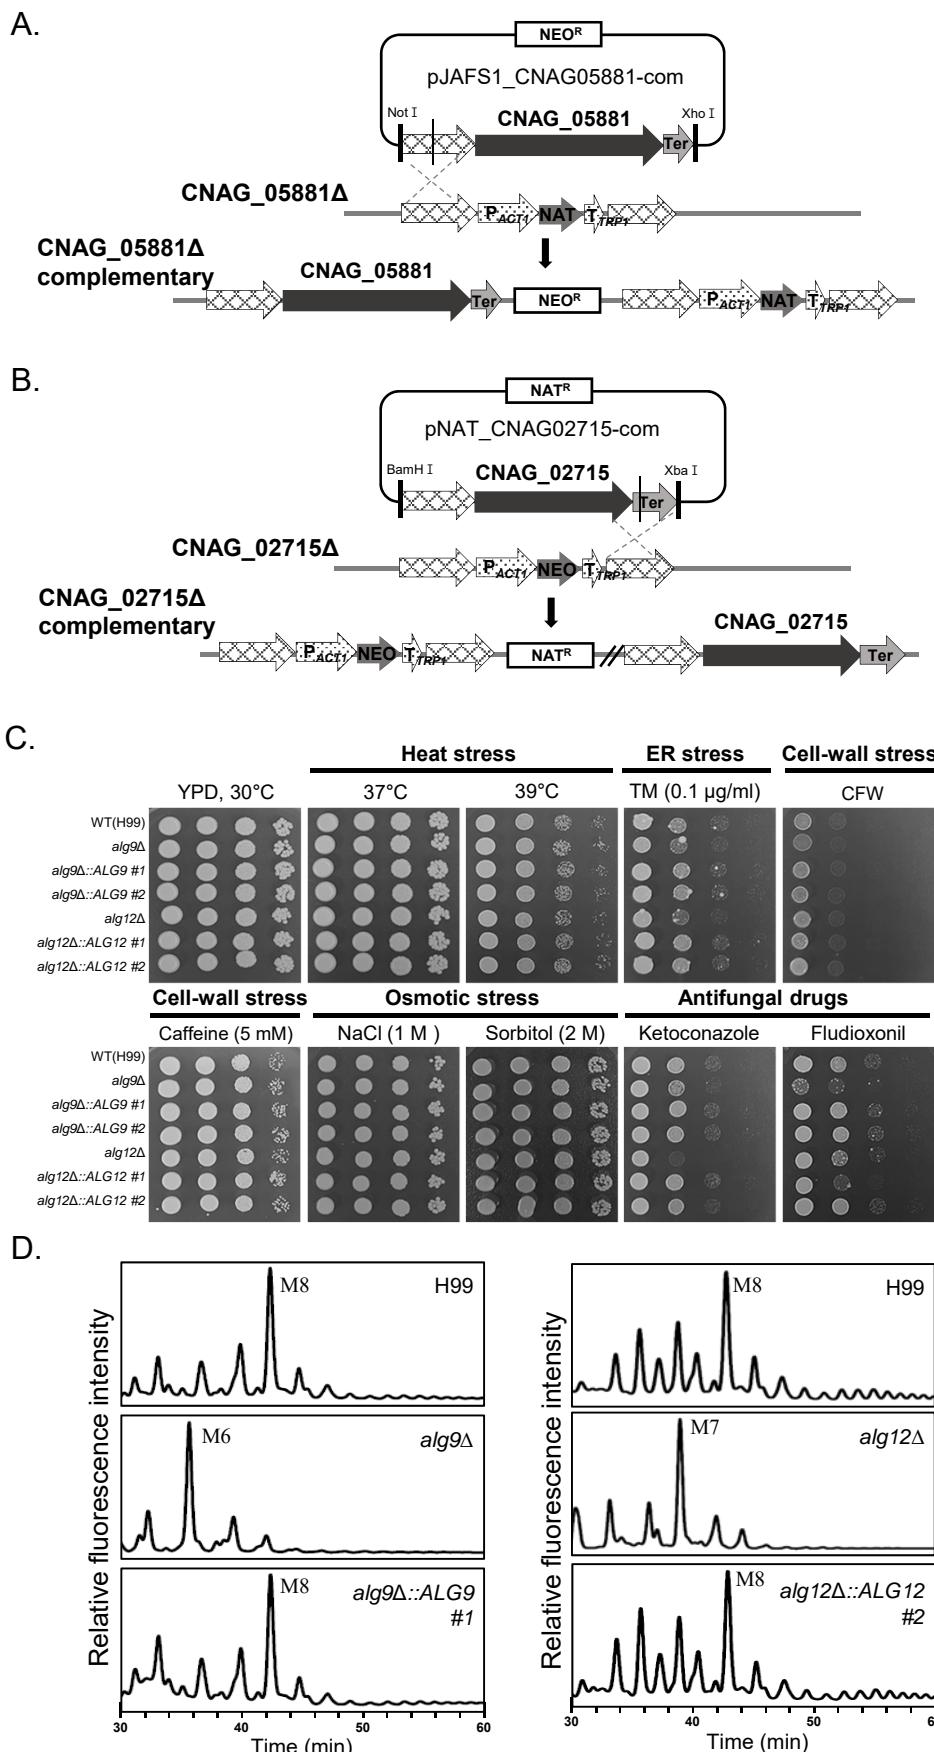

FIG S6 Construction of *ALG9* and *ALG12* complementation strain. (A) Strategy for CNAG_05881 complementary using the *NEO* split marker. Stable transformants were selected on YPD medium containing *NEO*. (B) Strategy for CNAG_02715 complementary using the *NAT* split marker. Stable transformants were selected on YPD medium containing *NAT*. (C) Spotting analysis of growth recovery of *C. neoformans* *alg9Δ::ALG9* and *alg12Δ::ALG12* strains under heat stress, ER stress, cell-wall stress, osmotic stress, and antifungal drug treatments. (D) HPLC-based neutral glycan profiles of H99, *alg9Δ*, *alg9Δ::ALG9 #1*, *alg12Δ* and *alg12Δ::ALG12 #2* strains.
