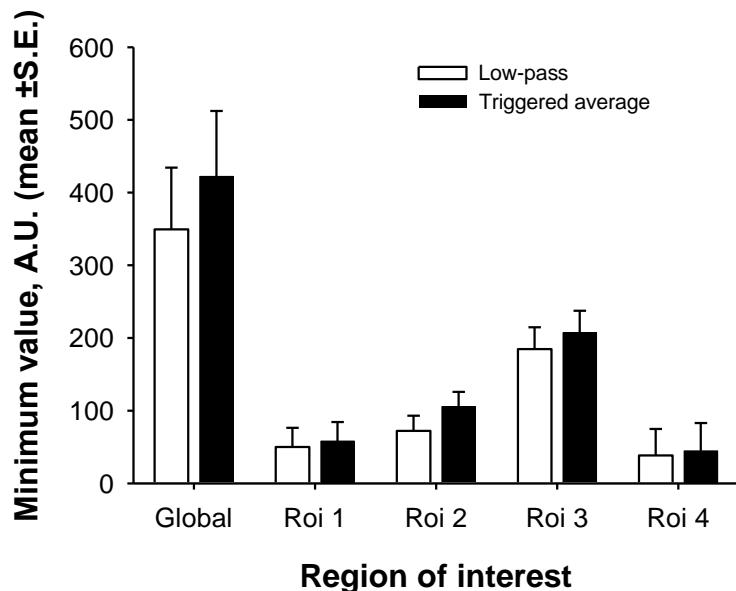

Fig. S1 Minimum values (expressed in EIT arbitrary units) of the global EIT signal and the 4 ROIs event triggered averaging resulted higher than low-pass filtering (all $p < 0.05$)

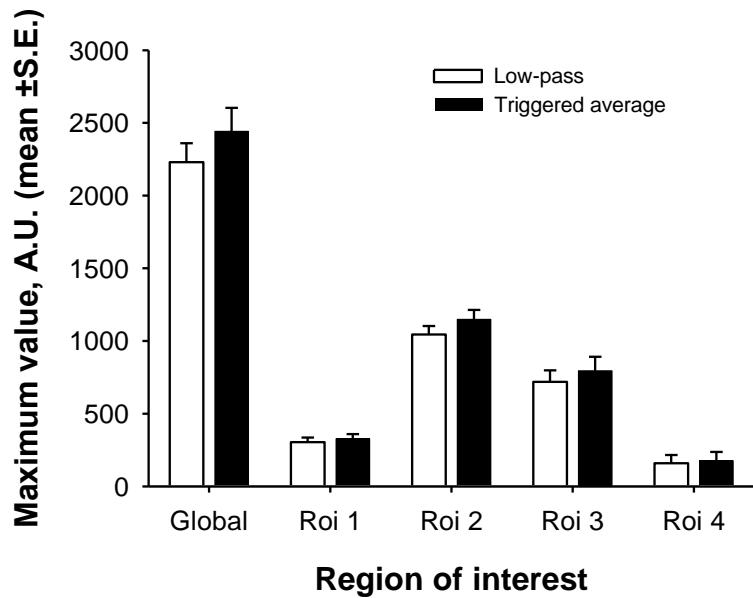

Fig. S2 Maximum values (expressed in EIT arbitrary units) of the global EIT signal and the 4 ROIs event triggered averaging resulted higher than low-pass filtering (all p<0.05)

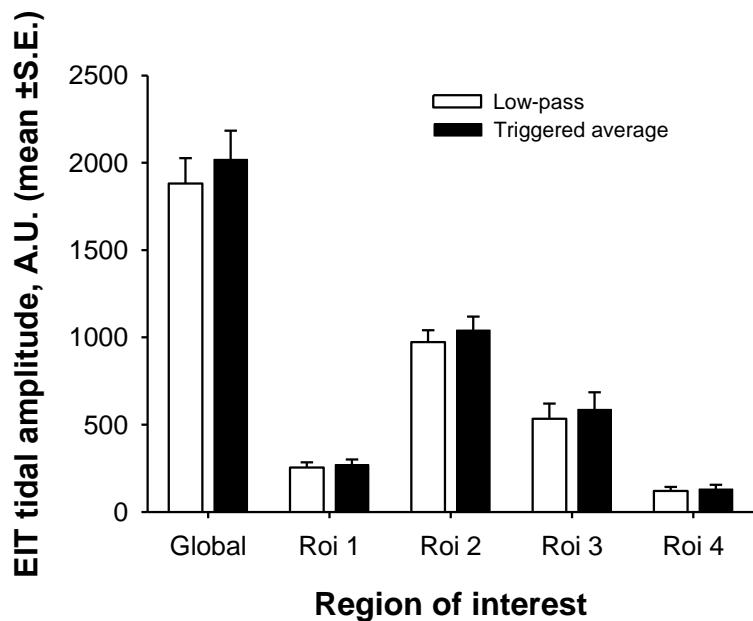

Fig. S3 EIT tidal variations (expressed in arbitrary units, A.U.) of the global EIT signal and the 4 ROIs event triggered averaging were higher than low-pass filtering (all $p < 0.05$)
