**Figure S1. Surface morphology** of 600  $\mu\text{m}$  thick Al substrate measured using interferometer. The surface of the substrate comprises of groove patterns, where the average width between two grooves is about  $24.9 \pm 7.8 \mu\text{m}$ .

**Figure S2. Deformation of 1  $\mu\text{L}$  droplet during the movement.** Droplet driven by acoustic waves based on (a) ZnO/Al with actuation frequency of 9.56 MHz and an input power of 0.7 W, and (b) ZnO/Si with actuation frequency of 14.5 MHz and an input power of 2.5 W.

**Figure S3. Droplets moving on various tilted flat surfaces.** (A) 1  $\mu\text{L}$  water droplets moving on inclined surface with tilted angle of 16°, 43°, 90° and 180° driven by surface acoustic wave devices with the threshold power. (B) Threshold power to initiate movement and (C) average velocity

(averaged over time) divided by power for 1  $\mu\text{L}$  water droplets on ZnO/Al and ZnO/Si surface acoustic wave devices with tilting varying from  $0^\circ$  to  $180^\circ$ .

**Table S1.** Data of contact angle hysteresis measurements. Static contact angle, advancing contact angle, receding contact angle and contact angle hysteresis for four different surfaces.

Surface type	$\theta_s$	$\theta_{adv}$	$\theta_{rec}$	$\Delta\theta = \theta_{adv} - \theta_{rec}$
ZnO/Al	$98^\circ \pm 10^\circ$	$111^\circ \pm 1^\circ$	$49^\circ \pm 14^\circ$	$63^\circ \pm 15^\circ$
CYTOP/ZnO/Al	$114^\circ \pm 2^\circ$	$114^\circ \pm 1^\circ$	$105^\circ \pm 1^\circ$	$9^\circ \pm 2^\circ$
ZnO/Si	$86^\circ \pm 3^\circ$	$90^\circ \pm 4^\circ$	$27^\circ \pm 4^\circ$	$63^\circ \pm 8^\circ$
CYTOP/ZnO/Si	$122^\circ \pm 2^\circ$	$123^\circ \pm 2^\circ$	$95^\circ \pm 4^\circ$	$28^\circ \pm 6^\circ$

**Movie S1 (separate file).** 0.5  $\mu\text{L}$  droplet moving on a ‘roller coaster’ formed by a curled acoustic wave device on a 200  $\mu\text{m}$  thick Al sheet with an actuation frequency of 13.6 MHz and an input power of 20 W. The frame rate is 30 fps.

**Movie S2 (separate file).** 2  $\mu\text{L}$  droplet moving past a hilly surface on a 200  $\mu\text{m}$  thick Al sheet with an actuation frequency of 6.0 MHz and an input power of 6 W. The frame rate is 30 fps.

**Movie S3 (separate file).** 0.5  $\mu\text{L}$  droplet moving on a twisted surface on a 50  $\mu\text{m}$  thick Al foil with an actuation frequency of 13.1 MHz and an input power of 3 W. The frame rate is 30 fps.
