

**Supplemental Figure 1. BCG and rBCG-LTAK63 induce CD4<sup>+</sup> CD69<sup>+</sup> T cells at 7 days after intraperitoneal immunization.** Immunophenotyping of T lymphocytes from the peritoneal fluid of BALB/c mice 7 days after i.p. immunization with BCG or rBCG-LTAK63 ( $1 \times 10^6$  CFU). The control group received Saline. The results represent one of two independent experiments with similar results ( $n= 4$  animals per group). Statistical significance was determined by one-way ANOVA. Significant differences were observed for indicated groups (\*  $P < 0.05$ ; \*\*  $P < 0.01$ ).
