Letter Details

Dear [Patient Name],

Last year's flu season was severe and we are fast approaching the next flu season. To protect yourself, please come visit us soon to receive your flu vaccine.

The flu vaccine is safe.

While you may have heard that the vaccine does not always work, we know that getting vaccinated is the best way to protect you from getting sick, missing work or school, being hospitalized, or becoming disabled from a flu infection.

Because the flu can spread easily, it's important to get vaccinated before the flu virus arrives. Please get vaccinated to:

- Protect yourself
- Protect those you love, particularly pregnant women, young children, and the elderly.

Please call us to make an appointment or click here to request an appointment online. There are also other locations where you can get vaccinated, such as a pharmacy. Use our vaccine locator to find a site near you.

If you already got your flu vaccine outside of UCLA, please let us know by clicking here. This will allow us to coordinate your care so you receive the best treatment possible from our health system.

Learn more about the flu vaccine and how to protect you and your loved ones at: <https://www.XX>.

Thank you!
XX, MD
