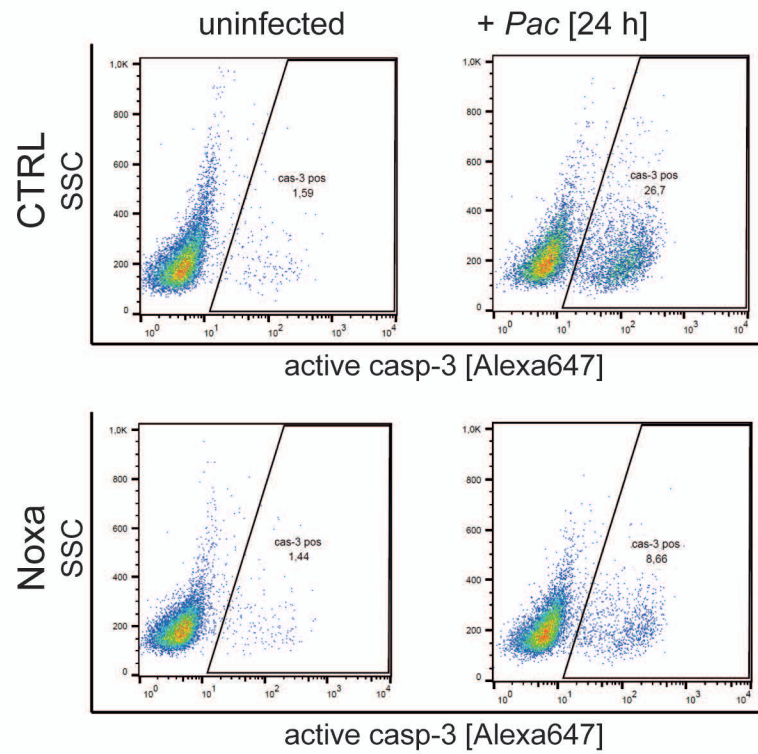

Fig. S2 *Detection of active caspase-3 by flow cytometry.*

HeLa cells of the indicated genotype were infected with *Pac* (MOI=25) and analyzed after 24 h and 48 h for caspase-3 activation by intracellular staining and flow cytometry. **A**, CTRL and Bax/Bak-deficient cells (24 h and 48 h); **B**, CTRL and Bcl-X_L-overexpressing cells (24 h); **C**, CTRL and Noxa-deficient cells (24 h).
