

Supplementary File 1: alignments and information on downstream genes and taxonomy Discovery of 20 novel ribosomal leader candidates in bacteria and archaea

Iris Eckert & Zasha Weinberg

Note: the presentation and explanatory text of this supplementary data on novel RNA motifs follows the pattern of a presentation of previously found conserved RNA motifs (Weinberg, *et al.*, 2010).

23.4 Multiple-sequence alignment	1687

1 L2-Alphaproteobacteria

1.1 Taxa

The taxonomy of each organism containing a putative L2-Alphaproteobacteria RNA is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” might hypothetically represent two distinct RNAs in *E. coli*). The abbreviations will be used to identify each individual L2-Alphaproteobacteria RNA in Sections 1.2 and 1.4:

abbrev. of hits	taxonomy of species
Aat-1-1	Bacteria Proteobacteria Alphaproteobacteria Rhodobacterales Rhodobacteraceae <i>Actibacterium atlanticum</i>
Amu-1-1	Bacteria Proteobacteria Alphaproteobacteria Rhodobacterales Rhodobacteraceae <i>Actibacterium mucosum</i> KCTC 23349
Aat-2-1	Bacteria Proteobacteria Alphaproteobacteria Rhodobacterales Rhodobacteraceae <i>Aestuariivita atlantica</i>
Abo-1-1	Bacteria Proteobacteria Alphaproteobacteria Rhodobacterales Rhodobacteraceae <i>Aestuariivita boseongensis</i>

1.2 Gene contexts

Each L2-Alphaproteobacteria RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L2-Alphaproteobacteria RNA are assigned a color; other domains are gray. Information about these conserved

domains is given in Section 1.3. The accession of the sequence containing each L2-Alphaproteobacteria RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other accession refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L2-Alphaproteobacteria RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 1.1.

1.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 1.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one L2-

Alphaproteobacteria RNA are assigned a color, while others are shown in gray. The number in parentheses after the colored domain name is the number of occurrences in Section 1.2.

cd00719 (1) GIY-YIG nuclease domain superfamily.

cd01658 (4) Ribosomal protein L30, which is found in eukaryotes and prokaryotes but not in archaea, is one of the smallest ribosomal proteins with a molecular mass of about 7kDa.

cd02412 (29) K homology RNA-binding (KH) domain of the prokaryotic 30S small ribosomal subunit protein S3.

cd03886 (1) M20 Peptidase Aminoacylase 1 family.

COG0090 (567) Ribosomal protein L2 [Translation, ribosomal structure and biogenesis]

COG0091 (13) Ribosomal protein L22 [Translation, ribosomal structure and biogenesis]

COG0092 (310) Ribosomal protein S3 [Translation, ribosomal structure and biogenesis]

COG0094 (5) Ribosomal protein L5 [Translation, ribosomal structure and biogenesis]

COG0097 (5) Ribosomal protein L6P/L9E [Translation, ribosomal structure and biogenesis]

COG0098 (4) Ribosomal protein S5 [Translation, ribosomal structure and biogenesis]

COG0185 (365) Ribosomal protein S19 [Translation, ribosomal structure and biogenesis]

COG0186 (1) Ribosomal protein S17 [Translation, ribosomal structure and biogenesis]

COG0197 (289) Ribosomal protein L16/L10AE [Translation, ribosomal structure and biogenesis]

COG0198 (5) Ribosomal protein L24 [Translation, ribosomal structure and biogenesis]

COG0256 (1) Ribosomal protein L18 [Translation, ribosomal structure and biogenesis]

COG0596 (3) Pimeloyl-ACP methyl ester carboxylesterase [Coenzyme transport and metabolism, General function prediction only]

COG1917 (1) Cupin domain protein related to quercetin dioxygenase [General function prediction only]

pfam00181 (107) Ribosomal Proteins L2, RNA binding domain.

pfam00189 (3) Ribosomal protein S3, C-terminal domain.

pfam00203 (7) Ribosomal protein S19.

pfam00237 (339) Ribosomal protein L22p/L17e.

pfam00238 (5) Ribosomal protein L14p/L23e.

pfam00252 (8) Ribosomal protein L16p/L10e.

pfam00253 (5) Ribosomal protein S14p/S29e.

pfam00276 (1) Ribosomal protein L23.

pfam00366 (4) Ribosomal protein S17.

pfam00410 (5) Ribosomal protein S8.

pfam00831 (5) Ribosomal L29 protein.

pfam00861 (4) Ribosomal L18 of archaea, bacteria, mitoch.

pfam03947 (3) Ribosomal Proteins L2, C-terminal domain.

pfam06248 (1) Centromere/kinetochore Zw10.

pfam12697 (3) Alpha/beta hydrolase family.

pfam13759 (4) Putative 2OG-Fe(II) oxygenase.

pfam16867 (1) Dimethylsulfoniopropionate lyase.

smart00322 (5) K homology RNA-binding domain.
smart00465 (1) GIY-YIG type nucleases (URI domain).
TIGR01891 (1) amidohydrolase. [Protein fate, Degradation of proteins, peptides, and glycopeptides]
TIGR02466 (1) conserved hypothetical protein. [Hypothetical proteins, Conserved]

1.4 Multiple-sequence alignment

Each L2-Alphaproteobacteria RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 1.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L2-Alphaproteobacteria RNA itself is denoted by the line underneath marked 5’ and 3’ on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-

Crick or G-U pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%, red circle (◉): nucleotide is present 97% of the time, black circle (◐): 90%, gray circle (◑): 75%, white circle (◒): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Cba-1-1, Gne-1-1, Kvu-2-1, Lca-1-1, Lsp-5-1, Lsp-9-1, Nig-1-1, Nit-1-1, Nit-1-2, Oin-1-1, Pfe-2-1, Rba-5-1, Rca-1-1, Rca-2-1, Rca-3-1, Rca-5-1, Rmo-2-1, Rnu-1-1, Rsp-20-1, Rsp-3-1, Rsp-6-1, Sdo-1-2, Spo-1-1, Ssp-1-1, Ssp-3-1, Tsp-2-1, env-100, env-102, env-107, env-11, env-110, env-111, env-112, env-113, env-114, env-115, env-12, env-123, env-126, env-129, env-130, env-131, env-132, env-133, env-134, env-137, env-140, env-142, env-147, env-152, env-153, env-154, env-159, env-160, env-161, env-180, env-181, env-182, env-183, env-184, env-185, env-198, env-199, env-208, env-209, env-210, env-211, env-212, env-238, env-239, env-240, env-241, env-242, env-243, env-244, env-245, env-246, env-249, env-250, env-251, env-253, env-267, env-268, env-270, env-28, env-281, env-283, env-29, env-292, env-294, env-30, env-302, env-303, env-304, env-305, env-306, env-307, env-31, env-318, env-32, env-328, env-33, env-333, env-334, env-34, env-348, env-349, env-350, env-351, env-352, env-353, env-354, env-355, env-366, env-368, env-376, env-377, env-383, env-384, env-385, env-387, env-390, env-393, env-401, env-406, env-408, env-409, env-410, env-411, env-412, env-415, env-420, env-424, env-425, env-44, env-442, env-443, env-444, env-446, env-449, env-45, env-450, env-451, env-452, env-453, env-454, env-455, env-456, env-457, env-46, env-461, env-462, env-466, env-468, env-470, env-471, env-474, env-478, env-479, env-48, env-480, env-481, env-485, env-486, env-487, env-488, env-489, env-490, env-491, env-492, env-496, env-498, env-499, env-501, env-504, env-509, env-510, env-511, env-529, env-53, env-532, env-535, env-537, env-538, env-539, env-54, env-540, env-541, env-542, env-543, env-544, env-545, env-547, env-550, env-551, env-552, env-553, env-554, env-555, env-556, env-557, env-558, env-559, env-560, env-561, env-562, env-563, env-564, env-565, env-566, env-568, env-569, env-570, env-571, env-572, env-573, env-574, env-575, env-577, env-578, env-58, env-580, env-581, env-584, env-585, env-586, env-587, env-588, env-589, env-593, env-594, env-599, env-601, env-602, env-603, env-604, env-607, env-608, env-609, env-61, env-610, env-619, env-62, env-620, env-621, env-622, env-63, env-642, env-654, env-655, env-73, env-80, env-81, env-82, env-87, env-95

env-1 to env-513						environmental samples

2.2 Gene contexts

Each L4-Archaeoglobi RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L4-Archaeoglobi RNA are assigned a color; other domains are gray. Information about these conserved

domains is given in Section 2.3. The accession of the sequence containing each L4-Archaeoglobi RNA is given in the column named “Seq. accession”. Accessions beginning with “NC-”, “NS-”, “NW-” or “NZ-” are contained in RefSeq. Other accessions refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L4-Archaeoglobi RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 2.1.

2.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 2.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one

cd00141 (6) Nucleotidyltransferase (NT) domain of family X DNA Polymerases. [D/E]
cd00165 (46) S4/Hsp/ tRNA synthetase RNA-binding domain; The domain surface is populated by conserved, charged residues that define a likely RNA-binding site; Found in stress proteins, ribosomal proteins and tRNA synthetases; This may imply a hitherto unrecognized functional similarity between these three protein classes.
cd00355 (1) Ribosomal protein L30, which is found in eukaryotes and prokaryotes but not in archaea, is one of the smallest ribosomal proteins with a molecular mass of about 7kDa.
cd00497 (22) Ribosomal L29 protein/HIP.
cd00513 (12) Ribosomal.L32.L32e: L32 is a protein from the large subunit that contains a surface-exposed globular domain and a finger-like projection that extends into the RNA core to stabilize the tertiary structure.
cd01428 (2) Adenylate kinase (ADK) catalyzes the reversible phosphoryl transfer from adenosine triphosphates (ATP) to adenosine monophosphates (AMP) and to yield adenosine diphosphates (ADP).
cd01513 (1) Domain III of Elongation factor (EF) Tu (EF-TU) and related proteins.
cd01657 (30) Ribosomal protein L7, which is found in archaea and eukaryotes but not in prokaryotes, binds domain II of the 23S rRNA as well as the 5S rRNA and is one of five ribosomal proteins that mediate the interactions 5S rRNA makes with the ribosome.
cd01781 (1) Ubiquitin domain of AT-6, second repeat.
cd02034 (1) The accessory protein CooC, which contains a nucleotide-binding domain (P-loop)

L4-Archaeoglobi RNA are assigned a color, while others are shown in gray. The number in parentheses after the colored domain name is the number of occurrences in Section 2.2.

near the N-terminus, participates in the maturation of the nickel center of carbon monoxide dehydrogenase (CODH).
cd02411 (7) K homology RNA-binding domain (KH) of the archaeal 30S small ribosomal subunit S3 protein.
cd02572 (2) Pseudouridine synthase, human dyskerin like.
cd03586 (1) DNA Polymerase IV/Kappa.
cd03694 (1) Domain II of the GTPBP family of GTP binding proteins.
cd06087 (219) KOW motif of Ribosomal Protein S4 (RPS4).
cd06089 (159) KOW motif of Ribosomal Protein L26.
cd07713 (1) Methanocaldococcus jannaschii dihydropteroate synthase, Thermoanaerobacter tengcongensis Tflp, and related proteins; MBL-fold metallo hydrolase domain.
cd12183 (4) Saccharopine Dehydrogenase NAD-binding and catalytic domains.
cd16490 (1) RING-CH finger, H2 subclass (C4HC3-type), found in Fanconi anemia group L protein (FANCL) and similar proteins.
COG0087 (255) Ribosomal protein L3 [Translation, ribosomal structure and biogenesis]
COG0088 (321) Ribosomal protein L4 [Translation, ribosomal structure and biogenesis]
COG0089 (310) Ribosomal protein L23 [Translation, ribosomal structure and biogenesis]
COG0090 (299) Ribosomal protein L2 [Translation, ribosomal structure and biogenesis]
COG0091 (269) Ribosomal protein L22 [Translation, ribosomal structure and biogenesis]
COG0092 (256) Ribosomal protein S3 [Translation, ribosomal structure and biogenesis]
COG0094 (188) Ribosomal protein L5 [Translation, ribosomal structure and biogenesis]

- COG0096** (210) Ribosomal protein S8 [Translation, ribosomal structure and biogenesis]
COG0097 (208) Ribosomal protein L6P/L9E [Translation, ribosomal structure and biogenesis]
COG0098 (59) Ribosomal protein S5 [Translation, ribosomal structure and biogenesis]
COG0185 (256) Ribosomal protein S19 [Translation, ribosomal structure and biogenesis]
COG0186 (242) Ribosomal protein S17 [Translation, ribosomal structure and biogenesis]
COG0198 (75) Ribosomal protein L24 [Translation, ribosomal structure and biogenesis]
COG0199 (213) Ribosomal protein S14 [Translation, ribosomal structure and biogenesis]
COG0200 (2) Ribosomal protein L15 [Translation, ribosomal structure and biogenesis]
COG0201 (25) Preprotein translocase subunit SecY [Intracellular trafficking, secretion, and vesicular transport]
COG0255 (60) Ribosomal protein L29 [Translation, ribosomal structure and biogenesis]
COG0256 (85) Ribosomal protein L18 [Translation, ribosomal structure and biogenesis]
COG0272 (4) NAD-dependent DNA ligase [Replication, recombination and repair]
COG0322 (25) Excinuclease UvrABC, nuclease subunit [Replication, recombination and repair]
COG0468 (99) RecA/RadA recombinase [Replication, recombination and repair]
COG1102 (4) Cytidylate kinase [Nucleotide transport and metabolism]
COG1222 (3) Uncharacterized archaeal membrane protein, DUF106 family, distantly related to YidC/Oxa1 [Function unknown]
COG1271 (2) Ribosomal protein S4E [Translation, ribosomal structure and biogenesis]
COG1555 (1) DNA uptake protein ComE and related DNA-binding proteins [Replication, recombination and repair]
COG1588 (34) RNase P/RNase MRP subunit p29 [Translation, ribosomal structure and biogenesis]
COG1717 (131) Ribosomal protein L32E [Translation, ribosomal structure and biogenesis]
COG1841 (1) Ribosomal protein L30/L7E [Translation, ribosomal structure and biogenesis]
COG2019 (2) Archaeal adenylate kinase [Nucleotide transport and metabolism]
COG2106 (89) Predicted RNA methylase MTH1, SPOUT superfamily [General function prediction only]
COG2251 (4) Predicted nuclease, RecB family [General function prediction only]
COG5271 (1) Midasin, AAA ATPase with vWA domain, involved in ribosome maturation [Translation, ribosomal structure and biogenesis]
pfam00181 (5) Ribosomal Proteins L2, RNA binding domain.
pfam00189 (3) Ribosomal protein S3, C-terminal domain.
pfam00203 (23) Ribosomal protein S19.
pfam00237 (3) Ribosomal protein L22p/L17e.
pfam00238 (239) Ribosomal protein L14p/L23e.
pfam00276 (4) Ribosomal protein L23.
pfam00281 (36) Ribosomal protein L5.
pfam00297 (180) Ribosomal protein L3.
pfam00347 (4) Ribosomal protein L6.
pfam00366 (3) Ribosomal protein S17.
pfam00410 (2) Ribosomal protein S8.
pfam00573 (16) Ribosomal protein L4/L1 family.
pfam00633 (2) Helix-hairpin-helix motif.
pfam00673 (35) ribosomal L5P family C-terminus.
pfam00828 (25) Ribosomal proteins 50S-L15, 50S-L18e, 60S-L27A.
pfam00831 (172) Ribosomal L29 protein.
pfam00900 (227) Ribosomal family S4e.
pfam01280 (169) Ribosomal protein L19e.
pfam01472 (2) PUA domain.
pfam01479 (47) S4 domain.
pfam01655 (63) Ribosomal protein L32.
pfam01868 (219) Domain of unknown function UPF0086.
pfam01956 (2) Integral membrane protein DUF106.
pfam02598 (347) Putative RNA methyltransferase.
pfam03947 (12) Ribosomal Proteins L2, C-terminal domain.
pfam04147 (1) Nop14-like family.
pfam09547 (1) Stage IV sporulation protein A (spore_IV_A).
pfam10559 (1) Plug domain of Sec61p.
pfam12226 (1) Turkey astrovirus capsid protein.
pfam14520 (61) Helix-hairpin-helix domain.
pfam15250 (1) Raftlin.
PHA03252 (1) DNA packaging tegument protein UL25; Provisional
PRK00279 (2) adenylate kinase; Reviewed
PRK01191 (235) 50S ribosomal protein L24P; Validated
PRK02201 (1) putative inner membrane protein translocase component YidC; Provisional
PRK03879 (253) ribonuclease P protein component 1; Validated
PRK04034 (214) 30S ribosomal protein S8P; Reviewed
PRK04038 (284) 30S ribosomal protein S19P; Provisional

smart00322 (6) K homology RNA-binding domain.
smart00382 (1) ATPases associated with a variety of cellular activities.

smart00739 (2) KOW (Kyprides, Ouzounis, Woese) motif.
smart00849 (1) Metallo-beta-lactamase superfamily.
TIGR01393 (1) elongation factor 4. [Unknown function, General]
TIGR02903 (1) ATP-dependent protease, Lon family. [Protein fate, Degradation of proteins, peptides, and glycopeptides, Cellular processes, Sporulation and germination]
TIGR03594 (1) ribosome-associated GTPase EngA. [Protein synthesis, Other]

TIGR03636 (2) ribosomal protein uL23, archaeal form. [Protein synthesis, Ribosomal proteins: synthesis and modification]
TIGR03653 (3) ribosomal protein uL6, archaeal form. [Protein synthesis, Ribosomal proteins: synthesis and modification]

2.4 Multiple-sequence alignment

Each L4-Archaeoglobi RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 2.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L4-Archaeoglobi RNA itself is denoted by the line underneath marked 5’ and 3’ on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-Crick or G-U

pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%, red circle (◉): nucleotide is present 97% of the time, black circle (◐): 90%, gray circle (◑): 75%, white circle (○): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Hdi-2-1, Hgi-2-1, Hha-1-2, Hhi-1-1, Hje-2-1, Hla-1-2, Hla-3-1, Hma-1-1, Hme-1-2, Hpa-1-2, Hsa-3-1, Hsi-1-1, Hsp-1-1, Hsp-4-1, Hsp-5-1, Hte-2-1, Hvo-1-1, Hwa-2-1, Mco-2-1, Mhu-1-1, Nal-1-1, Nsp-1-1, env-100, env-111, env-112, env-12, env-121, env-124, env-125, env-132, env-133, env-141, env-142, env-143, env-144, env-16, env-162, env-163, env-168, env-171, env-177, env-18, env-19, env-192, env-194, env-195, env-20, env-200, env-202, env-205, env-208, env-21, env-211, env-212, env-213, env-22, env-229, env-230, env-234, env-235, env-236, env-239, env-26, env-262, env-263, env-264, env-267, env-273, env-276, env-279, env-280, env-281, env-282, env-283, env-284, env-285, env-286, env-287, env-288, env-289, env-290, env-291, env-294, env-299, env-300, env-301, env-302, env-307, env-308, env-309, env-311, env-312, env-313, env-314, env-319, env-327, env-328, env-329, env-330, env-336, env-342, env-343, env-344, env-345, env-346, env-347, env-348, env-362, env-363, env-364, env-365, env-366, env-367, env-368, env-369, env-388, env-391, env-393, env-394, env-396, env-397, env-398, env-401, env-404, env-411, env-412, env-417, env-419, env-42, env-420, env-421, env-422, env-424, env-426, env-427, env-431, env-432, env-438, env-447, env-453, env-454, env-457, env-458, env-459, env-46, env-461, env-463, env-47, env-470, env-473, env-48, env-487, env-488, env-489, env-490, env-491, env-493, env-494, env-496, env-497, env-498, env-499, env-500, env-501, env-502, env-503, env-506, env-507, env-51, env-510, env-513, env-52, env-53, env-60, env-61, env-66, env-67, env-68, env-69, env-7, env-73, env-75, env-85, env-9, env-97, har-1-1

3 L13-Bacteroidia

3.1 Taxa

The taxonomy of each organism containing a putative L13-Bacteroidia RNA is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” might hypothetically represent two distinct RNAs in *E. coli*). The abbreviations will be used to identify each individual L13-Bacteroidia RNA in Sections 3.2 and 3.4:

abbrev. of hits	taxonomy of species
Bsp-1-1	Bacteria Bacteroidetes Bacteroidia Bacteroidales Bacteroidaceae <i>Bacteroides</i> sp. Ga6A1

env-1 to env-1259	environmental samples					

3.2 Gene contexts

Each L13-Bacteroidia RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is

indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L13-Bacteroidia RNA are assigned a color; other domains are gray. Information about these conserved domains is given in Section 3.3. The accession of the sequence containing each L13-Bacteroidia RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other

accession refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L13-Bacteroidia RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 3.1.

3.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 3.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one

cd00392 (6) Ribosomal protein L13.
cd14275 (1) UBA domain found in elongation factor Ts (EF-Ts) from bacteria, chloroplasts and mitochondria of eukaryotes.
CHL00079 (3) ribosomal protein S9
COG0102 (26) Ribosomal protein L13 [Translation, ribosomal structure and biogenesis]
pfam00318 (2) Ribosomal protein S2.
pfam00380 (712) Ribosomal protein S9/S16.

3.4 Multiple-sequence alignment

Each L13-Bacteroidia RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 3.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L13-Bacteroidia RNA itself is denoted by the line underneath marked 5’ and 3’ on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-Crick or G-U pairs. Oth-

L13-Bacteroidia RNA are assigned a color, while others are shown in gray. The number in parentheses after the colored domain name is the number of occurrences in Section 3.2.

pfam00572 (955) Ribosomal protein L13.
pfam00889 (1) Elongation factor TS.
PRK00132 (715) 30S ribosomal protein S9; Reviewed
PRK05299 (2) 30S ribosomal protein S2; Provisional
PRK09216 (990) 50S ribosomal protein L13; Reviewed
PRK09377 (1) elongation factor Ts; Provisional

erwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%, red circle (◐): nucleotide is present 97% of the time, black circle (◑): 90%, gray circle (◒): 75%, white circle (◓): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Bsp-1-1, Pal-1-2, Pam-2-1, Pam-4-1, Pba-1-2, Pbi-2-1, Pbi-3-1, Pbi-4-1, Pbi-5-1, Pbi-6-1, Pbr-4-1, Pbu-6-1, Pcl-1-1, Pco-1-1, Pco-3-2, Pde-5-2, Phi-1-1, Pin-2-1, Plo-1-1, Pma-2-1, Pma-5-1, Pme-1-1, Pme-2-1, Pmi-1-1, Pmi-2-1, Pmi-3-1, Pna-1-1, 4 eL15-Euryarchaeota

4.1 Taxa

The taxonomy of each organism containing a putative eL15-Euryarchaeota RNA is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” might hypothetically represent two distinct RNAs in *E. coli*). The abbreviations will be used to identify each individual eL15-Euryarchaeota RNA in Sections 4.2 and 4.4:.

abbrev. of hits

taxonomy of species

har-1-1	halophilic archaeon DL31	Archaea
ume-1-1	Archaea Euryarchaeota	environmental samples uncultured methanogenic archaeon RC-I
h3A-1-1	Archaea Euryarchaeota	Halobacteria Halobacteriales haloarchaeon 3A1_DGR
Hsa-1-1	Archaea Euryarchaeota	Halobacteria Halobacteriales Haloarculaceae <i>Halapricum salinum</i>
Hsp-1-1	Archaea Euryarchaeota	Halobacteria Halobacteriales Haloarculaceae <i>Haloarcula sp.</i> CBA1115
CHa-1-1	Archaea Euryarchaeota	Halobacteria Halobacteriales Halobacteriaceae <i>Candidatus Halobonum tyrrellensis</i> G22
Hci-1-1	Archaea Euryarchaeota	Halobacteria Halobacteriales Halobacteriaceae <i>Haladaptatus cibarius</i> D43
Hpa-1-1 to Hpa-1-2	Archaea Euryarchaeota	Halobacteria Halobacteriales Halobacteriaceae <i>Haladaptatus paucihalophilus</i> DX253
Hje-1-1	Archaea Euryarchaeota	Halobacteria Halobacteriales Halobacteriaceae <i>Halalkalicoccus jeotgali</i> B3

4.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 4.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one eL15-

- cd00075 (1) Histidine kinase-like ATPases; This family includes several ATP-binding proteins for example: histidine kinase, DNA gyrase B, topoisomerases, heat shock protein HSP90, phytochrome-like ATPases and DNA mismatch repair proteins
- cd00267 (1) ATP-binding cassette transporter nucleotide-binding domain.
- cd00293 (4) Usp: Universal stress protein family.
- cd00757 (26) ThiF_MoeB_HesA.
- cd01066 (1) A family including aminopeptidase P, aminopeptidase M, and prolidase.
- cd01088 (1) Methionine Aminopeptidase 2.
- cd01911 (1) proteasome alpha subunit.
- cd02153 (2) The tRNA binding domain is also known as the Myf domain in literature.
- cd03024 (2) DsbA family, FrnE subfamily; FrnE is a DsbA-like protein containing a CXXX motif.
- cd03756 (76) proteasome_alpha_archaeal.
- cd06067 (3) Endopeptidases belonging to membrane-bound hydrogen evolving hydrogenase group. [NiFe]
- cd11365 (19) RRP42 subunit of archaeal exosome.
- cd11366 (19) RRP41 subunit of archaeal exosome.
- cd11386 (1) Methyl-accepting chemotaxis protein (MCP), signaling domain.
- COG0249 (3) DNA mismatch repair ATPase MutS [Replication, recombination and repair]
- COG0317 (1) (p)ppGpp synthase/hydrolase, HD superfamily [Signal transduction mechanisms, Transcription]
- COG0323 (1) DNA mismatch repair ATPase MutL [Replication, recombination and repair]
- COG0599 (7) Uncharacterized conserved protein YurZ, alkylhydroperoxidase/carboxymuconolactone decarboxylase family [General function prediction only]
- COG0638 (2) 20S proteasome, alpha and beta subunits [Posttranslational modification, protein turnover, chaperones]
- COG0840 (5) Methyl-accepting chemotaxis protein [Cell motility, Signal transduction mechanisms]
- COG0864 (3) Metal-responsive transcriptional regulator, contains CopG/Arc/MetJ DNA-binding domain [Transcription]
- COG1097 (19) Exosome complex RNA-binding protein Rrp4, contains S1 and KH domains [Translation, ribosomal structure and biogenesis]
- COG1145 (1) Ferredoxin [Energy production and conversion]
- COG1146 (6) NAD-dependent dihydropyrimidine dehydrogenase, PreA subunit [Nucleotide transport and metabolism]
- COG1215 (1) Glycosyltransferase, catalytic subunit of cellulose synthase and poly-beta-1,6-N-acetylglucosamine synthase [Cell motility]
- COG1325 (106) Exosome subunit, RNA binding protein with dsRBD fold [Translation, ribosomal structure and biogenesis]
- COG1369 (108) RNase P/RNase MRP subunit POP5 [Translation, ribosomal structure and biogenesis]
- COG1382 (10) Prefoldin, chaperonin cofactor [Posttranslational modification, protein turnover, chaperones]
- COG1500 (76) Ribosome maturation protein Sdo1 [Translation, ribosomal structure and biogenesis]
- COG1541 (2) Phenylacetate-coenzyme A ligase PaaK, adenylate-forming domain family [Coenzyme transport and metabolism]
- COG1603 (223) RNase P/RNase MRP subunit p30 [Translation, ribosomal structure and biogenesis]
- COG1632 (147) Ribosomal protein L15E [Translation, ribosomal structure and biogenesis]
- COG1721 (2) Redox-sensitive bicupin YhaK, pirin superfamily [General function prediction only]
- COG1996 (35) DNA-directed RNA polymerase, subunit RPC12/RpoP, contains C4-type Zn-finger [Transcription]
- COG1997 (1) Ribosomal protein L37AE/L43A [Translation, ribosomal structure and biogenesis]
- COG2456 (11) rRNA maturation protein Rpf1, contains Brix/IMP4 (anticodon-binding) domain [Translation, ribosomal structure and biogenesis]
- COG2761 (6) Predicted dithiol-disulfide isomerase, DsbA family [Posttranslational modification, protein turnover, chaperones]
- COG2892 (25) tRNA threonylcarbamoyladenosine modification (KEOPS) complex, Pcc1 subunit [Translation, ribosomal structure and biogenesis]
- COG3153 (1) Predicted N-acetyltransferase YhbS [General function prediction only]
- COG3609 (6) Transcriptional regulator, contains Arc/MetJ-type RHH (ribbon-helix-helix) DNA-binding domain [Transcription]
- COG4352 (80) Ribosomal protein L13E [Translation, ribosomal structure and biogenesis]
- COG4585 (1) Signal transduction histidine kinase [Signal transduction mechanisms]
- pfam00672 (6) HAMP domain.
- pfam00827 (780) Ribosomal L15.
- pfam01119 (1) DNA mismatch repair protein, C-terminal domain.
- pfam01172 (1) Shwachman-Bodian-Diamond syndrome (SBDS) protein.
- pfam01226 (1) Formate/nitrite transporter.
- pfam01294 (1) Ribosomal protein L13e.
- pfam01368 (2) DHH family.
- pfam01451 (1) Low molecular weight phosphotyrosine protein phosphatase.
- pfam01595 (1) Domain of unknown function DUF21.
- pfam01624 (1) MutS domain I.
- pfam01780 (58) Ribosomal L37ae protein family.
- pfam01876 (70) RNase P subunit p30.
- pfam01877 (163) RNA binding.
- pfam01900 (136) Rpp14/Pop5 family.
- pfam01920 (6) Prefoldin subunit.
- pfam02592 (6) Putative vitamin uptake transporter.
- pfam02771 (1) Acyl-CoA dehydrogenase, N-terminal domain.
- pfam04087 (1) Domain of unknown function (DUF389).
- pfam05048 (3) Periplasmic copper-binding protein (NosD).

- pfam05639** (1) Pup-like protein. [EQ]
pfam06736 (3) Protein of unknown function (DUF1211).
pfam07705 (3) CARDB.
pfam08676 (1) MutL C terminal dimerisation domain.
pfam08753 (3) NikR C terminal nickel binding domain.
pfam09341 (23) Transcription factor Pcc1.
pfam09377 (1) SBDS protein C-terminal domain.
pfam12838 (5) 4Fe-4S dicluster domain.
pfam13187 (1) 4Fe-4S dicluster domain.
pfam13229 (3) Right handed beta helix region.
pfam13370 (1) 4Fe-4S single cluster domain of Ferredoxin I. [4Fe-4S]
pfam13462 (8) Thioredoxin.
pfam13508 (1) Acetyltransferase (GNAT) domain.
pfam14535 (2) AMP-binding enzyme C-terminal domain.
pfam16116 (3) Domain of unknown function (DUF4832).
PRK00095 (1) DNA mismatch repair protein; Reviewed
PRK00398 (35) DNA-directed RNA polymerase subunit P; Provisional
PRK00912 (296) ribonuclease P protein component 3; Provisional
PRK00933 (11) ribosomal biogenesis protein; Validated
PRK03717 (241) ribonuclease P protein component 2; Provisional
PRK03892 (2) ribonuclease P protein component 3; Provisional
PRK03973 (59) 50S ribosomal protein L37Ae; Reviewed
PRK03983 (19) exosome complex exonuclease Rrp41; Provisional
PRK03996 (77) proteasome subunit alpha; Provisional
PRK04163 (19) exosome complex RNA-binding protein Rrp4; Provisional
PRK04243 (927) 50S ribosomal protein L15e; Validated
PRK04282 (19) exosome complex RNA-binding protein Rrp42; Provisional
PRK04460 (6) nickel responsive regulator; Provisional
PRK05399 (1) DNA mismatch repair protein MutS; Provisional
PRK05427 (1) putative manganese-dependent inorganic pyrophosphatase; Provisional
PRK05658 (1) RNA polymerase sigma factor RpoD; Validated
PRK08671 (2) methionine aminopeptidase; Provisional
PRK08762 (10) molybdopterin biosynthesis protein MoeB; Validated
PRK09343 (3) prefoldin subunit beta; Provisional
PRK10089 (2) tRNA-binding protein; Provisional
PRK10935 (2) nitrate/nitrite sensor protein NarQ; Provisional
PRK12277 (81) 50S ribosomal protein L13e; Provisional
PRK13760 (76) putative RNA-associated protein; Provisional
PRK14538 (1) putative bifunctional signaling protein/50S ribosomal protein L9; Provisional
PRK14555 (267) hypothetical protein; Provisional
PRK14887 (2) KEOPS complex Pcc1-like subunit; Provisional
PRK14960 (3) DNA polymerase III subunits gamma and tau; Provisional
PRK15005 (4) universal stress protein F; Provisional
smart00283 (6) Methyl-accepting chemotaxis-like domains (chemotaxis sensory transducer).
smart00382 (1) ATPases associated with a variety of cellular activities.
smart00387 (1) Histidine kinase-like ATPases.
smart00533 (2) DNA-binding domain of DNA mismatch repair MUTS family.
smart00534 (2) ATPase domain of DNA mismatch repair MUTS family.
smart00579 (3) The Brix domain is found in a number of eukaryotic proteins.
smart00948 (2) Proteasome subunit A N-terminal signature Add an annotation.
TIGR00072 (3) hydrogenase maturation protease.
TIGR00341 (1) TIGR00341 family protein. [Hypothetical proteins, Conserved]
TIGR00691 (1) (p)ppGpp synthetase, RelA/SpoT family. [Cellular processes, Adaptations to atypical conditions]
TIGR00697 (6) conserved hypothetical integral membrane protein. [Hypothetical proteins, Conserved]
TIGR02338 (13) prefoldin, beta subunit, archaeal.
TIGR02356 (16) thiazole biosynthesis adenylyltransferase ThiF, E. [Biosynthesis of cofactors, prosthetic groups, and carriers, Thiamine]
TIGR02689 (1) arsenate reductase, glutathione/glutaredoxin type. [Cellular processes, Detoxification]
TIGR03520 (1) gliding motility-associated protein GldE.
TIGR04283 (1) transferase 2, rSAM/selenodomain-associated. [Unknown function, Enzymes of unknown specificity]

4.4 Multiple-sequence alignment

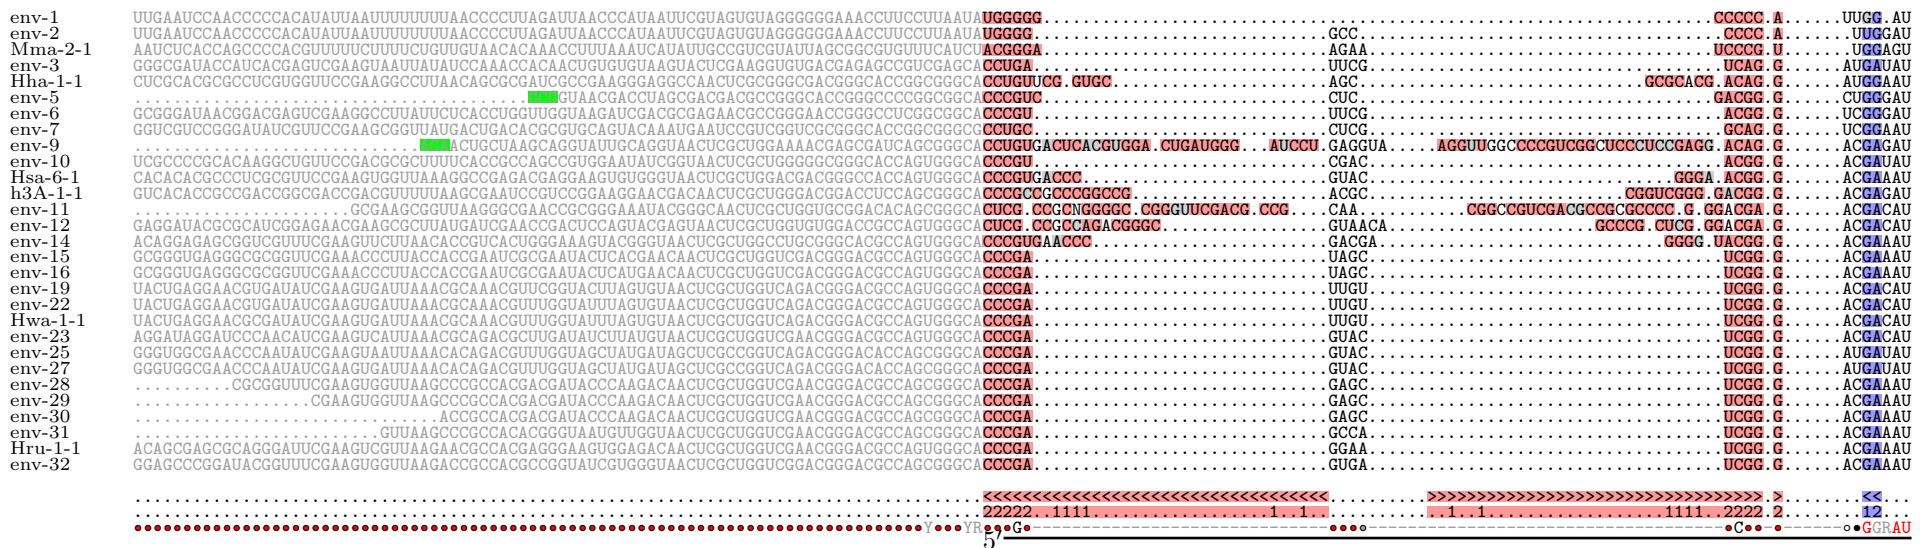

Each eL15-Euryarchaeota RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 4.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The eL15-Euryarchaeota RNA itself is denoted by the line underneath marked 5' and 3' on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, espe-

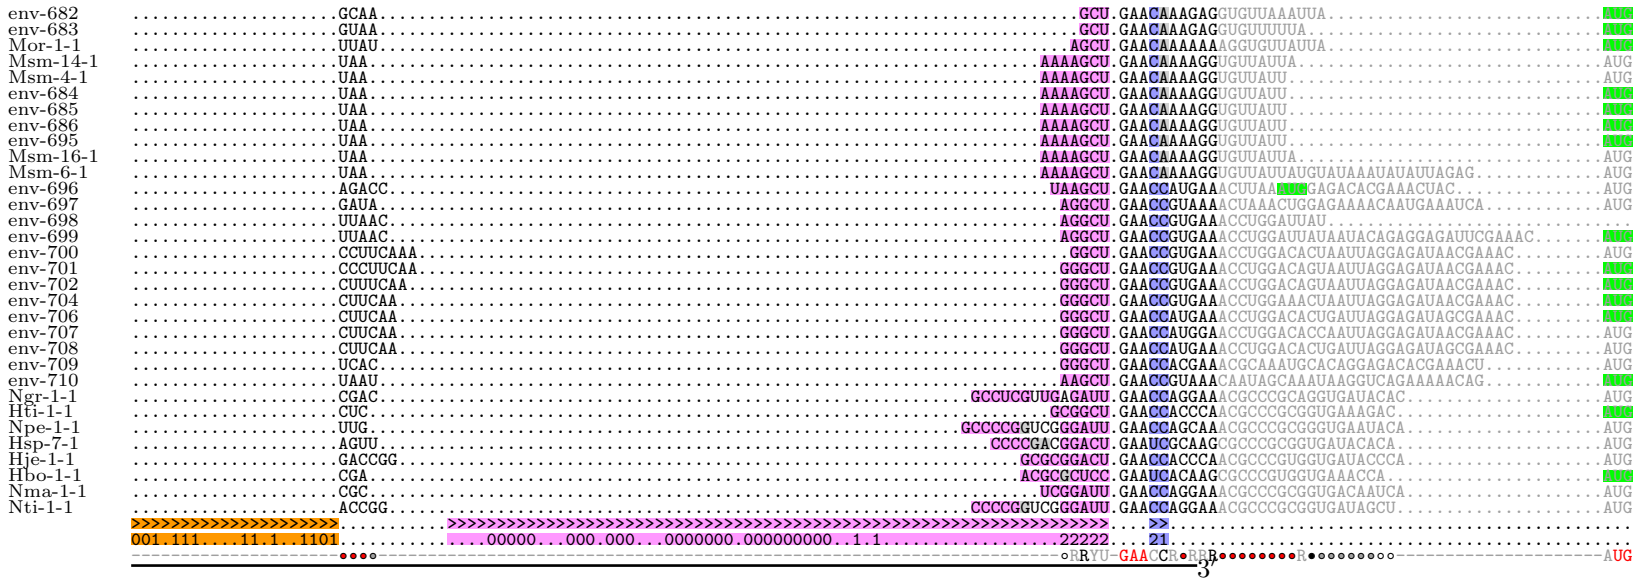

cially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-Crick or G-U pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%,

red circle (◉): nucleotide is present 97% of the time, black circle (◐): 90%, gray circle (◑): 97% conserved) assume that sequences have been weighted by the GSC algorithm (◉): 75%, white circle (○): 50%. All percentages of sequences just described (e.g. implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Hac-1-2, Hal-1-1, Hdi-1-1, Hdi-2-1, Hez-1-1, Hha-1-2, Hhi-1-1, Hhi-2-1, Hla-1-2, Hla-3-1, Hlu-1-1, Hme-1-2, Hpa-1-2, Hsa-3-1, Hsp-1-1, Hsp-4-1, Hsp-5-1, Hte-2-1, Hvo-1-1, Hwa-2-1, Mar-1-1, Mba-1-1, Mba-3-1, Mba-6-1, Mho-1-1, Mhu-1-1, Mma-3-10, Mma-3-11, Mma-3-12, Mma-3-13, Mma-3-14, Mma-3-15, Mma-3-16, Mma-3-17, Mma-3-18, Mma-3-19, Mma-3-2, Mma-3-20, Mma-3-21, Mma-3-22, Mma-3-23, Mma-3-24, Mma-3-25, Mma-3-26, Mma-3-27, Mma-3-28, Mma-3-29, Mma-3-3, Mma-3-30, Mma-3-31, Mma-3-32, Mma-3-33, Mma-3-34, Mma-3-35, Mma-3-36, Mma-3-37, Mma-3-38, Mma-3-39, Mma-3-4, Mma-3-40, Mma-3-41, Mma-3-42, Mma-3-43, Mma-3-44, Mma-3-45, Mma-3-46, Mma-3-47, Mma-3-48, Mma-3-49, Mma-3-5, Mma-3-50, Mma-3-51, Mma-3-52, Mma-3-53, Mma-3-54, Mma-3-55, Mma-3-56, Mma-3-6, Mma-3-7, Mma-3-8, Mma-3-9, Mma-4-1, Mma-5-1, Mma-6-1, Mma-7-1, Mma-8-1, Mma-9-1, Msm-1-1, Msm-10-1, Msm-11-1, Msm-12-1, Msm-13-1, Msm-15-1, Msm-17-1, Msm-18-1, Msm-19-1, Msm-2-1, Msm-20-1, Msm-21-1, Msm-22-1, Msm-23-1, Msm-3-1, Msm-5-1, Msm-7-1, Msm-8-1, Msm-9-1, Msp-10-1, Msp-11-1, Msp-12-1, Msp-15-1, Msp-6-1, Msp-8-1, Msp-9-1, Nal-1-1, Nsp-1-1, Nsp-2-1, Pfu-1-1, env-100, env-103, env-106, env-107, env-108, env-109, env-111, env-113, env-118, env-120, env-123, env-124, env-127, env-128, env-13, env-131, env-132, env-133, env-134, env-143, env-150, env-151, env-154, env-155, env-157, env-163, env-165, env-166, env-167, env-168, env-17, env-171, env-18, env-190, env-191, env-198, env-20, env-200, env-204, env-205, env-209, env-21, env-211, env-222, env-225, env-24, env-240, env-241, env-242, env-252, env-257, env-258, env-259, env-26, env-260, env-261, env-263, env-264, env-265, env-272, env-275, env-279, env-280, env-282, env-285, env-288, env-292, env-294, env-300, env-303, env-305, env-306, env-307, env-313, env-314, env-315, env-316, env-320, env-335, env-337, env-340, env-342, env-343, env-345, env-346, env-347, env-350, env-351, env-352, env-355, env-357, env-36, env-361, env-368, env-37, env-372, env-373, env-374, env-38, env-389, env-391, env-393, env-394, env-395, env-396, env-397, env-398, env-399, env-4, env-400, env-401, env-403, env-404, env-405, env-407, env-409, env-41, env-411, env-415, env-417, env-419, env-421, env-423, env-426, env-430, env-431, env-434, env-435, env-436, env-437, env-44, env-445, env-448, env-451, env-452, env-456, env-458, env-459, env-46, env-464, env-468, env-470, env-471, env-478, env-482, env-483, env-493, env-494, env-498, env-501, env-504, env-510, env-518, env-519, env-520, env-521, env-523, env-524, env-526, env-527, env-533, env-54, env-548, env-549, env-550, env-551, env-554, env-555, env-556, env-557, env-558, env-56, env-562, env-566, env-569, env-572, env-573, env-58, env-582, env-583, env-584, env-586, env-59, env-592, env-593, env-60, env-600, env-601, env-614, env-615, env-618, env-62, env-626, env-627, env-632, env-648, env-649, env-652, env-653, env-654, env-655, env-662, env-666, env-667, env-668, env-669, env-677, env-678, env-68, env-687, env-688, env-689, env-69, env-690, env-691, env-692, env-693, env-694, env-703, env-705, env-71, env-711, env-712, env-713, env-72, env-75, env-76, env-8, env-81, env-82, env-85, env-88, env-96, env-97, har-1-1

5 L17-Actino-Proteobacteria

5.1 Taxa

The taxonomy of each organism containing a putative L17-Actino-Proteobacteria RNA is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” might hypothetically represent two distinct RNAs in *E.*

coli). The abbreviations will be used to identify each individual L17-Actino-Proteobacteria RNA in Sections 5.3 and 5.5.

5.2 Notes

Superscript numbers are used to annotate any L17-Actino-Proteobacteria RNA that has special characteristics (described below). These numeric annotations will

¹ Left hairpin does not conform well to the characteristics of those in most other

5.3 Gene contexts

Each L17-Actino-Proteobacteria RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L17-Actino-Proteobacteria RNA are assigned a color; other domains are gray. Information about these conserved domains is given in Section 5.4. The accession of the se-

quences will be used in Sections 5.3 and 5.5. The meaning of the numbers are as follows.

sequences.

quence containing each L17-Actino-Proteobacteria RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other accession refer to environmental samples. Nucleotide coordinates are given for the 5’ and 3’ boundaries of each L17-Actino-Proteobacteria RNA. If the 5’ coordinate is greater than the 3’ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 5.1. (Superscript numbers refer to annotations listed in Section 5.2)

5.4 Conserved domains

Conserved domains found in protein-coding genes listed in Section 5.3 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one L17-Actino-Proteobacteria RNA are assigned a color, while others are shown in gray. The symbols ‘d’ and ‘u’ (if any) to the left of the colored domain name indicate whether the domain occurs upstream or downstream of the RNA motif. Domains marked with lower-case ‘d’ occur (at least once) present downstream

cd01167 (1) Fructokinases (FRKs) mainly from bacteria and plants are enzymes with high specificity for fructose, as are all FRKs, but they catalyzes the conversion of fructose to fructose-6-phosphate, which is an entry point into glycolysis via conversion into glucose-6-phosphate. [or ketohexokinases (KHKs)]

cd02440 (2) S-adenosylmethionine-dependent methyltransferases (SAM or AdoMet-MTase), class I; AdoMet-MTases are enzymes that use S-adenosyl-L-methionine (SAM or AdoMet) as a substrate for methyltransfer, creating the product S-adenosyl-L-homocysteine (AdoHcy).

cd02570 (329) Eukaryotic and bacterial pseudouridine synthases similar to E.

COG0009 (1) tRNA A37 threonylcarbamoyladenosine synthetase subunit TsaC/SUA5/YrdC [Translation, ribosomal structure and biogenesis]

COG0203 (37) Ribosomal protein L17 [Translation, ribosomal structure and biogenesis]

COG0488 (29) ATPase components of ABC transporters with duplicated ATPase domains

of some L17-Actino-Proteobacteria RNA in the opposite orientation. Domains marked with capital ‘D’ occur downstream and in the same orientation (i.e., a potential *cis*-regulatory arrangement). Domains marked with a ‘u’ occur upstream of the RNA in either orientation. If the ‘d’/‘u’ symbols are missing, then the domain is downstream and in the same strand. (This mode is used for motifs predicted as *cis*-regulatory.) The number in parentheses after the colored domain name is the number of occurrences in Section 5.3.

[General function prediction only]

COG0761 (1) 4-Hydroxy-3-methylbut-2-enyl diphosphate reductase IspH [Lipid transport and metabolism]

COG1004 (1) UDP-glucose 6-dehydrogenase [Cell wall/membrane/envelope biogenesis]

pfam01196 (524) Ribosomal protein L17.

pfam01416 (1) tRNA pseudouridine synthase.

pfam02156 (1) Glycosyl hydrolase family 26.

pfam09594 (19) Protein of unknown function (DUF2029).

pfam12848 (1) ABC transporter.

pfam13304 (21) AAA domain, putative AbiEii toxin, Type IV TA system.

pfam13620 (1) Carboxypeptidase regulatory-like domain.

pfam13649 (2) Methyltransferase domain.

PRK00021 (330) tRNA pseudouridine synthase A; Validated

6.2 Gene contexts

Each L19-Flavobacteria RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L19-Flavobacteria RNA are assigned a color; other domains are gray. Information about these con-

served domains is given in Section 6.3. The accession of the sequence containing each L19-Flavobacteria RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other accession refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L19-Flavobacteria RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 6.1.

6.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 6.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one

L19-Flavobacteria RNA are assigned a color, while others are shown in gray. The number in parentheses after the colored domain name is the number of occurrences in Section 6.2.

cd00635 (4) Type III Pyridoxal 5-phosphate (PLP)-Dependent Enzymes, YBL036c-like proteins.
cd00834 (35) Beta-ketoacyl-acyl carrier protein (ACP) synthase (KAS), type I and II.
cd01667 (19) TGS_ThrRS.N: ThrRS (threonyl-tRNA Synthetase) is a class II tRNA synthetase that couples threonine to its cognate tRNA.
cd02968 (7) SCO (an acronym for Synthesis of Cytochrome c Oxidase) family; composed of proteins similar to Sco1, a membrane-anchored protein possessing a soluble domain with a TRX fold.
cd03218 (1) ATP-binding cassette component of YhbG transport system.
cd04690 (18) Members of the Nudix hydrolase superfamily catalyze the hydrolysis of Nucleoside Diphosphates linked to other moieties, X.
cd04795 (1) SIS domain.
cd05007 (36) N-acetylmuramic acid 6-phosphate etherase.
cd05233 (1) classical (c) SDRs. [AG]
cd06127 (38) DEDDh 3'-5' exonuclease domain family.
cd07995 (1) Thiamine pyrophosphokinase.
cd10254 (33) Catalytic GIY-YIG domain of nucleotide excision repair endonucleases UvrC, Cho, and similar proteins.
cd11308 (5) Peptidase associated domain: C-terminal domain of M14 N/E carboxypeptidase; putative folding, regulation, or interaction domain.
COG0030 (5) 16S rRNA A1518 and A1519 N6-dimethyltransferase RsmA/KsgA/DIM1 (may also have DNA glycosylase/AP lyase activity) [Translation, ribosomal structure and biogenesis]
COG0290 (4) Translation initiation factor IF-3 [Translation, ribosomal structure and biogenesis]
COG0336 (2) tRNA G37 N-methylase TrmD [Translation, ribosomal structure and biogenesis]
COG0441 (23) Threonyl-tRNA synthetase [Translation, ribosomal structure and biogenesis]
COG0486 (1) tRNA U34 5-carboxymethylaminomethyl modifying GTPase MnmE/TrmE [Translation, ribosomal structure and biogenesis]
COG0525 (3) Valyl-tRNA synthetase [Translation, ribosomal structure and biogenesis]
COG0538 (76) Isocitrate dehydrogenase [Energy production and conversion]
COG0605 (32) Superoxide dismutase [Inorganic ion transport and metabolism]
COG1159 (1) GTPase Era, involved in 16S rRNA processing [Translation, ribosomal structure and biogenesis]

COG1629 (8) Outer membrane receptor proteins, mostly Fe transport [Inorganic ion transport and metabolism]
COG4389 (1) Site-specific recombinase [Replication, recombination and repair]
COG4799 (1) Acetyl-CoA carboxylase, carboxyltransferase component [Lipid transport and metabolism]
pfam00081 (1) Iron/manganese superoxide dismutases, alpha-hairpin domain.
pfam00106 (1) short chain dehydrogenase.
pfam00453 (4) Ribosomal protein L20.
pfam00593 (12) TonB dependent receptor.
pfam01245 (2085) Ribosomal protein L19.
pfam01632 (4) Ribosomal protein L35.
pfam01850 (5) PIN domain.
pfam01923 (1) Cobalamin adenosyltransferase.
pfam02628 (3) Cytochrome oxidase assembly protein.
pfam02824 (5) TGS domain.
pfam03544 (22) Gram-negative bacterial TonB protein C-terminal.
pfam03971 (8) Monomeric isocitrate dehydrogenase.
pfam06245 (7) Protein of unknown function (DUF1015).
pfam07715 (22) TonB-dependent Receptor Plug Domain.
pfam10136 (1) Site-specific recombinase.
pfam12399 (1) Branched-chain amino acid ATP-binding cassette transporter.
pfam13715 (33) CarboxypepD_reg-like domain.
pfam13723 (27) Beta-ketoacyl synthase, N-terminal domain.
pfam14054 (18) Domain of unknown function (DUF4249).
pfam14213 (5) Domain of unknown function (DUF4325).
pfam14815 (1) NUDIX domain.
pfam14905 (10) Outer membrane protein beta-barrel family.
PLN02820 (1) 3-methylcrotonyl-CoA carboxylase, beta chain
PRK00026 (2) tRNA (guanine-N(1)-methyltransferase; Reviewed
PRK00028 (4) translation initiation factor IF-3; Reviewed
PRK00089 (1) GTPase Era; Reviewed
PRK00172 (4) 50S ribosomal protein L35; Reviewed

PRK13484 (1) putative iron-regulated outer membrane virulence protein; Provisional
PTZ00435 (1) isocitrate dehydrogenase; Provisional
smart00382 (1) ATPases associated with a variety of cellular activities.
smart00465 (18) GIY-YIG type nucleases (URI domain).
smart00479 (38) exonuclease domain in DNA-polymerase alpha and epsilon chain, ribonuclease T and other exonucleases.
smart00863 (1) Threonyl and Alanyl tRNA synthetase second additional domain.
smart00983 (1) Thiamin pyrophosphokinase, vitamin B1 binding domain.
TIGR00044 (4) pyridoxal phosphate enzyme, YggS family. [Unknown function, Enzymes of unknown specificity]
TIGR00178 (8) isocitrate dehydrogenase, NADP-dependent, monomeric type. [Energy metabolism, TCA cycle]
TIGR00636 (1) ATP:cob(I)alamin adenosyltransferase. [Biosynthesis of cofactors, prosthetic

groups, and carriers, Heme, porphyrin, and cobalamin]
TIGR01859 (22) TonB family C-terminal domain. [Transport and binding proteins, Cations and iron carrying compounds]
TIGR01785 (1) TonB-dependent heme/hemoglobin receptor family protein. [Transport and binding proteins, Cations and iron carrying compounds, Transport and binding proteins, Porins]
TIGR01786 (3) TonB-dependent hemoglobin/transferrin/lactoferrin receptor family protein. [Transport and binding proteins, Cations and iron carrying compounds, Transport and binding proteins, Porins]
TIGR03150 (8) beta-ketoacyl-acyl-carrier-protein synthase II. [acyl-carrier-protein] synthase 2 (KAS-II, FabF) is involved in the condensation step of fatty acid biosynthesis in which the malonyl donor group is decarboxylated and the resulting carbanion used to attack and extend the acyl group attached to the acyl carrier protein. Most genomes encoding fatty acid biosynthesis contain a number of condensing enzymes, often of all three types: 1, 2 and 3. Synthase 2 is mechanistically related to synthase 1 (KAS-I, FabB) containing a number of absolutely conserved catalytic residues in common. This model is based primarily on genes which are found in apparent operons with other essential genes of fatty acid biosynthesis (GenProp0681). The large gap between the trusted cutoff and the noise cutoff contains many genes which are not found adjacent to genes of the fatty acid pathway in genomes that often also contain a better hit to this model. These genes may be involved in other processes such as polyketide biosyntheses. Some genomes contain more than one above-trusted hit to this model which may result from recent paralogous expansions. Second hits to this model which are not next to other fatty acid biosynthesis genes may be involved in other processes. FabB sequences should fall well below the noise cutoff of this model. [Fatty acid and phospholipid metabolism, Biosynthesis]

6.4 Multiple-sequence alignment

Each L19-Flavobacteria RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 6.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L19-Flavobacteria RNA itself is denoted by the line underneath marked 5' and 3' on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-Crick or G-U

pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%, red circle (◉): nucleotide is present 97% of the time, black circle (◐): 90%, gray circle (◑): 75%, white circle (◒): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Cat-1-1, Cba-1-1, Cba-2-1, Cba-3-1, Cca-1-2, Cca-1-3, Cgi-1-1, Cgr-1-1, Coc-1-1, Coc-2-1, Coc-4-1, Csp-1-1, Csp-10-1, Csp-11-1, Csp-12-1, Csp-2-1, Csp-3-1, Csp-4-1, Csp-5-1,

7 L20-Deltaproteobacteria

7.1 Taxa

The taxonomy of each organism containing a putative L20-Deltaproteobacteria RNA is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” might hypothetically represent two distinct RNAs in *E. coli*). The abbreviations will be used to identify each individual L20-Deltaproteobacteria RNA in Sections 7.2 and 7.4:.

abbrev. of hits	taxonomy of species
Dac-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Desulfuromonadaceae <i>Desulfuromonas acetoxidans</i> DSM 684
Dsp-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Desulfuromonadaceae <i>Desulfuromonas</i> sp. TF
Pse-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Desulfuromonadaceae <i>Pelobacter seleniigenes</i> DSM 18267
Gfe-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geoalkalibacter ferrihydriticus</i> DSM 17813
Gsu-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geoalkalibacter subterraneus</i>
Gbe-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter bemidjensis</i> Bem
Gbr-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter bremensis</i> R1
Glo-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter lovleyi</i> SZ
Gme-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter metallireducens</i> GS-15
Gme-2-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter metallireducens</i> RCH3
Gpi-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter pickeringii</i>
Gso-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter soli</i>
Gsp-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter</i> sp. FRC-32
Gsp-2-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter</i> sp. M18
Gsp-3-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter</i> sp. M21
Gsp-4-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter</i> sp. OR-1
Gsu-2-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter sulfurreducens</i>
Gsu-3-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter sulfurreducens</i> KN400
Gsu-4-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter sulfurreducens</i> PCA
Gur-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geobacter uraniireducens</i> Rf4
Gel-1-1	Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Geobacteraceae <i>Geopsychrobacter electrophilus</i> DSM 16401

Pca-1-1 Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Pelobacteraceae *Pelobacter carbinolicus* DSM 2380
 Ppr-1-1 Bacteria Proteobacteria Deltaproteobacteria Desulfuromonadales Pelobacteraceae *Pelobacter propionicus* DSM 2379
 env-1 to env-179 environmental samples

7.2 Gene contexts

Each L20-Deltaproteobacteria RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L20-Deltaproteobacteria RNA are assigned a color; other domains are gray. Information about these conserved

domains is given in Section 7.3. The accession of the sequence containing each L20-Deltaproteobacteria RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other accession refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L20-Deltaproteobacteria RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 7.1.

7.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 7.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one L20-

cd00118 (1) Lysine Motif is a small domain involved in binding peptidoglycan.
cd02796 (35) tRNA-binding-domain-containing prokaryotic phenylalanly tRNA synthetase (PheRS) beta chain.
cd04765 (18) Helix-Turn-Helix DNA binding domain of putative MlrA-like transcription regulators.
cd06158 (1) Uncharacterized homologs of Site-2 protease (S2P), zinc metalloproteases (MEROPS family M50) which cleave transmembrane domains of substrate proteins, regulating intramembrane proteolysis (RIP) of diverse signal transduction mechanisms.
cd07026 (1) Ribosomal protein L20.
cd13835 (18) Alpha subunit of integration host factor (IHFA).
CHL00068 (15) ribosomal protein L20
CHL00192 (1) phenylalanyl-tRNA synthetase beta chain; Provisional
COG0016 (48) Phenylalanyl-tRNA synthetase alpha subunit [Translation, ribosomal structure and biogenesis]

Deltaproteobacteria RNA are assigned a color, while others are shown in gray. The number in parentheses after the colored domain name is the number of occurrences in Section 7.2.

COG0072 (35) Phenylalanyl-tRNA synthetase beta subunit [Translation, ribosomal structure and biogenesis]
COG0180 (1) Tryptophanyl-tRNA synthetase [Translation, ribosomal structure and biogenesis]
COG0496 (8) Broad specificity polyphosphatase and 5'/3'-nucleotidase SurE [Replication, recombination and repair]
COG0508 (4) Adenine/guanine phosphoribosyltransferase or related PRPP-binding protein [Nucleotide transport and metabolism]
COG0568 (4) DNA-directed RNA polymerase, sigma subunit (sigma70/sigma32) [Transcription]
COG0739 (2) Murein DD-endopeptidase MepM and murein hydrolase activator NlpD, contain LysM domain [Cell wall/membrane/envelope biogenesis]
COG0789 (1) DNA-binding transcriptional regulator, MerR family [Transcription]
COG1238 (3) Uncharacterized membrane protein YqaA, SNARE-associated domain [Function unknown]
COG1354 (1) Chromatin segregation and condensation protein Rec8/ScpA/Sccl, kleisin family

8 L25-Gammaproteobacteria

8.1 Taxa

The taxonomy of each organism containing a putative L25-Gammaproteobacteria RNA is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” might hypothetically represent two distinct RNAs in *E. coli*). The abbreviations will be used to identify each individual L25-Gammaproteobacteria RNA in Sections ?? and 8.2:.

8.2 Multiple-sequence alignment

Each L25-Gammaproteobacteria RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 8.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L25-Gammaproteobacteria RNA itself is denoted by the line underneath marked 5’ and 3’ on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-

Crick or G-U pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%, red circle (◉): nucleotide is present 97% of the time, black circle (◐): 90%, gray circle (◑): 75%, white circle (◒): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Aap-1-1, Aap-2-1, Aap-3-1, Aap-4-1, Ase-1-1, CRe-1-1, Cam-1-1, Cam-1-2, Cam-1-3, Cbr-1-1, Cbr-1-2, Cbr-1-3, Cbr-1-4, Cbr-1-6, Cdu-1-1, Cdu-4-1, Cdu-5-1, Cfr-1-1, Cfr-1-2, Cfr-1-3, Cfr-10-1, Cfr-11-1, Cfr-2-1, Cfr-2-2, Cfr-3-1, Cfr-5-1, Cfr-6-1, Cfr-7-1, Cfr-8-1, Cfr-9-1, Cko-1-1, Cko-2-1, Cma-1-2, Cma-1-3, Cma-1-4, Cma-2-1, Cma-3-1, Cma-5-1, Cro-1-1, Cro-3-1, Csa-1-1, Csa-11-1, Csa-13-1, Csa-14-1, Csa-16-1, Csa-2-1, Csa-3-1, Csa-4-1, Csa-5-1, Csa-6-1, Csa-8-1, Csa-9-1, Csp-1-1, Csp-10-1, Csp-12-1, Csp-14-1, Csp-15-1, Csp-16-1, Csp-19-1, Csp-2-1, Csp-3-1, Csp-4-1, Csp-5-1, Csp-6-1, Csp-7-1, Csp-8-1, Csp-9-1, Ctu-1-1, Ctu-2-1, Ctu-4-1, Cun-1-2, Cyo-1-1, Dch-1-2, Dch-2-1, Dda-4-1, Ddi-1-1, Ddi-2-1, Ddi-4-1, Dso-1-1, Dso-2-1, Dso-3-1, Dso-5-1, Dso-6-1, Dsp-4-1, Dsp-6-1, Dsp-7-1, Dsp-8-1, Dze-3-1, Eae-1-1, Eae-2-1, Eae-3-1, Eal-1-1, Eal-3-1, Eal-4-1, Eal-5-1, Eam-11-1, Eam-12-1, Eam-13-1, Eam-14-1, Eam-2-1, Eam-3-1, Eam-4-1, Eam-5-1, Eam-6-1, Eam-7-1, Eam-8-1, Eam-9-1, Ean-1-1, Ean-2-1, Ean-3-1, Ean-4-1, Eas-1-1, Eas-1-2, Eas-2-1, Eas-3-1, Eba-1-1, Eba-3-1, Eba-5-1, Eca-2-1, Eca-3-1, Ecl-1-1, Ecl-1-10, Ecl-1-11, Ecl-1-12, Ecl-1-2, Ecl-1-3, Ecl-1-4, Ecl-1-5, Ecl-1-6, Ecl-1-7, Ecl-1-8, Ecl-1-9, Ecl-10-1, Ecl-11-1, Ecl-12-1, Ecl-13-1, Ecl-15-1, Ecl-17-1, Ecl-18-1, Ecl-19-1, Ecl-2-1, Ecl-20-1, Ecl-21-1, Ecl-22-1, Ecl-23-1, Ecl-24-1, Ecl-25-1, Ecl-26-1, Ecl-27-1, Ecl-28-1, Ecl-28-2, Ecl-28-3, Ecl-28-4, Ecl-28-5, Ecl-28-6, Ecl-3-1, Ecl-30-1, Ecl-31-1, Ecl-32-1, Ecl-35-1, Ecl-36-1, Ecl-38-1, Ecl-4-1, Ecl-40-1, Ecl-41-1, Ecl-43-1, Ecl-44-1, Ecl-46-1, Ecl-47-1, Ecl-48-1, Ecl-49-1, Ecl-5-1, Ecl-50-1, Ecl-52-2, Ecl-52-4, Ecl-52-5, Ecl-53-1, Ecl-55-1, Ecl-56-1, Ecl-57-1, Ecl-6-1, Ecl-61-1, Ecl-62-1, Ecl-63-1, Ecl-64-1, Ecl-65-1, Ecl-66-1, Ecl-67-1, Ecl-68-1, Ecl-69-1, Ecl-7-1, Ecl-70-1, Ecl-8-1, Ecl-9-1, Eco-1-1, Eco-1-2, Eco-1-3, Eco-1-4, Eco-10-1, Eco-100-1, Eco-1000-1, Eco-1001-1, Eco-1002-1, Eco-1003-1, Eco-1004-1, Eco-1005-1, Eco-1006-1, Eco-1007-1, Eco-1008-1, Eco-1009-1, Eco-101-1, Eco-1010-1, Eco-1011-1, Eco-1012-1, Eco-1013-1, Eco-1014-1, Eco-1015-1, Eco-1016-1, Eco-1017-1, Eco-1018-1, Eco-1019-1, Eco-102-1, Eco-1020-1, Eco-1021-1, Eco-1021-2, Eco-1021-3, Eco-1022-1, Eco-1023-1, Eco-1024-1, Eco-1025-1, Eco-1026-1, Eco-1027-1, Eco-1028-1, Eco-1029-1, Eco-103-1, Eco-1030-1, Eco-1031-1, Eco-1032-1, Eco-1033-1, Eco-1034-1, Eco-1035-1, Eco-1036-1, Eco-1037-1, Eco-1038-1, Eco-1039-1, Eco-104-1, Eco-1040-1, Eco-1041-1, Eco-1042-1, Eco-1043-1, Eco-1044-1, Eco-1045-1, Eco-1046-1, Eco-1047-1, Eco-1048-1, Eco-1049-1, Eco-105-1, Eco-1050-1, Eco-1051-1, Eco-1052-1, Eco-1053-1, Eco-1054-1, Eco-1055-1, Eco-1056-1, Eco-1057-1, Eco-1058-1, Eco-1059-1, Eco-106-1, Eco-1060-1, Eco-1061-1, Eco-1062-1, Eco-1063-1, Eco-1064-1, Eco-1065-1, Eco-1066-1, Eco-1067-1, Eco-1068-1, Eco-1069-1, Eco-107-1, Eco-1070-1, Eco-1071-1, Eco-1072-1, Eco-1073-1, Eco-1074-1, Eco-1075-1, Eco-1076-1, Eco-1077-1, Eco-1078-1, Eco-1079-1, Eco-108-1, Eco-1080-1, Eco-1081-1, Eco-1082-1, Eco-1083-1, Eco-1085-1, Eco-1086-1, Eco-1087-1, Eco-1088-1, Eco-1089-1, Eco-109-1, Eco-1090-1, Eco-1091-1, Eco-1092-1, Eco-1093-1, Eco-1094-1, Eco-1095-1, Eco-1096-1, Eco-1097-1, Eco-1098-1, Eco-1099-1, Eco-11-1, Eco-110-1, Eco-1100-1, Eco-1101-1, Eco-1102-1, Eco-1103-1, Eco-1103-2, Eco-1104-1, Eco-1105-1,

9.2 Gene contexts

Each L31-Actinobacteria RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L31-Actinobacteria RNA are assigned a color; other domains are gray. Information about these con-

served domains is given in Section 9.3. The accession of the sequence containing each L31-Actinobacteria RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other accession refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L31-Actinobacteria RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 9.1.

9.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 9.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one L31-

cd01128 (1) Transcription termination factor rho is a bacterial ATP-dependent RNA/DNA helicase.

cd01282 (1) Helix-Turn-Helix DNA binding domain of putative transcription regulators from the MerR superfamily.

cd02028 (1) Uridine monophosphate kinase-like (UMPkin-like) is a family of proteins highly similar to the uridine monophosphate kinase (UMPK, EC 2).

cd04601 (1) This cd contains two tandem repeats of the cystathionine beta-synthase (CBS pair) domains in the inosine 5' monophosphate dehydrogenase (IMPDH) protein.

cd06199 (1) Cytochrome p450-like alpha subunits of E.

cd06853 (363) This subfamily contains Escherichia coli WecA, Bacillus subtilis TagO and related proteins.

cd16344 (1) low molecular weight protein arginine phosphatase.

COG0009 (410) tRNA A37 threonylcarbamoyladenine synthetase subunit TsaC/SUA5/YrdC [Translation, ribosomal structure and biogenesis]

COG0055 (7) FoF1-type ATP synthase, beta subunit [Energy production and conversion]

COG0056 (13) FoF1-type ATP synthase, alpha subunit [Energy production and conversion]

COG0119 (18) Glycine/serine hydroxymethyltransferase [Amino acid transport and metabolism]

COG0216 (536) Protein chain release factor A [Translation, ribosomal structure and biogenesis]

COG0224 (3) FoF1-type ATP synthase, gamma subunit [Energy production and conversion]

COG0254 (1) Ribosomal protein L31 [Translation, ribosomal structure and biogenesis]

COG0394 (28) Protein-tyrosine-phosphatase [Signal transduction mechanisms]

COG0412 (4) Dienelactone hydrolase [Secondary metabolites biosynthesis, transport and catabolism]

COG0472 (2) UDP-N-acetylmuramyl pentapeptide phosphotransferase/UDP-N-acetylglucosamine-1-phosphate transferase [Cell wall/membrane/envelope biogenesis]

COG0596 (1) Pimeloyl-ACP methyl ester carboxylesterase [Coenzyme transport and metabolism, General function prediction only]

COG0636 (14) FoF1-type ATP synthase, membrane subunit c/Archaeal/vacuolar-type H⁺-ATPase, subunit K [Energy production and conversion]

COG0711 (14) FoF1-type ATP synthase, membrane subunit b or b' [Energy production and conversion]

COG0712 (8) FoF1-type ATP synthase, delta subunit [Energy production and conversion]

COG1118 (3) L-asparagine transporter and related permeases [Amino acid transport and

metabolism]

COG1186 (1) Protein chain release factor B [Translation, ribosomal structure and biogenesis]

COG1238 (1) Uncharacterized membrane protein YqaA, SNARE-associated domain [Function unknown]

COG1249 (5) Pyruvate/2-oxoglutarate dehydrogenase complex, dihydrolipoamide dehydrogenase (E3) component or related enzyme [Energy production and conversion]

COG1409 (1) 3',5'-cyclic AMP phosphodiesterase CpdA [Signal transduction mechanisms]

COG1472 (2) Periplasmic beta-glucosidase and related glycosidases [Carbohydrate transport and metabolism]

COG1506 (1) Dipeptidyl aminopeptidase/acylaminoacyl peptidase [Amino acid transport and metabolism]

COG1598 (1) Predicted nuclease of the RNase H fold, HicB family [Defense mechanisms]

COG2020 (1) Protein-S-isoprenylcysteine O-methyltransferase Ste14 [Posttranslational modification, protein turnover, chaperones]

COG2197 (2) DNA-binding response regulator, NarL/FixJ family, contains REC and HTH domains [Signal transduction mechanisms, Transcription]

COG2890 (456) Methylase of polypeptide chain release factors [Translation, ribosomal structure and biogenesis]

COG4395 (1) Predicted lipid-binding transport protein, Tim44 family [Lipid transport and metabolism]

COG4586 (8) FoF1-type ATP synthase assembly protein I [Energy production and conversion]

pfam00119 (18) ATP synthase A chain.

pfam00213 (6) ATP synthase delta (OSCP) subunit.

pfam00231 (10) ATP synthase.

pfam00472 (24) RF-1 domain.

pfam00478 (2) IMP dehydrogenase / GMP reductase domain.

pfam00571 (2) CBS domain.

pfam01197 (1795) Ribosomal protein L31.

pfam02874 (1) ATP synthase alpha/beta family, beta-barrel domain.

pfam03462 (49) PCRFB domain.

pfam03816 (4) Cell envelope-related transcriptional attenuator domain.

pfam04775 (5) Acyl-CoA thioester hydrolase/BAAT N-terminal region.

pfam05534 (1) HicB family.

- pfam07690 (1) Major Facilitator Superfamily.
 pfam08840 (5) BAAT / Acyl-CoA thioester hydrolase C terminal.
 pfam09335 (1) SNARE associated Golgi protein.
 pfam09527 (5) Putative F0F1-ATPase subunit Ca²⁺/Mg²⁺ transporter.
 pfam09851 (7) Short C-terminal domain.
 pfam13520 (3) Amino acid permease.
 pfam13649 (2) Methyltransferase domain.
 pfam14330 (1) Domain of unknown function (DUF4387).
 pfam16326 (5) ABC transporter C-terminal domain.
 PHA03169 (1) hypothetical protein; Provisional
 PRK00001 (18) serine hydroxymethyltransferase; Reviewed
 PRK00019 (1795) 50S ribosomal protein L31; Reviewed
 PRK00108 (68) phospho-N-acetylmuramoyl-pentapeptide-transferase; Provisional
 PRK00528 (3) 50S ribosomal protein L31; Reviewed
 PRK00591 (571) peptide chain release factor 1; Validated
 PRK01678 (4) 50S ribosomal protein L31 type B; Reviewed
 PRK05567 (1) inosine 5'-monophosphate dehydrogenase; Reviewed
 PRK05621 (13) F0F1 ATP synthase subunit gamma; Validated
 PRK05759 (14) F0F1 ATP synthase subunit B; Validated
 PRK05815 (18) F0F1 ATP synthase subunit A; Validated
 PRK06214 (1) sulfite reductase; Provisional
 PRK06876 (4) F0F1 ATP synthase subunit C; Validated
 PRK07764 (1) DNA polymerase III subunits gamma and tau; Validated
 PRK07818 (5) dihydrolipoamide dehydrogenase; Reviewed
 PRK07874 (10) F0F1 ATP synthase subunit C; Validated
 PRK08279 (1) long-chain-acyl-CoA synthetase; Validated
 PRK09280 (7) F0F1 ATP synthase subunit beta; Validated
 PRK09281 (14) F0F1 ATP synthase subunit alpha; Validated
 PRK09328 (452) N5-glutamine S-adenosyl-L-methionine-dependent methyltransferase; Provisional
 PRK09376 (1) transcription termination factor Rho; Provisional
 PRK10959 (1) outer membrane protein W; Provisional
 PRK11391 (26) phosphotyrosine-protein phosphatase; Provisional
 PRK13430 (14) F0F1 ATP synthase subunit delta; Provisional
 PRK15098 (2) beta-D-glucoside glucohydrolase; Provisional
 PRK15119 (4) undecaprenyl-phosphate alpha-N-acetylglucosaminyl 1-phosphate transferase; Provisional
 smart00116 (2) Domain in cystathionine beta-synthase and other proteins.
 smart00226 (3) Low molecular weight phosphatase family.
 smart00421 (2) helix_turn_helix, Lux Regulon.
 smart00422 (1) helix_turn_helix, mercury resistance.
 smart00937 (12) This domain is found in peptide chain release factors.
 TIGR00057 (410) tRNA threonylcarbamoyl adenosine modification protein, Sua5/YciO/YrdC/YwlC family. [Protein synthesis, tRNA and rRNA base modification]
 TIGR00350 (4) cell envelope-related function transcriptional attenuator common domain. [Regulatory functions, Other]
 TIGR00711 (1) drug resistance transporter, EmrB/QacA subfamily. [Cellular processes, Toxin production and resistance, Transport and binding proteins, Other]
 TIGR02380 (291) undecaprenyl-phosphate alpha-N-acetylglucosaminyl 1-phosphatetransferase. [Cell envelope, Biosynthesis and degradation of surface polysaccharides and lipopolysaccharides]
 TIGR03025 (1) exopolysaccharide biosynthesis polyprenyl glycosylphosphotransferase.
 TIGR03534 (2) protein-(glutamine-N5) methyltransferase, release factor-specific. [LIV]PRx[DE]TE (in Escherichia coli, IPRPDTE) confers specificity for the release factors rather than for ribosomal protein L3. [Protein fate, Protein modification and repair]
 TIGR03695 (1) 2-succinyl-6-hydroxy-2,4-cyclohexadiene-1-carboxylate synthase. [Biosynthesis of cofactors, prosthetic groups, and carriers, Menaquinone and ubiquinone]
 TIGR04211 (1) SH3 domain protein.
 TIGR04360 (3) conjugative transfer region protein TrbK. [Mobile and extrachromosomal element functions, Plasmid functions]

9.4 Multiple-sequence alignment

Each L31-Actinobacteria RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 9.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L31-Actinobacteria RNA itself is denoted by the line underneath marked 5' and 3' on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-Crick or G-U

pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%, red circle (◉): nucleotide is present 97% of the time, black circle (◐): 90%, gray circle (◑): 75%, white circle (◒): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Aac-1-1, Acy-2-1, Ade-2-1, Age-1-1, Ama-1-1, Ama-2-1, Ame-1-1, Ame-2-1, Ame-2-2, Ame-4-1, Ame-5-1, Ame-5-2, Ane-1-1, Ava-1-1, Bas-2-1, Bas-3-1, Bbo-1-1, Bbo-2-2, Bco-2-1, Blo-1-1, Blo-10-1, Blo-11-1, Blo-12-1, Blo-13-1, Blo-14-1, Blo-15-1, 10 L31-Coriobacteria

10.1 Taxa

The taxonomy of each organism containing a putative L31-Coriobacteria RNA will be used to identify each individual L31-Coriobacteria RNA in Sections 10.2 is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” and 10.4: might hypothetically represent two distinct RNAs in *E. coli*). The abbreviations

abbrev. of hits	taxonomy of species

env-1 to env-259	environmental samples	

10.2 Gene contexts

Each L31-Coriobacteria RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L31-Coriobacteria RNA are assigned a color; other domains are gray. Information about these con-

served domains is given in Section 10.3. The accession of the sequence containing each L31-Coriobacteria RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other accession refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L31-Coriobacteria RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 10.1.

10.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 10.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one L31-

Coriobacteria RNA are assigned a color, while others are shown in gray. The number in parentheses after the colored domain name is the number of occurrences in Section 10.2.

cd00009 (1) The AAA+ (ATPases Associated with a wide variety of cellular Activities) superfamily represents an ancient group of ATPases belonging to the ASCE (for additional strand, catalytic E) division of the P-loop NTPase fold.

COG1670 (1) Protein N-acetyltransferase, RimJ/RimL family [Translation, ribosomal structure and biogenesis, Posttranslational modification, protein turnover, chaperones]

COG4932 (1) Uncharacterized surface anchored protein [Function unknown]

pfam01197 (277) Ribosomal protein L31.

pfam02371 (1) Transposase IS116/IS110/IS902 family.

pfam13302 (1) Acetyltransferase (GNAT) domain.

pfam17210 (1) SdrD B-like domain.

PRK00019 (276) 50S ribosomal protein L31; Reviewed

10.4 Multiple-sequence alignment

Each L31-Coriobacteria RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 10.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L31-Coriobacteria RNA itself is denoted by the line underneath marked 5′ and 3′ on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-Crick or G-U

pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%, red circle (◉): nucleotide is present 97% of the time, black circle (◐): 90%, gray circle (◑): 75%, white circle (○): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Aeq-1-1, Apa-1-1, Apa-2-1, Ari-1-1, Asp-1-1, Asp-2-1, Asp-4-1, Asp-5-1, Ava-1-1, Ava-1-2, Ava-2-1, Cae-1-1, Cin-1-1, Csp-1-1, Csp-2-1, Cst-1-1, Cta-1-1, Ele-1-1, Ele-2-1, Esp-1-1, Esp-2-1, Oul-2-1, Ssp-1-1, env-10, env-100, env-101, env-102, env-103, env-104, env-105, env-106, env-107, env-108, env-109, env-11, env-110, env-111, env-112, env-113, env-117, env-118, env-119, env-12, env-120, env-121, env-122, env-123, env-124, env-125, env-126, env-127, env-128, env-129, env-13, env-130, env-131, env-132, env-133, env-134, env-135, env-136, env-137, env-138, env-139, env-140, env-141, env-142, env-143, env-144, env-145, env-146, env-147, env-148, env-149, env-150, env-151, env-152, env-153, env-154, env-155, env-156, env-157, env-158, env-159, env-160, env-161, env-162, env-163, env-164, env-165, env-166, env-167, env-168, env-169, env-170, env-171, env-172, env-173, env-174, env-175, env-176, env-177, env-178, env-179, env-18, env-180, env-181, env-182, env-183, env-184, env-185, env-187, env-188, env-19, env-193, env-194, env-195, env-197, env-199, env-20, env-203, env-204, env-205, env-208, env-21, env-210, env-215, env-219, env-22, env-226, env-227, env-228, env-229, env-23, env-230, env-231, env-232, env-233, env-239, env-24, env-241, env-242, env-243, env-244, env-245, env-249, env-25, env-252, env-253, env-254, env-255, env-258, env-26, env-27, env-28, env-29, env-30, env-31, env-32, env-33, env-34, env-35, env-36, env-37, env-38, env-39, env-40, env-41, env-42, env-43, env-44, env-45, env-46, env-47, env-48, env-49, env-5, env-50, env-51, env-52, env-53, env-54, env-55, env-56, env-57, env-58, env-59, env-6, env-60, env-61, env-62, env-63, env-65, env-66, env-67, env-68, env-69, env-70, env-71, env-72, env-73, env-74, env-75, env-76, env-77, env-78, env-79, env-84, env-85, env-86, env-87, env-88, env-89, env-90, env-91, env-92, env-93, env-94, env-95, env-96, env-97, env-98, env-99

11 L31-Firmicutes

11.1 Taxa

The taxonomy of each organism containing a putative L31-Firmicutes RNA is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” is listed, with abbreviations identifying each hit (e.g., “Eco-1-1” and “Eco-1-2” might hypothetically represent two distinct RNAs in *E. coli*). The abbreviations will be used to identify each individual L31-Firmicutes RNA in Sections 11.3 and 11.5:.
